This looseness of the marriage bond, as was naturally to be expected, had its effect on the other family relations. The obligation of a father to provide for his children began to be lightly esteemed. The law—possibly only the interpretation put upon the *uti legassit* of the XII Tables—had empowered him testamentarily to disinherit them, or in instituting them to limit their right to a mere fraction of the inheritance; but it was assumed that this power would be exercised with discretion and only when justified by circumstances. But in the latter days of the republic, amid the slackened ties of domestic life, paternal as well as conjugal duty seems to have often been lost sight of, and children disinherited or cut off with a nominal share of the inheritance in order that a stranger might be enriched. This led to the introduction by the centumviral court, without any legislative enactment or prætor's edict to warrant it, of what was called the *querela inofficiosi testamenti*,—challenge of a testament by a child whose natural claims had been capriciously and causelessly disregarded. While the practice may for a time have been hesitating and uncertain, yet before long, through means of this *querela*, the rule came to be established that every child was entitled, notwithstanding the terms of his father's testament, to at least a fourth (*portio legitima*, *quarta legitima*, the legitim of the law of Scotland and various Continental countries) of what would have come to him had his parent died intestate, unless it appeared that the latter had had adequate grounds for excluding him or limiting him to a smaller share. A parent might in like manner challenge an undutiful testament made by his child to his prejudice; and in certain cases so might brothers and sisters *inter se*.

The decline of morals had an equally marked effect on the transactions of daily life, calling for precautions and remedies that had not been found requisite in the hey-day of the *πίστις τῶν Ῥωμαίων*. Men no longer relied on each other's good faith unless backed by stipulations, cautions (*cautiones*), and guarantees. The Rutilian bankruptcy arrangements and the *actio Pauliana* for setting aside alienations in fraud of creditors indicate a laxity in mercantile dealings that was perhaps an inevitable consequence of the growth of trade and commerce. But, that such remedies as, for example, the *exceptio rei venditæ et traditæ* or the *exceptio non numeratæ pecuniæ* should have been found necessary—the one an answer to a vendor (with the price in his pocket) who attempted to dispossess his vendee because some of the formalities of conveyance had been neglected, the other an answer to an action on a bond for repayment of money that by some accident had never been advanced—proves that the law had now to encounter fraud in all directions, and that *Græca fides* had to a great extent displaced the old Roman probity.

II. FACTORS OF THE LAW.

Legislation.—It cannot be said that during the period of nearly Legislation.—It cannot be said that during the period of nearly two centuries and a half embraced within the present chapter the

private law owed much to legislation. The vast majority of the enactments of the time referred to by the historians dealt with constitutional questions, municipal and colonial government, agrarian arrangements, fiscal policy, sumptuary prohibitions, criminal and police regulations, and other matters that affected the public law rather than the private. Those of the latter class mentioned by Gaius and Ulpian in their institutional works barely exceed a score in number; and of these not above half a dozen can be said to have exercised a permanent influence on the principles (as distinguished from the details) of the law. Most of them were enactments of the *concilium plebis* or of the *comitia* of the tribes, to which ordinary legislation had passed as more readily convened and more easily worked than the *comitia* of the centuries.

*Edicts of the Magistrates.*¹—The practice of propounding edicts Magistrates—The practice of propounding edicts Magistrates' was very ancient, and had been followed by kings and consuls long before the institution of the prætorship. It was one of the most edicts. obvious ways of exercising the *imperium* with which the supreme magistrate was invested,—to lay an injunction upon a citizen and enforce his obedience, or to confer upon him some advantage and maintain him in its enjoyment. It was one of the ways in which public order was protected where there had been no invasion of what the law regarded as a right, and where, consequently, there was no remedy by action. That the earlier edicts of the prætors were of this character—issued, that is to say, with reference to particular cases, and what afterwards came to be called *edicta repentina* or *prout res incidit posita*—there is little reason to doubt. In time a new class of edicts appeared which got the name of *edicta perpetua* (or *perpetuæ jurisdictionis causa proposita*),—announcements by the prætor, published on his album (as the white boards displayed for the purpose in the forum were called), of the relief he would be prepared to grant on the application of any one alleging that the state of facts contemplated had arisen. The next year's prætor was free to adopt the edicts of his predecessor or not; but it was usual for him to do so if they had been found beneficial in practice, he adding to them new provisions suggested by demands made upon past prætors for *edicta repentina* but which they had not generalized, or even proposing for acceptance some remedy entirely of his own devising. As each new prætor entered upon office he announced his jurisdictional programme,—his *lex annua*, as it was called from this particular point of view, by far the greater part of it *tralatitium*, i.e., transmitted from his predecessors, and only a few paragraphs, diminishing in number as time progressed, representing his own contribution. And so it went on in the first years of the empire, until the prætorian function was eclipsed by the imperial; and at last, after having, by instruction of Hadrian, been subjected to revision, and consolidated with the edicts of the peregrin prætors and provincial governors, it was sanctioned as statute law for the empire through the medium of a *senatusconsultum*.

There is some reason for supposing that the edict attained considerable proportions in the time of Cicero; for he mentions that, whereas in his youth the XII Tables had been taught to the boys in school, in his later years these were neglected, and young men directed instead to the prætor's edicts for their first lessons in law. Of a few of them the date and authorship are known with tolerable precision; but of the history of the majority, including some of the most important, such as those introducing *restitutio in integrum* on the ground of lesion through error, absence, minority, and the like, and those revolutionizing the law of succession, we are to a great extent in the dark. It is not necessary to assume either that the Julian consolidation exhibits all the provisions that from first to last appeared on the album, or that those preserved in it were originally in the shape in which they are there presented. It is much more likely that we have in it only those that had stood the test of generations, and that many of them are the result of the combined wisdom and experience of a series of prætors. It was one of the great advantages the edicts had over legislative enactments that they might be dropped, resumed, or amended by a new prætor according to his judgment of public requirements. For the edict was *viva vox juris civilis*,—intended to aid, supplement, and correct it in accordance with the ever-changing estimate of public necessities; and this would have been impossible had its provisions from the first been as stereotyped as they became by the consolidation in the time of Hadrian.

The *Edictum* seems to have contained two parts,—the first what may be called the edict or edicts proper, and the second an appendix of styles of actions, &c., whether derived from the *jus civile* or from the *jus prætorium*. The contents of the edict proper were in detail very various, but all devoted to an exposition of the ways in which the prætor meant to exercise his jurisdiction during his year

¹ See Lenel, *Beiträge zur Kunde des prætorischen Edicts*, Stuttgart, 1878, and the introductory chapters in his *Das Edictum Perpetuum*, Leipzig, 1883; Karlowa, *Röm. Rechtsgesch.*, § 60.

of office. They were not didactic or dogmatic formulations of law, but rather announcements or advertisements of what remedy he would grant in such and such circumstances, or direct orders to do or prohibitions against doing certain things. A party claiming an action or whatever else it might be under any of them did so not of right, as he would have done had his claim had a statutory or customary foundation, but of grace,—on the strength of the prætor's promise to grant him what he claimed and make the grant effectual. That was why originally such an action had to be raised and concluded within the particular prætor's year of office,—a rule which in time, by abuse, was converted into the somewhat different one that a purely prætorian action (*i.e.*, not originally of the *jus civile*, even though remodelled and regulated by the prætor) had to be raised within a year of the occurrence to which it referred.

As already observed, the prætors' edicts proceeded to a greater extent than the earlier legislation of the comitia upon lines of equity; that is to say, they set themselves against the strictness and formalism of the jurisprudence of the XII Tables. Such may be said to have been the general tendency of the edicts as a whole. But it was the tendency of the whole jurisprudence of the time, and by no means peculiar to the prætorian creation. Nowhere in the texts are the prætors spoken of as the mouthpieces of equity as distinguished from law. Such a distinction recurs frequently in Cicero; he identifies *æquitas* with the spirit of a law or agreement, and *jus* with its letter, but it is in order to sing the praises not of the prætors but of the pleaders who maintained the former as against the latter, and of the judges who were persuaded by their arguments. Much of what was contained in the *Edict* might quite as well have been embodied in statute, and we know that in time statute came to its aid; witness a very remarkable provision of it,—“I will give *bonorum possessio* as may be enjoined by statute, whether comitial enactment or *senatusconsultum*.”

Of the edicts of the peregrin prætor and their relation to that of his urban colleague little is known. That they differed in some respects there can be no doubt, for in the *Lex Rubria* (of 706?) for settling the government of Cisalpine Gaul the magistrates are directed, with reference to a certain action, to formulate it in the way prescribed in the edict of the peregrin prætor. The latter, therefore, must to some extent have been in advance of that of the urban prætor, probably in this respect, that, being prepared primarily for the regulation of questions affecting non-citizens, it more thoroughly than the other avoided formalities that were competent only to citizens, and thus to a greater extent simplified procedure. The edicts of the provincial governors must have varied according to circumstances, being in all cases composites of provisions, more or less numerous, borrowed from the edicts of the prætors and additions suggested by the peculiar wants of the different provinces for which they were framed (*provinciale genus edicendi*). As for those of the curule ædiles, who amongst other duties were charged with the supervision of markets, their range was very limited, their most important provisions having reference to open sales of slaves, horses, and cattle, and containing regulations about the duties of vendors exposing them, and their responsibility for latent faults and vices.

Consuetudinary law. *Consuetudo, Professional Jurisprudence, and Res Judicatae*.—Great

as may be the difficulty experienced by philosophical jurists in defining the ground of the authority of consuetudinary law, there is no room to dispute the importance of its contributions to every system of jurisprudence ancient and modern. The men who first drew, accepted, and endorsed a bill of exchange did as much for the law as any lawgiver has ever accomplished. They may or may not have acted on the advice of jurists; but, whether or not, they began a practice which grew into custom, and as such was recognized by the tribunals as a law-creating one,—one conferring rights and imposing obligations. There is much of this—far more probably than is commonly imagined—in the history of every system of law.

In Rome the process was sometimes wonderfully expeditious; witness what Justinian narrates of the introduction and recognition of testamentary trusts and of codicils to last wills, both in the time of Augustus. It can hardly be doubted that the literal contract *per expensilationem* originated in the same way, probably in the end of the 5th or the beginning of the 6th century. The keeping of domestic account-books may have been enjoined and enforced by the censors; but it was custom, and neither statute nor prætor's edict, that made an entry in them to another person's debit creative of a claim against the latter for *certa pecunia credita*, that might be made effectual by an action under the Silian law. It must have been in exactly the same way that *mutuum*, formless loan of money, came to be regarded as the third variety of *certa credita pecunia*, and to be held recoverable under the same action. True, this could not have been attained without the co-operation of the courts. But then those courts were composed each of a single private citizen, whose office ended with his judgment in the particular case remitted to him, and who was untrammelled by the authority of any *series rerum judicatorum*.¹ He had simply to decide whether in his view

expensilation or formless loan created such an obligation as was covered by the words *pecuniam dari oportere*. There may for a time have been a divergent practice, contradictory findings, as Cicero says there were in his day upon the question whether *æquitas* or *jus strictum* was to be applied to the determination of certain matters; but the gradual ascendancy and eventual unanimity of judicial opinion in the affirmative was but the expression of the general sentiment of the citizens, of whom the *judices* were the representatives.

These are but examples of the way in which consuetudinary law was constructed. It required the combined action of the laity and the *judices*, both at times acting under professional advice; in some cases even that of the prætors was necessary. It would have been impossible, for instance, to have introduced the consensual contracts into the Roman system and determined what were the obligations they imposed on either side, without magisterial co-operation in framing the *formulae* that were to be submitted to the judges. Taking the action on sale as an illustration, the formula substantially was this:—“It being averred that the defendant sold such or such a thing to the plaintiff, whatever, judge, it shall appear that the defendant ought in good faith to give to or do for the plaintiff in respect thereof, in the money equivalent thereof condemn the defendant; otherwise, acquit him.” It is very manifest that the free hand here given to the judge must immensely have facilitated the reception of customary doctrine into the law. The judge was to a great extent the spokesman of the forum; his judgment was formed in accordance with current public opinion, which he had ample opportunity of gauging; it was the reflexion of that general sentiment of right, which, phrase it how we may, is the real basis of all customary law. And so in an action for establishing a right of property in a *res nec mancipi*. The formula was very simple:—“If it appear that such or such a thing belongs to the plaintiff in quiritary right, then, judge, whatever be its value for the plaintiff, in that condemn the defendant; should it appear otherwise, acquit him.” The primary duty of a judge on such a remit was to determine whether the title on which the plaintiff founded his pretensions gave him a right that came up to property; and it can hardly be disputed that it was by the decisions of a series of judges, in a series of such actions, that the long list of natural modes of acquiring property given by Justinian under technical names was gradually brought into view. Those decisions, whether upon the obligations of a vendor, direct or indirect, or upon the sufficiency of a title founded on by a party averring a right of property by natural acquisition, may in many cases have been arrived at under professional advice, and were in all cases embodied in judgments. But that does not in the least deprive the doctrine deduced from them of its character of customary law. It was not until the empire that the opinions of the jurists submitted to a judge (*responsa prudentium*, see p. 705) were invested with quasi-legislative authority. During the republic, if a judge deferred to them, it was simply because he regarded them as in consonance with well-qualified public opinion; and what a series of consistent judgments of *this sort* built up was in the strictest sense a law based on consuetude.²

As regards the professional jurists in particular it has already been observed that, according to the testimony of the historians, the law was a monopoly of the patricians down at least to the jurisprudence of the 5th century of the city. Livy goes so far as to denounce the secrets of the pontifical college. It was so to a very great extent in the regal period. But after the publication of the XII Tables this could be the case only in a qualified sense, the pontiffs becoming the official interpreters of that which in the letter was patent to the world. The *Jus Flavianum*, with its formulary of actions, in the year 450, the practice of giving advice in law in public adopted by Tib. Coruncanus in the beginning of the 6th century, and the *Jus Ælianum*, embodying the current *interpretatio*, some fifty years later, put an end not only to pontifical but to patrician monopoly. From this time onwards there was a series of jurists (*prudentes*), gradually increasing in number and eminence, of whom a list is given by Pomponius, and many of whom are signalized by Cicero, particularly in his *Orator* and *Brutus*. They occupied themselves in giving advice to clients (see PATRON AND CLIENT, vol. xviii. p. 412), teaching, pleading at the bar, framing styles of contracts, testaments, and various other deeds of a legal character, or writing commentaries or shorter treatises on different branches of the law.³

lie a judge was much freer, and not only entitled but bound to decide according to his own notion of what was right, taking the risk of consequences if his judgment was knowingly contrary to law.

² The doctrines of the classical jurists as to the necessity of *longa, inveterata consuetudo*, and so forth, had no application to the formative jurisprudence of the republic, and in fact refer not to general consuetude but to particular custom when founded on in derogation of the common law.

³ Rudorff, *Röm. Rechtsgeschichte*, vol. i. §§ 62-65; Sanio, *Zur Geschichte der röm. Rechtswissenschaft*, Königsberg, 1858; Grellet-Dumazeau, *Études sur le barreau Romain*, 2d ed., Paris, 1858; Danz, *Gesch. d. röm. Rechts*, vol. i. § 49; Karlowa, *Röm. Rechtsgesch.*, § 61.

¹ It was not until the empire that a “series rerum perpetuo similiter judicatarum,” a uniform series of precedents, was held to be law. During the republic

III. SUBSTANTIVE CHANGES IN THE LAW DURING THE PERIOD.

Publician edict. *The Publician Edict.*—There were necessarily many changes during the period in the law of property and of minor real rights, several of them of no mean importance. But the greatest of all was that effected by the Publician edict,¹ indirectly recognizing the validity (1) of what Theophilus calls *dominium bonitarium* as an actual though inferior ownership of *res Mancipi*, and (2) of what got the name of *bonae fidei possessio* as a fictitious ownership of either *res Mancipi* or *res nec Mancipi*, valid against all the world except the true *dominus*. The accounts we possess of this edict are somewhat inconsistent and even contradictory; the explanation may be that it went through a process of amendment and expansion at the hands of successive prætors, and that eventually it may have had more than one section, without our always being able to say to which of them the criticism of a particular commentator is directed. But there is no doubt of its general tendency,—of the defects it was meant to correct and of the way in which the correction was accomplished.

Domini-um boni-tarium. One of the defects was this: if a man had taken a transfer of a *res Mancipi* from its rightful owner, but simply by tradition instead of by mancipation or cession in court, he did not acquire *dominium ex jure Quiritium*, and the transferee remained undivested. The result was that the latter was in law entitled to raise a *rei vindicatio* and oust the transferee whose money he might have in his pocket, while if a third party had obtained possession of the thing, but in such a way as not to be amenable to an interdict, the transferee could have no effectual vindication against him, as he was not in a position to prove *dominium ex jure Quiritium*. The first difficulty was overcome by the *exceptio rei venditæ et traditæ*, also a prætorian remedy, and probably older than the Publician; to the transferor's vindication on the strength of his unextinguished quiritary right the transferee pleaded sale and delivery as an effectual prætorian defence. But, when a third party was in possession, and the transferee by simple delivery had to take the initiative, the position was more complicated. Such third party might be in perfect good faith; he might even have acquired from the original transferor and fortified his acquisition with a formal conveyance. But that was no sufficient reason in equity why he should be allowed to defeat the prior right of the original transferee, who, if he had possessed for the requisite period of usucapion before the third party came upon the scene, would have cured the defect of the informal delivery and acquired an unassailable quiritary right. So the prætor announced in his edict that, if a man came to him and represented that he had bought a *res Mancipi* from its owner, and had had it delivered to him, but had lost possession within the period of usucapion, he (the prætor) would allow him a vindication embodying a fiction of completed usucapion (*infra*, p. 708), with which he might proceed either against the transferor or any third party withholding the thing in question.

The publication of such an edict and the formula of the action based upon it—which, though of prætorian origin, was in many respects dealt with as an *actio juris civilis* and just a variety of the *rei vindicatio*—had the same effect as if the legislature had directly enacted that in future delivery of a *res Mancipi* in pursuance of a sale or other good cause would confer a right of ownership in it even before usucapion had been completed. Till completed, however, the transferee was not quiritary owner: the thing in question was only *in bonis*, “of his belongings,” and the legal title, though a very empty one—*nudum jus Quiritium*—remained in the transferor; it was only with the completion of the usucapion that it became the transferee's *pleno jure*. The inevitable result of the recognition of this tenure *in bonis* was that mancipation came to be regarded in many cases as an unnecessary formality; and the marvel is that it continued to hold its ground at all. The explanation may be that it afforded a substratum for and gave force of law to the *verba nuncupata* that accompanied the *negotium per aes et libram*; and, although many of these might quite well be thrown into the form of stipulations, yet there were others that it may have been thought safer to leave to take effect under the provisions of the earlier law.

Bonae fidei possessio. The second case that was met by the Publician edict—whether as originally published or by an amendment of it cannot be determined—was that of the *bona fide* transferee of a thing by purchase or other sufficient title who, having lost possession of it before usucapion, found to his cost that the transferor had not been its owner, that no ownership therefore had been transmitted to him (the transferee), and that consequently he was not in a position to raise a vindication with its averment of *dominium ex jure Quiritium*.² As against the true owner, whose property had been dis-

posed of by a stranger behind his back, there would have been no equity in giving him an action; but as against all the world except the true owner his “better right” was recognized by the prætor, who accorded to him also a vindication proceeding on a fiction of completed usucapion, for usucapion cured the defect of his title, just as it did that of the bonitarian owner. In this way the prætors introduced that *bonae fidei possessio* which was worked out with much skill by the jurists of the early empire, and which assumed very large proportions in the Justinian law when the term of prescription had been greatly extended, and the difficulty of proving property (as distinguished from *bona fide* possession) consequently very much increased.

*Development of the Law of Contract.*³—It is impossible within the limits of an article such as this to indicate a tithe of the amendments that were effected on the law of obligations during the period of whose distinguishing features were the rise of a *jus gentium* and tract. the construction of the prætor's edict. In every branch of it there was an advance not by steps but by strides,—in that of obligations arising from contract, of those arising from delict, and of those arising from facts and circumstances, such as unjustifiable enrichment at another person's cost.⁴ The law of suretyship, in its three forms of *sponsio*, *fidepromissio*, and *fidejussio*, received considerable attention, and formed the subject of a series of legislative enactments for limiting a surety's liability; while that of agency, which was sparingly admitted in Rome, had a valuable contribution from the prætorian edict in the recognition of a man's liability, more or less qualified, for the contractual debts of his *filiifamilias* and slaves, as also, and without qualification, for the debts properly contracted of persons, whether domestically subject to him or not, who were managing a business on his account, or whom he had placed in command of a ship belonging to him. The development of the law in the matter of obligations generally was greatly facilitated by the prætorian simplification of procedure and the introduction of new forms of actions,—the instruction to a judge, “Whatever in respect thereof the defendant ought to give to or do for the plaintiff, in that condemn him,” preceded by a statement of the cause of action, giving wide scope for the recognition of new sources of liability.

The origin of the verbal contract of stipulation and its action—Stipulatio—under the Silian and Calpurnian laws have already been explained (pp. 694, 684). It was theoretically a formal contract, *i. e.*, creative of obligation on the strength of the formal question and answer interchanged by the parties, even though no substantial ground of debt might underlie it; but in time it became the practice to introduce words—the single word *recte* was enough—excluding liability in case of malpractice (*clausula doli*); and finally even that became unnecessary when the prætors had introduced the general *exceptio doli*, pleadable as an equitable defence to any personal action. And it was essentially productive only of unilateral obligation, *i. e.*, the respondent in the interrogatory alone incurred liability; if mutual obligations were intended it was necessary that each should promise for his own part, with the result that two contracts were executed which were perfectly independent. Originally the only words that could be employed were *spondeo* on the one side, *spondeo* on the other; and in this form the contract was *juris civilis* and competent only to citizens (and non-citizens enjoying *commercium*?). In time the words *promittis* ? *promitto*, came to be used alternatively. They seem, eventually at least, to have been competent to peregrins as well as to citizens, although that may not have been until the stipulation had become of daily use amongst the former in the still simpler phraseology *dabis* ? *dabo*, *facies* ? *faciam*. Originally competent only for the creation of an obligation to pay a definite sum of money, and afterwards one for delivery of a specific thing other than money, the contract came in time, by the simplification of the words of interrogatory and response—the substitution of the conditions of the formular system for the *legis actiones* of the Silian and Calpurnian laws, and the introduction of the *actio ex stipulatu* to meet cases of indefinite promise—to be adaptable to any sort of unilateral engagement, whether initiated by it or only confirmed. It was of immense service too outside the ordinary range of contract in what were called necessary (in contradistinction to voluntary) stipulations, of which a variety of illustrations are given *infra*, p. 709. In all directions advantage was taken of it to bind a man by formal contract either to do or to refrain from doing what in many cases he might already be bound *ipso jure* to do or to abstain from doing, and that because of the simplicity of the remedy—an action on his stipulation—that would lie against him in the event of his failure.

A second form of contract that came into use to a considerable extent in the latter half of the republic is what is commonly called contract. the literal contract, or, as Gaius phrases it with greater accuracy,

¹ See Ribéreau, *Théorie de l'in bonis habere ou de la propriété prétorienne*, Paris, 1867; Voigt, *Jus naturale*, &c., vol. iv., App. xxi., p. 470 sq.; Huschke, *Das Recht der Publicianischen Klage*, Stuttgart, 1874; Schulin (rev. Huschke), in the *Krit. Vierteljahrsschrift*, vol. xviii. (1876), p. 526 sq.; Lenel, *Beiträge zur Kunde d. prætorischen Edicts*: I. Das Public. Ed., Stuttgart, 1878.

² This case is the only one alluded to by Justinian (*Instit.*, iv. 6, 4). He had abolished the distinction between quiritarian and bonitarian property, and so it was unnecessary for him to mention the other.

³ See Bekker, *Aktionen*, vol. i. chaps. 5-8, and App. D, E, F, and vol. ii. chaps. 16, 16; Voigt, *Jus naturale*, &c., vol. iii. §§ 106-124, and vol. iv., App. xix.

⁴ Such obligations—usually imposing the duty of restitution of unjustifiable gains—filled a considerable space in the practice and doctrine of the period, and early gave rise to a variety of brocards, *e.g.*, “Nemo cum alterius damno lucrari debet,” “Nemo damnum sentire debet per lucrum alterius,” &c.

the *nomen transcripticium*.¹ Notwithstanding the prolific literature of which it has been the subject, it must be admitted that in many points our knowledge of it is incomplete and uncertain. The prevalent opinion, formed before the discovery of the Verona MS. had made known Gaius's description of it, and almost universally adhered to ever since, is that such contracts were created by entries in the account-books which the censors insisted that all citizens of any means should keep with scrupulous regularity. They are often alluded to by the lay writers; but the text principally relied on is what remains of Cicero's speech for the player Roscius. From the tenor of the argument in that case, and incidental remarks elsewhere, the conclusion has been formed that a citizen who made an entry in his *codex*—whether of the nature of a cash-book or a ledger is much disputed—to the debit of another, thereby made the latter his debtor for a sum recoverable by an *actio certae creditae pecuniae*. Gaius in his description of the contract does not mention the *codices*; but his account is not inconsistent with the notion that the entries (*nomina*) of which he speaks were made in them. He says that those entries were of two sorts, *nomina arcaria* and *nomina transcripticia*. The former were entries of cash advances; and of them he observes that they did not create obligation, but only served as evidence of one already created by payment to and receipt of the money by the borrower. Of the latter he says that there were two varieties, the entry transcribed from thing to person and that transcribed from one person to another, and that both of them were not probative merely but creative of obligation. The first was effected by a creditor (A) entering to the debit of his debtor (B) the liquidated amount of what the latter was already owing as the price of something purchased, the rent of a house leased, the value of work done, or the like. The second was effected by A transcribing B's debt to the debit of a third party (C), hitherto a debtor of B's, and who consented to the transaction,—A at the same time crediting B with the sum thus booked against C, and B in his books both crediting C with it (*acceptilatio*) and debiting A (*expensilatio*).

All this at first sight seems just a series of bookkeeping operations. But it was much more than that for the Roman citizens who first had recourse to it. There was a time when sale, and lease, and the like, so long as they stood on their own merits, created no obligation enforceable at law, however much it might be binding as a duty to Fides or (as moderns would say) in the forum of conscience; to found an action it required to be clothed in some form approved by the *jus civile*. The *nexum* may have been one of those forms, the vendee or tenant being fictitiously dealt with as borrower of the price or rent due under his purchase or lease; the stipulation was another, the obligation to pay the price or rent being made legally binding by its embodiment in formal question and answer. But stipulation was competent only between persons who were face to face, whereas *expensilatio* was competent also as between persons at a distance from each other. This of itself gave *expensilatio*—which, originally at least, was as much a *negotium juris civilis* as the *sponsio*—an advantage in some cases over stipulation. But it had also a further advantage, which was not affected by the subsequent recognition of the real and consensual contracts as productive of legal obligation on their own merits: it paved the way for subsequent transcription from one person to another. This last must have been of infinite convenience in commerce, not only by enabling traders to dispense with a reserve of coin, but by obviating the risks attending the transit of money over long distances. It was this that led, as Theophilus says was the case, to the conversion even of stipulatory obligations into book-debts; it was not that thereby the creditor obtained a tighter hold over his debtor, but that an obligation was obtained from him which in a sense was negotiable and therefore more valuable.

The evolution of the four purely consensual contracts—sale, location, partnership, and mandate—supplies matter for one of the most interesting chapters in the whole history of the law. But, as it is impossible in such an article as this to attempt to mark the successive stages in the progress of all of them, we shall confine ourselves to sale. The others did not and could not follow identically the same course: location ran most nearly parallel with sale; but partnership and mandate, from their nature, not only started at a different point from the other two, but reached the same goal with them—that of becoming productive of obligation simply on the strength of consent interchanged by the parties—by paths that were sometimes far apart. Nevertheless a sketch of the history of the origin of the contract of sale may be sufficient to indicate generally some of the milestones that were successively passed by all four.²

¹ Literature:—Savigny, "Ueber den Literalcontract der Römer" (originally 1816, with additions in 1849), in his *Verm. Schriften*, vol. i. p. 205 sq.; Keller, in *Sell's Jahrb. f. hist. u. dogm. Bearb. des rom. Rechts*, vol. i. (1841), p. 93 sq.; Gneist, *Die formellen Verträge d. röm. Rechts*, Berlin, 1845, p. 821 sq.; Heimbach, *Die Lehre vom Creditum*, Leipzig, 1848, p. 809 sq.; Fagenstecher, *De literar. obligatione*, etc., Heidelberg, 1851; Danz, *Gesch. d. röm. Rechts*, vol. ii. p. 42 sq. (where there is a résumé of the principal theories); Gide, in the *Rev. de Législ.*, vol. iii. (1878), p. 121 sq.; Buonamici, in the *Archivio Giuridico*, vol. xvi. (1876), p. 3 sq.; Gide, *Études sur la Novation*, Paris, 1879, p. 185 sq.; Baron, *Die Conditionen*, Berlin, 1881, §§ 11, 12.

² The literature on the history of the contract of sale is profuse, but mostly

Going back as far as history carries us we meet with it under the Con- names of *emptio* and *venditio*, but meaning no more than barter; for tracts of *emere* originally signified simply "to take" or "acquire." Sheep sale, and cattle (*pecus*, hence *pecunia*) may for a time have been a very usual article of exchange on one side, and then came raw metal weighed in the scales. But it was still exchange, instant delivery of goods on one side against simultaneous delivery of so many pounds weight of copper on the other. With the reforms of Servius Tullius came the distinction between *res Mancipi* and *res nec Mancipi*, and with it a regulated mancipation for sale and conveyance of the former. It was still barter; but along with it arose an obligation on the part of the transferrer of the *res Mancipi* to warrant the transferee against eviction,—a warranty that was implied in the mancipation. Whether this rule obtained from the first or was the growth of custom it is impossible to say; but it is in the highest degree probable that it was the XII. Tables which fixed that the measure of the transferrer's liability to the transferee in the event of eviction should be double the amount of the price. Equally impossible is it to say when the practice arose of embodying declarations, assurances, and so forth in the mancipation (*leges Mancipii*), which were held binding on the strength of the *negotium juris civilis* in which they were clothed. They received statutory sanction in the Tables, in the words already referred to more than once—"cum nexum faciet Mancipiumque, uti lingua nuncupassit, ita jus esto," substantially "whatever shall by word of mouth be declared by the parties in the course of a transaction *per aes et libram* in definition of its terms shall be law as between them."

The substitution by the decemvirs of coined money, that was to be counted for rough metal that had been weighed, converted the contribution on one side into price (*pretium*), as distinguished from article of purchase (*merx*) on the other; and sale thus became distinct from barter. In contemplation of the separation of the mancipation and the price-paying, and the degeneration of the former into a merely imaginary sale, they enacted that, mancipation notwithstanding, the property of what was sold should not pass to the purchaser until the price had been paid or security by sureties (*vades*) given for it to the vendor; and it was probably by the interpretation of the pontiffs that this was added to the rule,—that until the price was paid no liability for eviction should attach to the transferrer (or *auctor*). The reason of the provision in the XII. Tables was that a vendor who had mancipated or delivered a thing sold by him before receiving the price had no action to enforce payment of the latter; and in such circumstances it was thought but right to give him the opportunity of getting back the thing itself by a real action. It might be, however, that the price had been paid, and yet the vendor refused to mancipate. It was long, apparently, before the purchaser could in such a case compel him to do so. With the introduction of the *legis actio per conditionem* he (the purchaser) had undoubtedly the power to recover the money on the ground of the vendor's unjustifiable enrichment,—that the latter had got it for a consideration which had failed (*causa data, causa non secuta*); and it is possible that before that he had a similar remedy *per judicis postulacionem*.

Down to this point, therefore, say the beginning of the 6th century, there were several obligations consequent on sale of a *res Mancipi*; but not one of them arose directly out of the sale itself, or could be enforced simply on the ground that it had taken place. The vendor was bound to support the purchaser in any action by a third party disputing his right, and to repay him the price twofold in the event of that third party's success; and he was bound, moreover, to make good to him any loss he had sustained through a deficiency of acreage he had guaranteed, non-existence of servitudes he had declared the lands enjoyed, existence of others from which he had stated they were free,³ incapability of a slave for labour for which he was vouched fit, and so on. But these obligations were binding, not in virtue of the sale *per se*, but of the transaction *per aes et libram* superinduced upon it; and, if the vendor had at any time to return the price on failure to mancipate what he had sold, it was not because he had committed a breach of contract, but because he had unjustly enriched himself at the purchaser's expense.

In sales of *res nec Mancipi*, just as in those of *res Mancipi*, a vendor who had been incautious enough to deliver his wares before he had been paid, or had got stipulatory security for the price, or had converted it into a book-debt, might recover them by a real action if payment was unduly delayed; while the purchaser who had paid in advance but failed to get delivery might also get back his money from the vendor on the plea of unwarrantable enrichment. But, as

scattered in periodicals and much of it very fragmentary. It may be enough to refer to Bechmann, *Gesch. d. Kaufs im röm. Recht*, Erlangen, 1876; three articles by Bréard, in the *Nouv. Rev. Hist.*, vol. vi. (1882), p. 180 sq., vol. vii. (1883), p. 536 sq., and vol. viii. (1884), p. 395 sq.; and Mommsen, "Die rom. Anfänge von Kauf u. Miete," in the *Zeitschr. d. Savigny Stiftung*, vol. vi. (1885), *Röm. Abtheil.*, p. 260 sq.

³ Cicero says (*De Off.*, iii. 16, § 65) that, though by the XII. Tables it was enough if a vendor *per aes et libram* made good his positive assurances (*uti lingua nuncupassit, ita jus esto*), the jurists held him responsible for reticence about burdens or defects he ought to have revealed, and liable for a *poena dupli* exactly as if he had guaranteed their non-existence.

mancipation was unnecessary for carrying the property (and, as some think, incompetent), some other machinery had to be resorted to than that of the copper and the scales for imposing upon the vendor an obligation of warranty against eviction, defects, and so forth. It may be that, until trade began to assume considerable proportions, and when a transaction was between citizens, a purchaser was content to rely partly on the honesty of his vendor, partly on the latter's knowledge that he ran the risk of an action for theft if what he sold belonged to another,¹ and partly on the maxim common in all ages and climes, *caveat emptor*. When it was one between a citizen and a peregrin, a different set of rules may have come into play; for between them disputes were settled by recuperators whose decisions were arrived at very much on considerations of natural equity. It was the popularization of the stipulation that facilitated a further advance, rendered all the more necessary by the expansion of intercourse with foreigners and the cessation of recuperation.

Confirmatory stipulations.

We read of a *satisfactio secundum mancipium*, a *stipulatio habere licere*, and a *stipulatio duplæ*. The nature of the first is obscure; it seems to have been connected with mancipatory sales, and probably to have been the guarantee of a *sponsor* for the liabilities imposed upon the vendor by the transaction *per aes et libram* and the *verba mancipata* that were covered by it. The stipulation *habere licere* occurs in Varro, in a collection of styles of sales of sheep, cattle, &c., some of which he says were abridgments of those of M. Manilius, who was consul in the year 605. It was the guarantee of the vendor of a *res nec mancipi*, or even of a *res mancipi* sold without mancipation, that the purchaser should be maintained in possession of what he had bought; it entitled him to reparation on eviction, measured not by any fixed standard but according to the loss he had sustained. It cannot have been introduced, therefore, until after the *Lex Aebutia* and the formulation by the prætor of the *actio ex stipulatu*. The idea of the *stipulatio duplæ* may have been borrowed from the *duplum* incurred by a vendor on the eviction of a purchaser acquiring a thing by mancipation; for one of its earliest manifestations was in the edict of the curule ædiles, who insisted on it from persons selling slaves, probably because the dealers were for the most part foreigners, and therefore unable to complete their sales *per aes et libram*. Judging from Varro, it was a form of stipulation against eviction that in his time was used only in sales of slaves, although he adds that by agreement of parties it might be limited to a *simpulum*.

We learn from the same writer—that the vendor at the same time and in the body of the same stipulation guaranteed that the sheep or cattle he was selling were healthy and of a healthy stock and free from faults, and that the latter had not done any mischief for which their owner could be held liable in a noxal action; and similarly that a slave sold was healthy and not chargeable for any theft or other offence for which the purchaser might have to answer. If any of these guarantees turned out fallacious the purchaser had an *actio ex stipulatu* against the vendor: "Whereas the plaintiff got from the defendant a stipulation that certain sheep he bought from him were healthy, &c. [repeating the words of guarantee], and that he, the plaintiff, should be free to hold them (*habere licere*), whatever it shall appear that the defendant ought in respect thereof to give to or do for the plaintiff, in the value thereof, judge, condemn him; otherwise, acquit him." It is an observation of Bekker's² that the *actio empti* in its original shape was just a simplification of the *actio ex stipulatu* on a vendor's guarantees; the stipulations to which we have been alluding had become such unfailing accompaniments of a sale as to be matters of legal presumption, the result being that the words "whereas the plaintiff bought from the defendant the sheep about which this action has arisen" were substituted in the *demonstratio* (as the introductory clause of the *formula* was called) for the detailed recital of what had been stipulated. Bekker justifies this by reference to the language of Varro, who seems to include under the words *emptio*, *venditio* not merely the agreement to buy and sell but also the stipulations that usually went with it.

Origin of actio empti.

The introduction of an *actio empti* in this shape, however, was far from the recognition of sale as a purely consensual contract. If the price was not paid at once, the purchaser gave his stipulatory promise for it, or got some one on whom the vendor placed more reliance to do so for him, or else made a book-debt of it; and, if it had to be sued for, it was in all these cases by a *condictio certi* and not by an action on the sale. If the price was paid but the thing purchased not delivered, the only remedy open to the purchaser was to get back his money by the same condition, unless, indeed, the guarantee *habere licere* was held to cover delivery, in which case the purchaser might obtain damages in an *actio ex stipulatu* under the name of *actio empti*. But this *actio empti*, whether insisted on on the ground of non-delivery, eviction, or breach of some other warranty, was really an action on the verbal contracts

that had accompanied the sale,—a *strictum jus* action in which the judge could not travel beyond the letter of the engagements of the purchaser. In the latter years of the republic, and probably from the time of Q. Mucius Scævola, it was a *bonæ fidei* action. How had the change come about? A single case of hardship may have been sufficient to induce it, such as the defeat of a claim for damages for eviction on the ground that the stipulatory guarantee had been accidentally overlooked. Ulpian says, "As the *stipulatio duplæ* is a thing of universal observance, action on the ground of eviction will lie *ex emptio* if perchance the vendor of a slave have failed to give his stipulatory guarantee, for everything that is of general custom and practice ought to be in view of the judge in a *bonæ fidei* *judicium*."³

Very little was required to convert the *stricti juris actio empti*, really nothing more than an *actio ex stipulatu*, into a *bonæ fidei* one,—simply the addition by the prætor of the words "on considerations of good faith" (*ex fide bona*) to the "whatever the defendant ought to give to or do for the plaintiff." The effect, however, was immeasurable,—not that it did away with the practice of stipulatory guarantees, for Varro wrote after the time of Q. Mucius (who speaks of the action on sale as a *bonæ fidei* one), and references to them are abundant in the pages of the classical jurists; but it rendered them in law unnecessary. It made sale a purely consensual contract in which, in virtue of the simple agreement to buy and sell, all the obligations on either side that usually attended it were held embodied without express formulation or (still less) stipulatory or literal engagement. And, in instructing the judges to decide in every case between buyer and seller suing *ex emptio* or *ex venditio* on principles of good faith, it really empowered them to go far beyond "general custom and practice," and to take cognizance of everything that in fairness and equity and common sense ought to influence their judgment, so as to enable them freely to do justice between the parties in any and every question that might directly or indirectly arise out of their relation as seller and buyer.

The history of the four nominate real contracts—*mutuum* (i.e., Real loan of money or other things returnable generically), *commodatus* (i.e., loan of things that had to be returned specifically), *depositum*, and *pledge*—is more obscure than that of the consensual ones.⁴ Down to the time of the Pœstilian law loan of money, corn, &c., was usually contracted *per aes et libram*; and it is probable that after the abolition of the *nexum* the obligation on a borrower to repay the money or corn advanced to him was made actionable, under the Silian and Calpurnian laws respectively, by a stipulation contemporaneous with the loan. With the rise of the *jus gentium* loan became actionable on its own merits,—that is to say, the advance and receipt of money as a loan of itself laid the borrower under obligation to repay it, even though no stipulatory engagement had intervened; the *res* (in this case the giving and receiving *mutui causa*) completed the contract. The obligation that arose from it was purely unilateral, and enforceable, where the loan was of money, by the same action as stipulation and literal contract; and so strictly was it construed that interest on the loan was not claimable along with it, the *res* given and received being the full measure of the obligation of repayment. The other three—*commodate*, *depositum*, and *pledge*—became independent real contracts very much later than *mutuum*, possibly not all at the same time, and none of them apparently until very late in the republic. All of them, of course, had been long known as transactions of daily life; the difficulty is to say when they first became actionable, and under what guise.

It is impossible within the space at our command to criticize the various theories entertained of their vicissitudes, for they necessarily vary to some extent in regard to each. We must content ourselves, therefore, with the simple statement that eventually, and within the period with which we are now dealing, they came to be recognized as independent real contracts, the *res* by which they were completed being the delivery of a thing by one person to another for a particular purpose, on the understanding that it was to be returned when that purpose was served. And it is to be noted that, while *mutuum* transferred the property of the money lent, the borrower being bound to return not the identical coins but only an equal amount, in pledge it was only the possession that passed, while in *commodate* and *depositum* the lender or depositor retained both property and (legal) possession, the borrower or depositary having nothing more than the natural detention. In all but *mutuum*, therefore, there was trust; the holder was bound, to an extent varying according to circumstances, to care for what he held as if it were his own, and entitled to be reimbursed for outlay on its maintenance,—bound to return it, yet excused if his failure to do so was due to a cause for which in fairness he could not be held responsible. Consequently the actions on these three contracts, differing from that on *mutuum*, were all *bonæ fidei*, the

judge being vested with full discretion to determine what was fair and equitable in each individual case.

Prætorian Amendments on the Law of Succession.—The most important change in the law of succession during the latter half of the republic was due to the prætors. They introduced, under the name of *bonorum possessio*,¹ what was really beneficial enjoyment of the estate of a deceased person without the legal title of inheritance. There is much to lead to the conclusion that the series of provisions in regard to it which we find in the Julian consolidation of the *Edict* were the work of a succession of prætors, some of them probably not under the republic but under the empire; but it will be convenient to give here a general view of the subject as a whole, disregarding the consideration that some of its features may not have been given to it within the period now under notice.

Justinian, speaking of the origin of *bonorum possessio*, observes that in promising it to a petitioner the prætors were not always actuated by the same motives; in some cases their object was to facilitate the application of the rules of the *jus civile*, in some to amend their application according to what they believed to be the spirit of the XII. Tables, in others, again, to set them aside as inequitable. It is not unreasonable to assume that it was with the purpose of aiding the *jus civile* that the first step was taken in what gradually became a momentous reform; and it is extremely probable that this first step was the announcement by some prætor that, where there was dispute as to an inheritance, and a testament was presented to him bearing not fewer seals than were required by law, he would give possession of the goods of the defunct to the heir named in it.² In this as it stands there is nothing but a regulation of possession of the *bona* of the inheritance pending the question of legal right. Just as between two parties contending about the ownership of a specific thing in a *rei vindicatio* the prætor first settled the question of interim possession, so did he promise to do here when a question was about to be tried about the right to an inheritance (*si de hereditate ambigitur*). It was a provisional arrangement merely, and very necessary in view of the state of the law which permitted a third party, apart from any pretence of title, to step in and complete a *usucapio pro herede* by a year's possession of the effects of the inheritance (*supra*, p. 692). Even at the time when the *Edict* was closed it was not necessarily more than a provisional grant; for, if heirs-at-law of the deceased appeared and proved that, although the testament bore on the outside the requisite number of seals, yet in fact some solemnity of execution, such as the *familiæ venditio* or *testamenti nuncupatio*, had been omitted, the grantee had to yield them up the possession that had been given him pending inquiry. It was only by a rescript of Marcus Aurelius that it was declared that a plea by the heir-at-law of invalidity of a testament on the ground of defect of formalities of execution might be defeated by an *exceptio doli*, on the principle that it was contrary to good faith to set aside the wishes of a testator on a technical objection that was purely formal. Thus was the *bonorum possessio secundum tabulas*, i.e., in accordance with a testament, from being originally one in aid of the *jus civile*, in course of time converted into one in contradiction of it. That the motives and purposes of the series of prætors who built up the law of *bonorum possessio* must have varied in progress of years is obvious; and, once the machinery had been invented, nothing was easier than to apply it to new ideas. The prætor could not make a man heir,—that he always disclaimed; but he could give a man, whether heir or not, the substantial advantages of inheritance, and protect him in their enjoyment by prætorian remedies. He gave him possession of the goods of the deceased, with summary remedies for ingathering them, which, once in his hands, would become his in quiritarian right on the expiry of the period of usucapion; and, by interpolation into the *formula* of a fiction of heirship, he gave him effectual personal actions against debtors of the deceased, rendering him liable in the same way to the deceased's creditors.

Another variety of the *bonorum possessio* was that *contra tabulas*,—in opposition to the terms of a testament. If a testator had neither instituted nor expressly disinherited a son who was one of his *sui heredes*, then his testament was a nullity, and the child passed over had no need of a prætorian remedy. Where *sui heredes* other than sons were passed over the *jus civile* allowed them to participate with the instituted heirs by a sort of accrual. But the *Edict* went further; for, if the institute was a stranger, i.e., not brother or sister of the child passed over, then, on the petition of the latter, the prætor gave him and any other *sui* concurring with him possession of the whole estate of the deceased, the institute being left with nothing more than the empty name of heir. Another

application of the *bonorum possessio contra tabulas* was to the case of emancipated children of the testator's. By the *jus civile* he was not required to institute or disinherit them; for by their emancipation they had ceased to be *sui heredes*, and had lost that interest in the family estate which was put forward as the reason why they had to be mentioned in the testament of their *paterfamilias*. The prætors—although probably not until the empire, and when the doctrines of the *jus naturale* were being more freely recognized—put them on the same footing as unemancipated children, requiring that they also should be either instituted or disinherited, and giving them *bonorum possessio* if they were not. It was *contra tabulas* in the sense that it displaced the instituted heirs either wholly or partially,—wholly when the institutes were not children of the deceased, partially when they were. In the latter case, at least when *sui* were affected by it, the grant of *bonorum possessio* was under the very equitable condition that the grantees should collate or bring into partition all their own acquisitions since their emancipation.

The third variety of *bonorum possessio* was that granted *ab intestato*. As has been shown on a previous page (p. 692), the rules of the *jus civile* in reference to succession on intestacy were extremely strict and artificial. They admitted neither emancipated children nor agnates who had undergone *capitis diminutio*; they admitted no female agnate except a sister; if the nearest agnate or agnates declined, the right did not pass to those of the next degree; mere cognates, kinsmen of the deceased who were not agnates, e.g., grandchildren or others related to him through females and agnates *capite minuti*, were not admitted at all; while a wife had no share unless she had been *in manu* of the deceased and therefore *filiæ loco*. All these matters the prætors amended, and so far paved the way for the revolution in the law of intestate succession which was accomplished by Justinian.

The classes they established were four. (1) Displacing the *sui heredes* of the *jus civile*, they gave the first place to descendants in order (*liberi*), including in the term all those whom the deceased would of intestate have been bound either by the *jus civile* or the *Edict* to institute, tate suc- or disinherit had he made a will, i.e., his wife *in manu*, his natural cession. (as distinguished from adopted) sons and daughters whether *in potestate* at his death or emancipated, the representatives of sons who had predeceased him, and adopted children in his *potestas* when he died. (2) On failure of *liberi* the right to petition for *bonorum possessio* opened to the nearest collateral agnates of the intestate, under their old name, of *legitimi heredes*. (3) Under the *jus civile*, on failure of agnates (and of the *gens* where there was one), the succession was vacant and fell to the fisc, unless perchance it was usucapted by a stranger possessing *pro herede*. The frequency of such vacancies was much diminished by the recognition by the prætors of the right of cognates to claim *bonorum possessio* in the third place. Who they had primarily in view under the name of "cognates" it is impossible to say. The epithet is most frequently applied by modern writers to kinsmen related through females; but in its widest sense it included all kinsmen without exception, and in a more limited sense all kinsmen not entitled to claim as agnates. There were included amongst them therefore—although it is very probable that the list was not made up at once, but from time to time by the action of a series of prætors—not merely kinsmen related through females (who were not agnates), but also agnates of a remoter degree who were excluded as such because the nearest agnates in existence had declined, persons who had been agnates but by reason of *capitis minutio* had lost that character, female agnates more distantly related than sisters, and children of the intestate's who at the time of his death were in an adoptive family. All these took according to proximity. (4) Finally, the claim passed to the survivor of husband and wife, assuming always that their marriage had not involved *manus*. This list constituted the prætorian order of succession on intestacy.

All these *bonorum possessiones* had to be formally petitioned for. In that *ab intestato* descendants were allowed a year for doing so, while other persons were limited to 100 days, the period for those entitled in the second place beginning when that of those entitled in the first had expired, and so on. The grant was always made at the risk of the petitioner; nothing was assured him by it; it might turn out real and substantial (*cum re*) or merely nominal (*sine re*), according as the grantee could or could not maintain it against the heir of the *jus civile*. For the latter was entitled to stand on his statutory or testamentary right, without applying for *bonorum possessio*, although in fact he often did so for the sake of the summary procedure it supplied him for ingathering the effects of the deceased.

The Law of Procedure.—The substitution of the formular system Law of of procedure for that by the "actions of the law" commenced long before the end of the period now under consideration; and we have cedure. had occasion more than once to observe how greatly it facilitated the development of the institutions of property and contractual obligation. But as the change was only completed in the early empire it will be more convenient to defer explanation of the nature of the new procedure in the meantime. (See *infra*, p. 707 sq.)

¹ For a résumé of the principal theories (down to 1870) about the origin of *bonorum possessio*, see Danz, *Geschichte d. rom. Rechts*, vol. ii. § 176. Of the later literature it is enough to mention Leist, in the first 4 vols. of his continuation of Glück's *Pandecten-Commentar*, Erlangen, 1870-79.

² Cic., *In Ferr. II.*, l. 46, § 117. He says (writing in 684) that an edict to that effect was already *tralatitium*, i.e., had been adopted year after year by a series of prætors. Gaius (II. 119) speaks of seven at least as the requisite number of seals; i.e., those of the *libripenes* and the five citizen witnesses, and that of the *antestator*, whose functions are not well understood, but whose official designation appended to his seal recurs so regularly in inscriptions as to leave no doubt that his was the seventh.

CHAPTER IV.—THE JUS NATURALE AND MATURITY OF ROMAN JURISPRUDENCE.

(The Empire until the time of Diocletian.)

I. CHARACTERISTICS AND FORMATIVE AGENCIES OF THE LAW DURING THE PERIOD.

Characteristics generally and Recognition of a Jus Naturale in particular.—The first three centuries of the empire witnessed the perfection of Roman jurisprudence and the commencement of its decline. During that time the history of the law presents no such great landmarks as the enactment of the XII. Tables, the commencement of a prætor's edict, the recognition of simple consent as creative of a contractual bond, or the introduction of a new form of judicial procedure; the establishment of a class of patented jurists speaking as the mouthpieces of the prince, and the admission of all the free subjects of the empire to the privileges of citizenship, are about the only isolated events to which one can point as productive of great and lasting results. There were, indeed, some radical changes in particular institutions, such as the caducary legislation of Augustus, intended to raise the tone of domestic morality and increase fruitful marriages, and the legislation of the same emperor and his immediate successor for regulation of the status of enfranchised slaves; but these, although of vast importance in themselves, and the first of them influencing the current of the law for centuries, yet left upon it no permanent impression. It was by much less imposing efforts that it attained the perfection to which it reached under the sovereigns of the Severan house,—a steady advance on the lines already marked out in the latter years of the republic. The sphere of the *jus Quiritium* became more and more circumscribed, and one after another of the formalities of the *jus civile* was abandoned. The *manus* of the husband practically disappeared; the *patria potestas* of the father lost much of its significance by the recognition, notwithstanding it, of the possibility of a separate and independent estate in the child; slaves might be enfranchised by informal manumission; *res mancipi* constantly passed by simple tradition, the right of the transferee being secured by the Publician action; servitudes and other real rights informally constituted were maintained as effectual *tutiorne prætoris*; an heir's acceptance of a succession could be accomplished by any indication of his intention, without observance of the formal *cretio* of the earlier law; and many of the incidental bargains incident to consensual contract, but varying their natural import, that used to be embodied in words of stipulation, came to be enforceable on the strength of formless contemporaneous agreements.

Idea of a *jus naturale*. The preference accorded by jurists and judges to the *jus gentium* over the *jus civile* is insufficient to account for these and many other changes in the same direction, as well as for the ever-increasing tendency evinced to subordinate word and deed to the *voluntas* from which they arose. They are rather to be attributed to the striving on the part of many after a higher ideal, to which they gave the name of *jus naturale*.¹ It is sometimes said that the notion of a *jus naturale* as distinct from the *jus gentium* was peculiar to Ulpian, and that it found no acceptance with the Roman jurists generally. But this is inaccurate. Justinian, indeed, has excerpted in the *Digest* and put in the forefront of his *Institutes* a passage from an elementary work of Ulpian's, in which he speaks of a *jus naturale* that is common to man and the lower animals, and which is substantially instinct. This is a law of nature of which it is quite true that we find no other jurist taking account.

But many of them refer again and again to the *jus naturale*; and Gaius is the only one (Justinian following him) who occasionally makes it synonymous with *jus gentium*. There can be no question that the latter was much more largely imbued with precepts of natural law than was the *jus civile*, but it is impossible to say they were identical; it is enough to cite but one illustration, pointed out again and again in the texts: while the one admitted the legality of slavery, the other denied it. While the *jus civile* studied the interests only of citizens, and the *jus gentium* those of freemen irrespective of nationality, the law of nature had theoretically a wider range and took all mankind within its purview. We have no hint that the doctrine of the *jus gentium* differed in this respect from the *jus civile*—that a slave was nothing but a chattel; yet we find the latter, when tinctured with the *jus naturale*, recognizing many rights as competent to a slave, and even conceding that he might be debtor or creditor in a contract, although his obligation or claim could be given effect to only indirectly, since he could neither sue nor be sued.

Voigt thus summarizes the characteristics of this speculative Charac-Roman *jus naturale*:—(1) its potential universal applicability to teristics all men, (2) among all peoples, (3) at all times, and (4) its corre-spondence with the innate conviction of right (*innere Rechtsüber-naturale. zeugung*).² Its propositions, as gathered from the pages of the jurists of the period, he formulates thus:—(1) recognition of the claims of blood (*sanguinis vel cognationis ratio*); (2) duty of faithfulness to engagements,—*is natura debet . . . cujus fidem secuti sumus*; (3) apportionment of advantage and disadvantage, gain and loss, according to the standard of equity; (4) supremacy of the *voluntatis ratio* over the words or form in which the will is manifested.³ It was regard for the first that, probably pretty early in the principate, led the prætors to place emancipated children on a footing of perfect equality with unemancipated in the matter of succession, and to admit collateral kindred through females as well as those related through males; and that, in the reigns of Hadrian and Marcus Aurelius respectively, induced the senate to give a mother a preferred right of succession to her children, and *vice versa*. It was respect for the second that led to the recognition of the validity of what was called a natural obligation,—one that, because of some defect of form or something peculiar in the position of the parties, was ignored by the *jus civile* and incapable of being made the ground of an action for its enforcement, yet might be given effect to indirectly by other equitable remedies. Regard for the third was nothing new in the jurisprudence of the period; the republic had already admitted it as a principle that a man was not to be unjustifiably enriched at another's cost; the jurists of the empire, however, gave it a wider application than before, and used it as a key to the solution of many a difficult question in the domain of the law of contract. As for the fourth, it was one that had to be applied with delicacy; for the *voluntas* could not in equity be preferred to its manifestation to the prejudice of other parties who in good faith had acted upon the latter. We have many evidences of the skilful way in which the matter was handled, speculative opinion being held in check by considerations of individual interest and general utility.

A remark of Voigt's on the subject is well worthy of being kept in view, that the risk which arose from the setting up of the precepts of a speculative *jus naturale*, as derogating from the rules of the *jus civile*, was greatly diminished through the position held by the jurists of the early empire. Their *jus respondendi* (*infra*, p. 705) made them legislative organs of the state, so that, in introducing principles of the *jus naturale*, or of *æquum et bonum*, they at the same moment positivized them and gave them the force of law. They were, he says, "philosophers in the sphere of law, searchers after the ultimate truth; but, while they—usually in reference to a concrete case—sought out the truth and applied what they had found, they combined with the freedom and untrammelledness of speculation the life-freshness of practice and the power of assuring the operativeness of their abstract propositions."⁴

Influence of Constitutional Changes.—The changes in the con-Position stitution aided not a little the current of the law. Men of foreign and char-descent reached the throne and recruited the senate,—proud indeed actor of of the history and traditions of Rome, yet in most cases free from jurists. prejudice in favour of institutions that had nothing to recommend them but their antiquity. Military life had not the same attractions as during the republic; there was no longer a tribunate to which men of ambition might aspire; the comitia soon ceased to afford an outlet for public eloquence; so that men of education and

³ Voigt, pp. 321-23.

⁴ Voigt, p. 341.

position had all the more inducement to devote themselves to the conscientious study and regular practice of the law. This was greatly encouraged by the action of Augustus in creating a class of licensed or patented jurists, privileged to give answers to questions submitted to them by the judges, and that *ex auctoritate principis*, and still more so, perhaps, by Hadrian's reorganization of the imperial privy council, wherein a large proportion of the seats were assigned to jurists of distinction. With several of the emperors lawyers were amongst their most intimate and trusted friends. Again and again the office of prætorian prefect, the highest next the throne, was filled by them; Papinian, Ulpian, and Paul all held it in the reigns of Septimius Severus and Alexander. Jurisprudence, therefore, was not merely an honourable and lucrative profession under the new arrangements, but a passport to places of eminence in the state; and till the death of Alexander the ranks of the jurists never failed to be recruited by men of position and accomplishment.

Extension of citizenship to the whole empire.

Extension of Citizenship to the Empire generally.—It must have been between the years 212 and 217 that Caracalla published his constitution conferring citizenship on all the free inhabitants of the empire. Far-reaching as were its consequences, the primary purpose was purely fiscal. Augustus had imposed a tax of five per cent. on inheritances and bequests, except where the whole succession was worth less than 100,000 sesterces or the heir or legatee was a near kinsman of the deceased. It was continued by his successors, and was very profitable, thanks to the propensity of the well-to-do classes for single blessedness, followed by testamentary distribution of their fortunes amongst their friends. But it affected only the successions of Roman citizens, so that the great mass of the provincials escaped it. Caracalla, being needy, not only increased it temporarily to ten per cent., but widened the area of its operation by elevating all his free subjects to the rank of citizens. The words of Ulpian are very inclusive,—“in urbe Romano qui sunt . . . cives Romani effecti sunt”; but there is considerable diversity of opinion as to their meaning, caused by the fact that peregrins are still mentioned by some of Caracalla's successors. Limit the constitution, however, as we may, there can be no question of its immense importance. By conferring citizenship on the provincial peregrins it subjected them in all their relations to the law of Rome, and qualified them for taking part in many transactions both *inter vivos* and *mortis causa* which previously had been incompetent for them. It did away with the necessity for the *jus gentium* as a separate positive system. Its principles and its doctrines, it is true, survived, and were expanded and elaborated as freely and successfully as ever; but they were so dealt with as part and parcel of the civil law of Rome, which had ceased to be Italian and become imperial.

Enactments of Augustus;

Legislation of Comitia and Senate.—Augustus, clinging as much as possible to the form of republican institutions, thought it expedient not to break with the old practice of submitting his legislative proposals to the vote of the comitia of the tribes. Some of them were far from insignificant. Besides various measures for the amendment of the criminal law, three groups of enactments of considerable importance owed their authorship to him, the first to improve domestic morality and encourage fruitful marriage, the second to abate the evils that had arisen from the too lavish admission of liberated slaves to the privileges of citizenship, and the third to regulate procedure in public prosecutions and private litigations.

about marriage;

The first group included the *Lex Julia de adulteriis coercendis* of 786 and the *Lex Julia et Papia Poppæa*,—the latter a voluminous matrimonial code, which for two or three centuries exercised such an influence as to be regarded as one of the sources of Roman law almost quite as much as the XII. Tables or Julian's consolidated *Edict*. It was often spoken of as the *Lex Cædruaria*, one of its most remarkable provisions being that unmarried persons (within certain ages and under certain qualifications) should forfeit entirely anything to which they were entitled under a testament, and that married but childless persons should forfeit one-half, the lapsed provisions (*cædrua*) going to the other persons named in the will who were qualified in terms of the statute, and failing them to the fisc. However well intended, the language of Juvenal and others raises doubts whether the law did not really do more harm than good. By the Christian emperors many of its provisions were repealed, while others fell into disuse; and in the Justinianic books hardly a trace is left of its distinctive features.

about manumission.

The second group included the *Ælia-Sentian* law of the year 4 A.D., the *Fufia-Caninian* law of the year 8, and the *Junia-Norban* law of the year 19,—the last passed in the reign of Tiberius, but was probably planned by Augustus. The *Ælia-Sentian* law regulated the matter of manumission, with the result that a manumitted might on that event, and according to circumstances minutely described, become (1) either a citizen, or (2) a freedman with the possibility of attaining citizenship by a process indicated in the statute, or (3) a freedman who, because of his bad character, was forbidden to reside within a hundred miles of Rome and denied the hope of ever becoming a citizen (*libertus dediticius*). The Junian

law was passed in order to define more precisely the status in the meantime of those freedmen who had a potentiality of citizenship. It did so by assimilating them to the colonial Latins, denying to them the rights of a citizen proper so far as concerned family and succession, but conceding to them all the patrimonial rights of a citizen and the fullest power of dealing with their belongings so long as not *mortis causa* and to the prejudice of their patrons. This was the Junian Latinity so prominent in the pages of Gaius, but of which our limits exclude any detailed description.

The third group of enactments referred to included the two *Leges Judicæ-Julie judicariæ*, of which we know but little. That regulating any laws procedure in private litigations is the same that is mentioned by Gaius as having completed the work of the *Æbutian* law in substituting the formular system for that *per legis actiones*. It must have been a somewhat comprehensive statute, as a passage in the *Vatican Fragments* refers to a provision of its 27th section; and our ignorance of its contents therefore, beyond one or two trifling details, is the more to be regretted.

From the time of Tiberius onwards it was the senate that did the work of legislation, for the simple reason that the comitia were no longer fit for it. And very active it seems to have been. This senate may have been due to some extent to the fact that so many professional jurists, aware from their practice of the points in which the law required amendment, possessed seats in the imperial council, where the drafts of the *senatusconsults* were prepared. It was the *senatusconsults* that were the principal statutory factors of what was called by both emperors and jurists the *jus novum*,—law that departed often very widely from the principles of the old *jus civile*, that was much more in accordance with those of the *Edict*, and that to a great extent might have been introduced through its means had not the authority of the prætors been overshadowed by that of the prince. In the end of the 2d and the beginning of the 3d century the supremacy of the latter in the senate became rather too pronounced, men quoting the *oratio* in which he had submitted to it a project of law instead of the resolution which gave it legislative effect. No doubt it must have been carefully considered beforehand in the imperial council, and rarely stood in need of further discussion; but the ignoring of the formal act that followed it tended unduly to emphasize the share borne in it by the sovereign, and made it all the easier for the emperors after Alexander Severus to dispense altogether with the time-honoured practice.

The Consolidated Edictum Perpetuum.—The edicts of the prætors, Julian's which had attained very considerable proportions before the fall of the republic, certainly received some additions in the early empire. But those magistrates did not long enjoy the same independence as of old; there was a greater *imperium* than theirs in the state, before which they hesitated to lay hands on the law with the boldness of their predecessors. They continued as before to publish annually at entry on office the edicts that had been handed down to them through generations; but their own additions were soon limited to mere amendments rendered necessary by the provisions of some *senatusconsult* that affected the *jus honorarium*. They ceased to be that *viva vox juris civilis* which they had been in the time of Cicero; the emperor, if any one, was now entitled to the epithet; the annual edict had lost its *raison d'être*. Hadrian was of opinion that the time had come for writing its “explicit,” and giving it another and a more enduring and authoritative shape,—for so fashioning and so sanctioning it that it might be received as law, and not merely as edict, throughout the length and breadth of the empire. He accordingly commissioned Salvius Julianus, urban prætor at the time, to revise it, with a view to its approval by the senate as part of the statute law.

The revision, unfortunately, like the XII. Tables, is no longer extant. It is only a very slight account we have of the revision,—a line or two in Eutropius and Aurelius Victor, and a few lines in two of Justinian's prefaces to the *Digest*. We may assume, from what is said there, that there were both abridgment and rearrangement of the edicts of the urban prætor; but the question remains how far Julian consolidated with them those of the peregrin prætor and other officials who had contributed to the *jus honorarium*. Those of the curule ædiles, we are told, were included; Justinian says that they formed the last part of Julian's work, and may have been a sort of appendix. There is reason to believe that so much of the edicts of the provincial governors as differed from those of the prætors were also incorporated in it, and that the edicts of the peregrin prætors, in so far as they contained available matter not embodied in those of their urban colleagues or the provincial governors, were dealt with in the same way. The consolidation got the name of *Edictum Perpetuum* in a sense somewhat different from that formerly imputed to *edicta perpetua* as distinguished from *edicta repentina*, and, after approval by Hadrian, seems to have been formally sanctioned by *senatusconsult*. It was thus a closed chapter so far as the prætors were concerned; for, though it may have continued for a time to hold its place on their album with its formularies of actions, they had no longer any power to alter or make additions to it. It had ceased to be a mere efflux of their *imperium* and had become matter of statute; and its interpreta-

tion and amendment were no longer in their hands but in those of the emperor.

The Julian *Edict* does not seem to have been divided into books, but only into rubricated titles; and the general impression is that the formularies of actions were split up and distributed in their appropriate places. The arrangement is not difficult to discover by comparison of the various commentaries upon it, particularly those of Ulpian and Paul, which each contained over eighty books. First came a series of titles dealing with the foundations and first steps of all legal procedure,—jurisdiction, summons, intervention of attorneys or procurators, &c.; secondly, ordinary process in virtue of the magistrate's *jurisdictio*; thirdly, extraordinary process, originally in virtue of his *imperium*; fourthly, execution against judgment-debtors, bankrupts, &c.; fifthly, interdicts, exceptions, and praetorian stipulations; and lastly, the aedilian remedies. From the quotations from the Julian *Edict* embodied in the fragments of the writings of the commentators preserved by Justinian repeated attempts have been made to reproduce it. Most of them are nothing more than transcripts or attempted reconstructions of passages in the *Digest* which are supposed to have been borrowed from it, and are of comparatively little value. The only really scientific and worthily critical efforts are those of Rudorff in 1869 and Lenel in 1883.¹

Re-sponses of patented counsel. The *Responses of Patented Counsel*.—The right of responding under imperial authority (*jus respondendi ex auctoritate principis*), first granted by Augustus and continued by his successors down to the time of Alexander Severus, did not imply any curtailment of the right of unlicensed jurists to give advice to any one who chose to consult them. What it did was to give an authoritative character to a response, so that the judge who had asked for it and to whom it was presented—for the judges were but private citizens, most of them unlearned in the law—was bound to adopt it as if it had emanated from the emperor himself. It may be that Augustus was actuated by a political motive,—that he was desirous by this concession to attach lawyers of eminence to the new régime, and prevent the recurrence of the evils experienced during the republic from the too great influence of patrons. But, whatever may have prompted his action in the matter, its beneficial consequences for the law can hardly be overrated. For the quasi-legislative powers with which they were invested enabled the patented counsel to influence current doctrine not speculatively merely but positively (*jura condere*), and so to leaven their interpretations of the *jus civile* and *jus honorarium* with suggestions of natural law as to give a new complexion to the system.

Instead of giving his opinion like the unlicensed jurist by word of mouth, either at the request of the judge or at the instance of one of the parties, the patented counsel, who did not require to give his reasons, reduced it to writing and sent it to the court under seal. Augustus does not seem to have contemplated the possibility of conflicting responses being tendered from two or more jurists equally privileged. It was an awkward predicament for a judge to be placed in. Hadrian solved the difficulty by declaring that in such a case the judge should be entitled to use his own discretion.² That on receiving a response with which he was dissatisfied he could go on calling for others until he got one to his mind, and then pronounce judgment in accordance with it on the ground that there was difference of opinion, is extremely unlikely. The more probable explanation of Hadrian's rescript is, that the number of patented responding counsel was very limited; that a judge, if he desired their assistance, was required by this rescript to consult them all (*quorum omnium si, &c.*); that, if they were unanimous, but only then, their opinion had force of statute (*legis vicem optinet*); and that when they differed the judge must decide for himself.

Edicts of Emperors. *Constitutions of the Emperors*.³—Gaius and Ulpian concur in holding that every imperial constitution, whether in the shape of rescript, decree, or edict, had the force of statute. It may be that by the time of Ulpian that was the prevailing opinion; but modern criticism is disposed to regard the *dictum* of Gaius, written in the time of Antoninus Pius, as coloured by his Asiatic notions, and not quite accurate so far as the edicts were concerned. As supreme

magistrate the emperor had the same *jus edicendi* that kings, consuls, and praetors had had before him, and used it as they did to indicate some course of action he meant to adopt and follow or some relief he proposed to grant. His range, of course, was much greater than that of the praetors had been; for his authority endured for life, and extended over the whole empire and every department of government. But originally, and in principle, his successor on the throne was no more bound to adopt any of his edicts than a praetor was to adopt those of his predecessors. That it was not unusual for an edict to be renewed, and that it occasionally happened that the renewal was not by the immediate successor of its original author, are manifest from various passages in the texts. Very frequently, when its utility had stood the test of years, it was transmuted into a *senatusconsult*; this fact proves of itself that an edict *per se* had not the effect of statute. But their adoption by a succession of two or three sovereigns, whose reigns were of average duration, may have been held sufficient to give them the character of consuetudinary law; and, by a not unnatural process, unreflecting public opinion may have come to impute force of statute to the edict itself rather than to the *longa consuetudo* that followed on it, thus paving the way for the assertion by the sovereigns of the later empire of an absolute right of legislation, and for the recognition of the *lex edictalis* (*infra*, p. 710) as the only form of statute.

The imperial rescripts and decrees (*rescripta, decreta*) had force of Rescripts law (*legis vicem habent*) from the earliest days of the empire, and and their operation was never limited to the lifetime of the prince from decrees. whom they had proceeded. But they were not directly acts of legislation. In both the emperor theoretically did no more than authoritatively interpret existing law, although the boundary between interpretation and new law, sometimes difficult to define, was not always strictly adhered to. The rescript was an answer by the emperor to a petition, either by an official or a private party, for an instruction as to how the law was to be applied to the facts set forth; when the answer was in a separate writing it was usually spoken of as an *epistula*; when noted at the foot of the application its technical name was *subscriptio* or *adnotatio*. The decree was the emperor's ruling in a case submitted to him judicially; it might be when it had been brought before him in the first instance *extra ordinem*, or when it had been removed by *supplicatio* from an inferior court in its earliest stage, or when it came before him by appeal. It was as a judge that the emperor pronounced his decree; but, proceeding as it did from the fountain of authoritative interpretation, it had a value far beyond that of the sentence of an inferior court (which was law only as between the parties), and formed a precedent which governed all future cases involving the same question. Those decrees and rescripts constituted one of the most important sources of the law during the first three centuries and more of the empire, and were elaborated with the assistance of the most eminent jurists of the day, the rescripts being the special charge of the *magister libellorum*. From the time of the Gordians to that of the abdication of Diocletian they were almost the only channel of the law that remained.

Professional Jurisprudence.—A sketch of the history of Roman law can hardly be considered complete without some account of the jurists of the first two centuries and a half of the empire, who contributed to it the great body of doctrine embalmed in the *Digest* of Justinian. But the exigencies of space compel us to refrain from entering upon a branch of our subject that cannot be satisfactorily treated without considerable detail, and to content ourselves with referring the reader to the recent work of Mr Roby, or the *Rechtsgeschichte* of Professor Karlowa of Heidelberg, where all will be found that the most inquisitive could desire.⁴ For an account of the extant remains of their writings outside the Justinianian *Digest*, such as the *Institutes* of Gaius, the *Rules* of Ulpian, the *Sentences* of Paul, and a variety of minor pieces, we must likewise refer to Karlowa's book,⁵ which promises to be the most elaborate history of Roman law as yet given to the public.

II. SUBSTANTIVE CHANGES IN THE LAW.

Concession of Peculiar Privileges to Soldiers.—While the period with which we are dealing saw the substantial disappearance of the distinction between citizen and peregrin, it witnessed the rise of another,—that between soldiers and civilians (*militēs, pagani*). The most remarkable effluxes

¹ Rudorff, *De jurisdictioe edictum: edicti perpetui quae reliqua sunt*, Leipzig, 1869, and rev. by Brinz in the *Krit. Vierteljahrsschrift*, vol. xi. (1870), p. 471 sq.; Lenel, *Das Edictum Perpetuum: ein Versuch zu dessen Wiederherstellung*, Leipzig, 1883. The last gained the "Savigny Foundation Prize" offered by the Munich Academy in 1882 for the best restitution of the *formulae* of Julian's *Edict*, but goes far beyond the limited subject prescribed; see Brinz's report upon it to the Academy in the *Zeitschr. d. Sav. Stift.*, vol. iv. (1883), *Röm. Abtheil.*, p. 164 sq.

Karlowa's 2d vol. will contain the history of the private law, the criminal law, and civil and criminal procedure.

⁵ Karlowa, *op. cit.*, § 92. An account of the jurists of the empire and their remains outside the *Digest* will be found in an expansion of the present article now in the press, under the title of *Historical Introduction to the Private Law of Rome*.

Military
testa-
ments.

of the *jus militare* (as it is sometimes called) were the military testament and the *castrense peculium*. The first set at naught all the rules of the *jus civile* and the prætors' edict alike as to the form and substance of last wills. It might be in writing, by word of mouth, by the unspoken signs perhaps of a dying man; all that was required was the *voluntas* so manifested as not to be mistaken. More extraordinary still,—it was sustained even though its provisions ran counter to the most cherished rules of the common law. Contrary to the maxim that no man could die partly testate and partly intestate, a soldier might dispose of part of his estate by testament and leave the rest to descend to his heirs *ab intestato*. Contrary also to the maxim *semel heres semper heres*, he might give his estate to A for life or for a term of years, or until the occurrence of some event, with remainder to B. Contrary to the general rule, a Latin or peregrin, or an unmarried or married but childless person, might take an inheritance or a bequest from a soldier as freely as could a citizen with children. His testament, in so far as it disposed only of *bona castrensia*, was not affected by *capitis deminutio minima*. It was not invalidated by præterition of *sui heredes*, nor could they challenge it because they had less under it than their "legitim"; nor could the instituted heir claim a Falcidian fourth, even though nine-tenths of the succession had been assigned to legatees. Finally, a later testament did not nullify an earlier one, if it appeared to be the intention of the soldier testator that they should be read together.

All this is remarkable, manifesting a spirit very different from that which animated the common law of testaments. True, it was a principle with the jurists of the classical period that the *voluntatis ratio* was to be given effect to in the interpretation of testamentary writings; but that was on the condition that the requirements of law as to form and substance had been scrupulously observed. But in the military testament positive rules were made to yield to the *voluntas* in all respects: the will was almost absolutely unfettered. Roman law in this matter gave place to natural law. One would have expected the influence of so great a change to have manifested itself by degrees in the ordinary law of testaments; yet it is barely visible. In a few points the legislation of Constantine, Theodosius II., and Justinian relaxed the strictness of the old rules; but there was never any approach to the recognition of the complete supremacy of the *voluntas*. In the *Corpus Juris* the contrast between the *testamentum paganum* and the *testamentum militare* was almost as marked as in the days of Trajan. The latter was still a privileged deed, whose use was confined to a soldier actually on service, and which had to be replaced by a testament executed according to the usual forms of law within twelve months after his retirement.

Peculium
castrense.

The *peculium castrense* had a wider influence; for it was the first of a series of amendments that vastly diminished the importance of the *patria potestas* on its patrimonial side. It had its origin in the concession by Augustus to *filiifamilias* on service of the right to dispose by testament of what they had acquired in the active exercise of their profession (*quod in castris adquisierant*). But it soon went much further. Confined at first to *filiifamilias* on actual service, the privilege was extended by Hadrian to those who had obtained honourable discharge. The same emperor allowed them not merely to test on their *peculium castrense*, but to manumit slaves that formed part of it; and a little step further recognized their right to dispose of it onerously or gratuitously *inter vivos*. By and by the range of it was extended so as to include not only the soldier's pay and prize but all that had come to him, directly or indirectly, in connexion with his profession,—his outfit, gifts made to him during his service, legacies from comrades, and so on. All this was in a high degree subversive of the doctrines of the common law. It may almost be called revolutionary; for it involved in the first place the recognition of the right of a person *alieni juris* to make a testament as if he were *sui juris*, and in the second place the recognition of a separate estate in a *filiusfamilias* which he might deal with independently of his *paterfamilias*, which could not be touched by the latter's creditors, and which he was not bound to collate (or bring into hotch-pot) on claiming a share of his father's succession. The radical right of the parent, however, was rather suspended than extinguished; for, if the soldier son died intestate, the right of the *paterfamilias* revived: he took his son's belongings, not as his heir appropriating an inheritance, but as his *paterfamilias* reclaiming a *peculium*.¹

¹ This was altered by Justinian's 118th *Novel*, under which a father taking any part of a deceased son's estate did so as his heir; see *infra*, p. 713.

The Family.—The legislative efforts of Augustus to encourage Family marriage, to which persons of position showed a remarkable distaste, have already been mentioned. The relation of husband and wife still in law required no more for its creation than deliberate interchange of nuptial consent, although for one or two purposes the bride's home-coming to her husband's house was regarded as the criterion of completed marriage. But it was rarely accompanied with *manus*. So repugnant was such subjection to patrician ladies that they declined to submit to confarreate nuptials; and so great consequently became the difficulty of finding persons qualified by confarreate birth to fill the higher priesthoods that early in the empire it had to be decreed that confarreation should in future be productive of *manus* only *quoad sacra*, and should not make the wife a member of her husband's family. *Manus* by a year's uninterrupted cohabitation was already out of date in the time of Gaius; and, although that by coemption was still in use in his time, it probably was quite unknown by the end of the period. Husband and wife therefore had their separate estates, the common establishment being maintained by the husband, with the assistance of the revenue of the wife's dowry (*dos*),—an institution which received much attention at the hands of the jurists, and was to some extent regulated by statute. Divorce was unfortunately very common; it was lawful even without any assignable cause; when blame attached to either side, he or she suffered deprivation to some extent of the nuptial provisions, but there were no other penal consequences.

Not only in the case of a *filiusfamilias* who had adopted a military career, but in all directions, there was manifested a tendency to place restrictions on the exercise of the *patria potestas*. This was due in a great degree to the hold that the doctrines of natural law were gaining within the Roman system, partly also to the fact that the emperors, having succeeded to the censorial *regimen morum*, allowed it freely to influence their edicts and rescripts. Exposure of an infant was still allowed; but a parent was no longer permitted, even in the character of household judge, to put his son to death; in fact his prerogative was limited to moderate chastisement, the law requiring, in case of a grave offence that merited severer punishment, that he should hand his child over to the ordinary tribunal. His right of sale, in like manner, was restricted to young children, and permitted only when he was in great poverty and unable to maintain them, while their impignoration by him was prohibited under pain of banishment.

Except in the solitary case of a son who was a soldier, a *paterfamilias* was still recognized as in law the owner of all the earnings and other acquisitions of his children *in potestate*; but the old rule still remained that for their civil debts he was not liable beyond the amount of the fund he had advanced them to deal with as *de facto* their own (*peculium profecticium*), except when he had derived advantage from their contract or had expressly or by implication authorized them to enter into it as his agents. To the party with whom he had contracted a *filiusfamilias* was himself liable as fully as if he had been a *paterfamilias*, with one exception, namely, when his debt was for borrowed money; in that case, with some very reasonable qualifications, it was declared by the notorious Macedonian senatusconsult (of the time of Vespasian) that the lender should not be entitled to recover payment, even after his borrower had become *sui juris* by his father's death. Between a father and his emancipated son there was, and always had been, perfect freedom of contract; but so was there now between a father and his soldier son in any matter relating to the *peculium castrense*, even though the son was *in potestate*. What is still more remarkable is that the new sentiment which was operating on the *jus civile* admitted the possibility of natural obligation between *paterfamilias* and *filiusfamilias* even in reference to the *peculium profecticium*, which, though incapable of direct enforcement by action, was yet to some extent recognized and given effect to indirectly.

In the matter of guardianship, while the tutory of pupils was carefully tended and the law in regard to it materially amended during the period under review (particularly by a senatusconsult generally referred to as the *Oratio divi Severi*, prohibiting alienation of the ward's property without judicial authority), that of women above the age of puberty gradually disappeared. The guardianship or curatory (*cura*) of minors above puberty owed its institution to Marcus Aurelius. The Plætorian law of the middle of the sixth century of the city had indeed imposed penalties on those taking undue advantage of the inexperience of minors, *i.e.*, persons *sui juris* under the age of twenty-five; and from that time the prætors were in the habit of appointing curators to act with such persons for the protection of their interests in particular affairs. But it was Marcus Aurelius who first made curatory a general permanent office, to endure in the ordinary case until the ward attained majority. The powers, duties, and responsibilities of such curators became a matter for careful and elaborate definition and regulation by the jurists, whose exposition of the law of guardianship, whether by tutors or curators, has found wide acceptance in modern systems of jurisprudence.

The Law of Succession and particularly Testamentary Trusts.—There were far more positive changes in the law of succession than

Law of
succes-
sion.

in either that of property or that of obligation. The rise and progress of the military testament has already been explained. The testament of the common law was still ostensibly that *per aes et libram*; but the practice of granting *bonorum possessio secundum tabulas* to the persons named as heirs in any testamentary instrument that bore outside the requisite number of seals led, from the time of Marcus Aurelius, to the frequent neglect of the time-honoured formalities of the *familiae Mancipatio* and *nuncupatio testamenti*. It was a rescript of his, declaring that an heir-at-law should no longer be entitled to dispute the last wishes of a testator on the technical ground of non-compliance with the purely formal requirements of the law, that practically introduced what Justinian calls the praetorian testament.

One of the commonest provisions in the testaments of the period was the *fideicommissum*,—a request by the testator to his heir to enter to the inheritance and thereafter denude wholly or partially in favour of a third party. It was introduced in the time of Augustus by (it is said) a testator who had married a peregrin wife, and desired thus indirectly to give to his peregrin children the succession which, as not being citizens, they could neither take *ab intestato* nor as his direct testamentary heirs.¹ The practice soon gained ground, and became thoroughly established once the emperor, shocked at the perfidy of a trustee who had failed to comply with the request of his testator, indicated his approval of the new institution by remitting the matter to the consuls of the day, with instructions to do in the circumstances what they thought just. So quickly did it establish itself in public favour, and so numerous did the questions become as to the construction and fulfilment of testamentary trusts, that before long it was found necessary to institute a court specially charged with their determination,—that of the *praetor fideicommissarius*.

The employment of a trust as a means of benefiting those who were under disqualifications as heirs or legatees, as, for example, persons who had no *testamenti factio*, women incapacitated by the Voconian law, unmarried and married but childless persons incapacitated by the Julian and Papia-Poppæan law, and so on, was in time prohibited by statute; but that did not affect its general popularity. For, whether what was contemplated was a transfer of the universal *hereditas* or a part of it to the beneficiary (*fideicommissum hereditatis*), or only of some particular thing (*fideicommissum rei singularis*), a testamentary trust had various advantages over either a direct institution or a direct bequest (*legatum*). In theory the imposition upon the heir of a trust in favour of a beneficiary, whether it required him to denude of the whole or only a part of the inheritance, did not deprive him of his character of heir or relieve him of the responsibilities of the position; and at common law therefore he was entitled to decline the succession, often to the great prejudice of the beneficiary. In order to avoid such a mischance, and at the same time to regulate their relations *inter se* and towards debtors and creditors of the testator's, it became the practice for the parties to enter into stipulatory arrangements about the matter; but these were to some extent rendered superfluous by two senatusconsults, the Trebellian in the time of Nero and the Pegasian in that of Vespasian, which at once secured the beneficiary against the trustee's (i.e., the heir's) repudiation of the inheritance, protected the latter from all risk of loss where he was trustee and nothing more, and enabled the former to treat directly with debtors and creditors of the testator's and himself ingather the corporeal items of the inheritance.

It was one of the advantages of a trust-bequest, whether universal or singular, that it might be conferred in a codicil, even though unconfirmed by any relative testament. The codicil (*codicilli*), also an invention of the time of Augustus, was a deed of a very simple nature. It was inappropriate either for disherison of *sui* or institution of an heir; but if confirmed by testament it might contain direct bequests, manumissions, nominations of tutors, and the like, and whether confirmed or unconfirmed might, as stated, be utilized as a vehicle for trust-gifts. Latterly it was held operative even in the absence of a testament, the trusts contained in it being regarded as burdens on the heir-at-law.

The most important changes in the law of intestate succession during the period were those accomplished by the Tertullian and Orphitian senatusconsults, fruits of that respect for the precepts of natural law which in so many directions was modifying the doctrines of the *jus civile*. The first was passed in the reign of Hadrian, the second in the year 178, under Marcus Aurelius. Down to the time of the Tertullian senatusconsult a mother and her child by a marriage that was unaccompanied with *manus* stood related to each other only as cognates, being in law members of different families; consequently their chance of succession to each other was remote, being postponed to that of their respective agnates to the sixth or seventh degree. The purpose of the senatusconsult was to prefer a mother to all agnates of her deceased child except father and brother

and sister; father and brother excluded her; but with a sister of the deceased, and in the absence of father or brother, she shared equally. While there can be little doubt that it was natural considerations that dictated this amendment, yet its authors were too timid to justify it on the abstract principle of common humanity, lest thereby they should seem to impugn the wisdom of the *jus civile*, and so they confined its application to women who had the *jus liberorum*, i.e., to women of free birth who were mothers of three children and freedwomen who were mothers of four, thus making it ostensibly a reward of fertility. The Orphitian senatusconsult was the counterpart of the Tertullian. It gave children, whether legitimate or illegitimate, a right of succession to their mother in preference to all her agnates; and subsequent constitutions extended the principle, admitting children to the inheritance not only of their maternal grandparents but also to that of their paternal grandmother.

III. JUDICIAL PROCEDURE.

*The Formular System.*²—The ordinary procedure of the first three Formulary centuries of the empire was still two-staged; it commenced before system. the praetor (*in jure*) and was concluded before a judge (*in judicio*). But the *legis actiones* had given place to praetorian *formulae*. Under the older system parties, and particularly the plaintiff, had themselves to formulate in statutory or traditional words of style the matter in controversy between them; and as they formulated, so did it go for trial to centumviral court or judge or arbiters, with the not infrequent result that it was then all too late discovered that the real point in the case had been missed. Under the formulary system parties were free to represent their claim and defence to the praetor in any words they pleased, the plaintiff asking for a *formula* and usually indicating the style on the *album* that he thought would suit his purpose, and the defendant demanding when necessary an exception, i.e., a plea in defence, either praetorian or statutory, that, without traversing the facts or law of the plaintiff's case, avoided his demand on grounds of equity or public policy. It was for the praetor to consider and determine whether the action or exception should or should not be granted, and, if granted, whether it should be according to the style exhibited on the *album* or according to a modification of it. The result he embodied in a written and signed appointment to a judge, whom he instructed what he had to try, and empowered to pronounce a finding either condemning or acquitting the defendant. This writing was the *formula*.

Although it was not until the early empire that this system of procedure attained its full development, yet it had its commencement two centuries before the fall of the republic. Gaius ascribes its introduction and definitive establishment to the *Lex Aebutia* (probably of the second decade of the sixth century of the city) and two judicial laws of the time of Augustus (*supra*, pp. 696, 704). The Aebutian law, of which unfortunately we know very little, is generally supposed to have empowered the praetors (1) to devise a simpler form of procedure for causes already cognizable *per legis actionem*, (2) to devise forms of action to meet cases not cognizable under the older system, and (3) themselves to formulate the issue and reduce it to writing. It was by no means so radical a change as is sometimes supposed. There were *formulae* employed by the praetor both in the procedure *per judicis postulationem* and in that *per condictionem*. The difference between them and the *formulae* of the Aebutian system was that the former were in part mere echoes of the statutory words of style uttered by the plaintiff, and that they were not written but spoken in the hearing of witnesses.

A large proportion of the personal actions of the formulary system Its application evolved out of the *legis actio per condictionem*. The sequence of operations may have been something like this. Taking the personal simplest form of it, the action for *certa pecunia* under the Silian actions. law, the first step was to drop the formal *condictio* from which it derived its character of *legis actio*, thus avoiding a delay of thirty days; the plaintiff stated his demand in informal words, and, if the defendant denied indebtedness, the praetor straightway formulated a written appointment of and instruction to a judge, embodying in it the issue in terms substantially the same as those he would have employed under the earlier procedure:—"Titius be judge. Should it appear that N. N. ought to pay (*dare oportere*) 50,000 sesterces to A. A., in that sum condemn N. N. to A. A.;³ should it not so appear, acquit him." This was no longer the *legis actio per condictionem*, because what had made it *legis actio* was gone, but the *certi condictio* of the formulary system. The *condictio triticaria* of the same system ran on the same lines: "Titius be judge. Should it appear that N. N. ought to give A. A. the slave Stichus, then, whatever be the value of the slave, in that condemn N. N. to A. A.," and so on. In both of these examples the *formula* included only two of the four clauses that might find place in it,⁴—an "in-

¹ They could not even have a claim as cognates under the praetorian rules; for the praetors followed the rule of the *jus civile* to this extent, that they did not grant *bonorum possessio* to a person who had not *testamenti factio* with him whose succession was in question.

² See Keller (as on p. 681, note 1), §§ 23-43; Bethmann-Hollweg (as in same note), vol. ii. §§ 81-87; Bekker (as in same note), vol. i. chaps. 4-7, vol. ii. chaps. 15, 19, 20; Baron, *Gesch. d. röm. Rechts*, Berlin, 1884, vol. i. §§ 202-215.

³ In the typical Roman styles of actions the plaintiff was usually called Aulus Agerius and the defendant Numerius Negidius.

⁴ Gaius enumerates them as the *demonstratio*, *intentio*, *adjudicatio*, and con-

tention" and a "condemnation." The matter of claim in both cases was certain,—so much money in one, a slave in the other; but, while in the first the condemnation also was certain, in the second it was uncertain. What if the claim also was uncertain,—say a share of the profits of a joint adventure assured by stipulation? It was quite competent for the plaintiff to condescend on a definite sum, and claim that as due to him; but it was very hazardous, for unless he was able to prove the debt to the last sesterce he got nothing. To obviate the risk of such failure the prætors devised the *incerti conditio*, whose *formula* commenced with a "demonstration" or indication of the cause of action, and whose "intention" referred to it and was conceived indefinitely: "Titius be judge. Whereas A. A. stipulated with N. N. for a share of the profits of a joint adventure, whatever in respect thereof N. N. ought to give to or do for (*dare facere oportet*) A. A., in the money amount thereof condemn N. N.," and so on.¹ Once this point was attained further progress was comparatively easy, the way being open for the construction of *formulae* upon illiquid claims arising from transactions in which the practice of stipulation gradually dropped out of use (*supra*, p. 701), till at last the *bonae fidei iudicia* were reached, marked by the presence in the "intention" of the words *ex fide bona*,—"whatever in respect thereof N. N. ought in good faith to give to or do for A. A."

Its appli- In the case of real actions the transition from the *legis actiones* cation to to the *formulae* followed a different course. The Æbutian law did not abolish the procedure *per sacramentum* when reference was to be to the centumviral court on a question of quiritarian right. In the time of Cicero that court was apparently still in full activity (p. 678), but by that of Gaius it is doubtful if it was resorted to except for trial of questions of inheritance. In his time questions of property were raised either *per sponsionem* or *per formulam petitoriam*. The procedure by sponson must be regarded as the bridge between the sacramental process and the petitory *vindicatio*. In the first as in the second the question of real right was determined only indirectly. The plaintiff required the defendant to give him his stipulatory promise to pay a nominal sum of twenty-five sesterces in the event of the thing in dispute being found to belong to the former; and at the same time the defendant gave security for its transfer to the plaintiff, with all fruits and profits, in the same event. The *formula* that was adjusted and remitted to a judge *ex facie* raised only the simple question whether the twenty-five sesterces were due or not: the action was in form a personal, not a real one, and was therefore appropriately remitted to a single *iudex* instead of to the centumviral tribunal. But judgment on it could be reached only through means of a finding (*sententia*) on the question of real right; if it was for the plaintiff he did not claim the amount of the sponson, but the thing which had been found to be his; and, if the defendant delayed to deliver it, with its fruits and profits, the plaintiff had recourse against the latter's sureties. The petitory *formula* was undoubtedly of later introduction and much more straightforward. Like the *certi conditio* it contained only "intention" and "condemnation." It ran thus: "Titius be judge. Should it appear that the slave Stichus, about whom this action has been raised, belongs to A. A. in quiritary right, then, unless the slave be restored, whatever be his value, in that you will condemn N. N. to A. A.; should it not so appear, you will acquit him."

Formulae The *formulae* given above, whether applicable to real or personal in factum *juris civilis* or in *jus conceptae*. The characteristic of such a *formula* was that it contained in the "intention" one or other of the following phrases—*ejus esse ex jure Quiritium, adjudicari oportere*,² *dari oportere, dari fieri oportere, or damnnum decideri oportere*.³ Such a *formula* was employed where the right to be vindicated or the obligation to be enforced had its sanction in the *jus civile*, whether in the shape of statute, consuetude, or interpretation. Where, on the other hand, the right or obligation had its sanction solely from the prætor's edict, *formulae* so conceived were inappropriate and incompetent. The actions employed in such cases were *actiones juris honorarii*, and these either *actiones utiles* or *actiones in factum*. The first were adaptations of actions of the *jus civile* to cases that did not properly fall within them; the second were actions entirely of prætorian devising, for the protection of rights or redress of wrongs unknown to the *jus civile*.⁴

demnatio, and describes their several functions in iv. §§ 39-43. Besides these a *formula* might be preceded by a *praescriptio* (Gal., iv. §§ 180-187), and have incorporated in it fictions (§§ 32-38), exceptions (§§ 115-125), and replications, duplications, &c. (§§ 126-129).

¹ This was specifically called the *actio ex stipulatu*, but was really nothing more than a variety of the *conditio incerti*. The later actions on the consensual contracts, and on all the nominate real contracts except *mutuum*, in like manner had specific names, but in fact were just *incerti condictiones* in the larger sense of the phrase.

² Employed only in the divisory actions, i.e., for dividing common property, partitioning an inheritance, or settling boundaries; the demand was that the judge should adjudicate (or assign) to each of the parties such a share as he thought just.

³ Employed in certain actions upon delict, where the old penalties of death, slavery, or talion had in practice been transmuted into money payments, and the defendant consequently called upon to make a settlement in that way.

⁴ In a few instances (not satisfactorily explained) there was both civil and

Of the *actiones utiles* some were called *actiones ficticiae*. Resort to a fiction is sometimes said to be a confession of weakness, and *ficticiae* adversely criticized accordingly. But every amendment on the law is an admission of defect in what is being amended; and it was in sympathy with the spirit of Roman jurisprudence, when it found an action too narrow in its definition, to include some new case that ought to fall within it, rather by feigning that the new case was the same as the old, to bring it within the scope of the existing and familiar action, than to cause disturbance by either altering the definition of the latter or introducing an entirely new remedy. A *bonorum possessor* (*supra*, p. 702) held a position unknown to the *jus civile*; he was not an heir, and therefore not entitled offhand to employ the actions competent to an heir, either for recovering the property of the defunct or proceeding against his debtors. The prætor could have had no difficulty in devising new actions to meet his case; but he preferred the simpler expedient of adapting to it an heir's actions, by introducing into the *formula* a fiction of civil heirship; so he did with the *bonorum emptor* or purchaser of a bankrupt's estate at the sale of it in mass by his creditors. *Emptio bonorum* was a purely prætorian institution, and the prætor, if he had thought fit, could easily have fortified the purchaser's acquisition by giving him prætorian remedies for recovering the property and suing the debtors of the bankrupt; but here again he followed the simpler course of giving him, as if he were a universal successor, the benefit of an heir's actions by help of a fiction of heirship.⁵ A peregrin could not sue or be sued for theft or culpable damage to property, for the XII. Tables and the Aquilian law applied only to citizens; but he could both sue and be sued under cover of a fiction of citizenship. A man who had acquired a *res mancipi* on a good title, but without taking a conveyance by mancipation or surrender in court, if he was dispossessed before he had completed his usucapion, could not sue a *rei vindicatio* for its recovery, for he was not in a position to affirm that he was quiritarian owner; neither, for the same reason, could a man who in good faith and on a sufficient title had acquired a thing from one who was not in a position to alienate it. But in both cases the prætor granted him what was in effect a *rei vindicatio* proceeding on a fiction of completed usucapion,—the Publician action referred to on p. 699.

These are examples of *actiones ficticiae*,—actions of the *jus civile* adapted by this very simple expedient to cases to which otherwise they would have been inapplicable, and forming one of the most important varieties of the *actiones utiles*. Quite different was the course of procedure in the *actiones in factum*, whose number in fact and varieties were practically unlimited, although for the most part granted in pursuance of the prætor's promise in the edict that under such and such circumstances he would make a remit to a *iudex* (*iudicium dabo*),⁶ and formulated in accordance with the relative skeleton styles also published on the *album*. A great number of them came to be known by special names, as, for example, the *actio de dolo*, *actio negotiorum gestorum*, *actio hypothecaria*, *actio de pecunia constituta*, *actio vi bonorum raptorum*, *actio de superficie*, &c.,—the generic name *actio in factum* being usually confined to the innumerate ones. Their *formulae*, unlike those in *jus conceptae*, submitted no question of legal right for the consideration of the judge, but only a question of fact, proof of which was to be followed by a condemnation. That of the *actio de dolo*, for example, ran thus: "Titius be judge. Should it appear that, through the fraud of N. N., A. A. was induced to convey and cede possession to him of his farm (describing it), then, unless on your order N. N. restores it, you will condemn him in damages to A. A.; if it shall not so appear, you will acquit him."

Our limits do not admit of any explanation of the purpose, form, or effect of the prescriptions, exceptions, replications, &c., that were engrafted on a *formula* when required; or of the ways in which the "condemnation" was occasionally "taxed" by the prætor, so as to prevent the award of extravagant damages; or of the consequences of defects in the *formula*; or of the procedure *in jure* before it was adjusted, or *in judicio* afterwards; or of appeal for review of the judgment by a higher tribunal; or of execution (which was against the estate of the judgment-debtor, and took the form of incarceration only when his goods could not be attached). Our main object has been to show how elastic was this procedure, and how the prætorian *formulae*, in conjunction with the relative announcements in the edict, supplied the vehicle for the introduction into the law of an immense amount of new doctrine. The system was fully developed before Julian's consolidation of the

prætorian remedy for the same wrong; for Gaius observes (iv. 45) that in commodate and deposit failure of the borrower or depositary to return the thing lent to or deposited with him gave rise to actions that might be formulated either *in jus* or *in factum*. In the same section he gives the styles of *actiones depositi in jus* and *in factum conceptae*; their comparison is instructive.

⁵ Gal., iv. 85. Theophilus (*Par. Inst.*, iii. 12) calls the *bonorum emptor* *παραιρέσις διάδοχος* (prætorian successor) of the bankrupt.

⁶ Examples: "Si quis negotia alterius . . . gesserit, iudicium eo nomine dabo" (*Dig.*, iii. 5, 3, pr.); "Quae dolo malo facta esse dicuntur, si de his rebus alia actio non erit et justa causa esse videbitur, iudicium dabo" (*Dig.*, iv. 3, 1, § 1); "Nautae caupones stabularii quod ejusque saluum fore receperint, nisi restituerint, in eos iudicium dabo" (*Dig.*, iv. 9, 3, 1); "Quod quis commodasse dicitur, de eo iudicium dabo" (*Dig.*, xii. 6, 1, pr.).

Edict; and the statutory recognition which the latter then obtained did nothing to impair its efficiency.

Procedure extra Ordinem.¹—The two-staged procedure, first *in ure extra jure* and then *in judicio*, constituted the *ordo judiciorum privatorum*. Early in the empire, however, it became the practice in certain cases to abstain from adjusting a *formula* and making a remit to a *judez*, and to leave the cause in the hands of the magistrate from beginning to end. This course was adopted sometimes because the claim that was being made rested rather on moral than on legal right, and sometimes in order to avoid unnecessary disclosure of family misunderstandings. Thus, the earliest questions that were raised about testamentary trusts were sent for consideration and disposal to the consuls, apparently because, in the existing state of jurisprudence, it was thought incompetent for a beneficiary to maintain in reference to the heir (who had only been *requested* to comply with the testator's wishes) that he was bound in law (*dare oportere*) to pay him his bequest. Had the difficulty arisen at an earlier period, and in the heyday of the constructive energy of the praetors, they would probably have solved it with an *actio in factum*. As it was, it fell to the emperors to deal with it, and they adopted the method of *extraordinaria cognitio*, the jurisdiction which they in the first instance conferred on the consuls being before long confided to a magistrate specially designated for it,—the *praetor fideicommissarius*. Questions between tutors and their pupil wards in like manner began to be dealt with *extra ordinem*, the cognition being entrusted by Marcus Aurelius to a *praetor tutelaris*; while fiscal questions in which a private party was interested went to a *praetor fisci*, whose creation was due to Nerva. Claims for aliment between parent and child or patron and freedman rested on natural duty rather than on legal right; they could not therefore well be made the subject-matter of a *judicium*, and consequently went for disposal to the consuls or the city prefect, and in the provinces to the governor. Questions of status, especially of freedom or slavery, at least from the time of Marcus Aurelius, were also disposed of *extra ordinem*; and so were claims by physicians, advocates, and public teachers for their *honoraria*, and by officials for their salaries, the Romans refusing to admit that these could be recovered by an ordinary action of location. In all those extraordinary cognitions the procedure began with a complaint addressed to the magistrate, instead of an *in jus vocatio* of the party complained against; it was for the magistrate to require the attendance of the latter (*evocatio*) if he thought the complaint relevant. The decision was a *judicatum* or *decretum* according to circumstances.

Jural Remedies flowing directly from the Magistrate's Imperium.²—Great as were the results for the law of the multiplication and simplification of *judicia* through the formular system, it may be questioned whether it did not benefit quite as much from the direct intervention of the praetors in certain cases in virtue of the supreme power with which they were invested. This manifested itself principally in the form of (1) interdicts; (2) praetorian stipulations; (3) *missio in possessionem*; and (4) *in integrum restitutio*.

1. The interdicts³ have already been referred to as in use under the *régime* of the *jus civile*; but their number and scope were vastly increased under that of the *jus praetorium*. The characteristic of the procedure by interdict was this,—that in it the praetor reversed the ordinary course of things, and, instead of waiting for an inquiry into the facts alleged by a complainant, provisionally assumed them to be true and pronounced an order upon the respondent, which he was bound either to obey or show to be unjustified. The order pronounced might be either restitutory, exhibitory (in both cases usually spoken of in the texts as a decree), or prohibitory,—restitutory, when, for example, the respondent was ordained to restore something he was alleged to have taken possession of by violent means, to remove impediments he had placed in the channel of a river, and so on; exhibitory, when he was ordained to produce something he was unwarrantably detaining, e.g., the body of a freeman he was holding as his slave, or a will in which the complainant alleged that he had an interest; prohibitory, as, for example, that he should not disturb the *status quo* of possession as between the complainant and himself, that he should not interfere with a highway, a watercourse, the access to a sepulchre, and so forth. If the respondent obeyed the order pronounced in a restitutory or exhibitory decree, there was an end of the matter. But frequently, and perhaps more often than not, the interdict was only the commencement of a litigation, facilitated by sponsions and restipulations, in which the questions had to be tried (1) whether the interdict or injunction was justified, (2) whether there had been breach of it, and, (3) if so, what damages were due in consequence. The procedure therefore was often anything but summary.

In the possessory interdicts *uti possidetis* and *utrubi* in particular it was extremely involved, due to some extent to the fact that they were double interdicts (*interdicta duplicia*), i.e., addressed indifferently to both parties. Gaius says, but, as most jurists think, erroneously, that they had been devised as ancillary to a litigation about ownership, and for the purpose of deciding which of the parties, as possessor, was to have the advantage of standing on the defensive in the *rei vindicatio*.⁴ That they were so used in his time, as in that of Justinian, cannot be doubted. But it is amazing that they should have been, for they were infinitely more cumbrous than the *vindicatio* to which they led up. Take the interdict *uti possidetis*, which applied to immovables, as *utrubi* did to movables. Both parties being present, the praetor addressed them to this effect: "I forbid that one of you two who does not possess the house in question to use force in order to prevent the other who is in possession, provided he is so neither by clandestine or violent exclusion of the first, nor in virtue of a grant from him during pleasure, from continuing to possess as at present." It is manifest that this decided nothing; it was no more than a prohibition of disturbance of the *status quo*; it left the question entirely open which of the parties it was that was in possession, and which that was forbidden to interfere. The manner of its explication was somewhat singular. Each of the parties was bound at once to commit what in the case of one of them must have been a breach of the interdict, by a pretence of violence offered to the other (*vis ex conventu*);⁵ each of them was thus in a position to say to the other—"We have both used force; but it was you alone that did it in defiance of the interdict, for it is I that am in possession." The interim enjoyment of the fruits was then awarded to the highest bidder, who gave his stipulatory promise to pay for them to his adversary in the event of the latter being successful in the long run; penal sponsions and restipulations were exchanged upon the question which of them had committed a breach of the interdict; and on these, four in number, *formulae* were adjusted and sent to a *judez* for trial. If the procedure could not thus be explicated, because either of the parties declined to take part in the *vis ex conventu*, or the bidding, or the sponsions and restipulations, he was assumed to be in the wrong, and, by what was called a secondary interdict, required to abstain from disturbing the other "in all time coming." Whatever we may think of the action system of the Romans in the period of the classical jurisprudence, one cannot help standing aghast at a procedure so cumbrous and complex as that of their possessory interdicts.

2. A praetorian stipulation⁶ was a stipulatory engagement imposed upon a man by a magistrate or judge, in order to secure a stipulatory third party from the chance of loss or prejudice through some act or omission either of him from whom the engagement was exacted or of some other person for whom he was responsible. Although called praetorian, because the cases in which such stipulations were exigible were set forth in the *Edict*, there can be no question that they originated in the *jus civile*; in fact they were just a means of assuring to a man in advance the benefit of an action of the *jus civile* whereby he might obtain reparation for any injury suffered by him through the occurrence of the act or omission contemplated as possible. Ulpian classifies them as cautionary (*cautionales*), judicial, and common. The first were purely precautionary, and quite independent of any action already in dependence between the party moving the magistrate to exact the stipulation and him on whom it was desired to impose it. There were many varieties of them, connected with all branches of the law,—for example, the *cautio damni infecti*, security against damage to a man's property in consequence, say, of the ruinous condition of his neighbour's house, the *cautio usufructuaria* (that property usufructed should revert unimpaired to the owner on the expiry of the usufructuary's life interest, the *cautio judicatum solvi* (that the defendant would satisfy the judgment), the *cautio de dolo* (that a thing claimed in the action would not be fraudulently impaired in the meantime), and many others. Common were such as might either be imposed by a magistrate apart from any depending action or by a judge in the course of one, such as that taken from a guardian for the faithful administration of his office, or from a procurator that his principal would ratify what he did.

3. *Missio in possessionem* was the putting of a person in possession

⁴ If that had been their original purpose, they must have been unknown as long as a *rei vindicatio* proceeded *per sacramentum*; for in the sacramental real action both parties vindicated, and both consequently were at once plaintiffs and defendants.

⁵ So Gaius calls it; it was probably the same thing as the *vis moribus facta* referred to by Cicero, *Pro Caec.*, i. § 2, 8, § 22.

dicts.

Missio in either of the whole estate of another (*missio in bona*) or of some particular thing belonging to him (*missio in rem*). The former was by far the more important. It was resorted to as a means of execution not only against a judgment-debtor but also against a man who fraudulently kept out of the way and thus avoided summons in an action, or who, having been duly summoned, would not do what was expected on the part of a defendant; against the estate of a person deceased to which no heir would enter, thus leaving creditors without a debtor from whom they could enforce payment of their claims; and also against the estate that had belonged to a person who had undergone *capitis deminutio*, if the family head to whom he had subjected himself refused to be responsible for his debts. *Missio in rem* was granted, e.g., where a man refused to give *cautio damni infecti*; the applicant was then put in possession of the ruinous property for his own protection.

In integrum restitutio,¹ reinstatement of an individual, on grounds of equity, in the position he had occupied before some occurrence which had resulted to his prejudice, was one of the most remarkable manifestations of the exercise of the *imperium*. It was not that the individual in question, either directly by action or indirectly by exception, obtained a judgment that either rendered what had happened comparatively harmless or gave him compensation in damages for the loss he had sustained from it, but that the magistrate—and it could only be the prætor, the urban or prætorian præfect, a provincial governor, or the emperor himself—at his own hand pronounced a decree that as far as possible restored the *status quo ante*. It was not enough, however, to entitle a man to this extraordinary relief, that he was able to show that he had been taken advantage of to his hurt, and that no other adequate means of redress was open to him; he required in addition to be able to found on some subjective ground of restitution, such as minority, or, if he was of full age, intimidation which could not be resisted, mistake of fact, fraud, absence, or the like. What should be held to amount to a sufficient ground of restitution, either objective or subjective, was at first left very much to the discretion of the magistrate; but even here practice and jurisprudence in time fixed the lines within which he ought to confine himself, and made the principles of *in integrum restitutio* as well settled almost as those of the *actio quod metus causa* or the *actio de dolo*.

CHAPTER V.—THE PERIOD OF CODIFICATION.

(Diocletian to Justinian.)

I. HISTORICAL EVENTS THAT INFLUENCED THE LAW.

Supremacy of the Emperors as Sole Legislators.—From the time of Diocletian downwards the making of the law was exclusively in the hands of the emperors. The senate still existed, but shorn of all its old functions alike of government and legislation. The responses of patented jurists were a thing of the past. It was to the imperial consistory alone that men looked for interpretation of old law or promulgation of new.

In the reign of Diocletian rescripts were still abundant; but the constitutions in the Theodosian and Justinian Codes from the time of Constantine downwards are mostly of a wider scope, and of the class known as general or edictal laws (*leges generales edictales*). It would be wrong, however, to infer that rescripts had ceased; for Justinian's Code contains various regulations as to their form, and the matter is dealt with again in one of his *Novels*. The reason why so few are preserved is that they were no longer authoritative except for the parties to whom they were addressed. This was expressly declared by the emperors Arcadius and Honorius in 398 in reference to those in answer to applications for advice from officials; and it is not unreasonable to assume that a limitation of the same sort had been put at an earlier date on the authority of those addressed to private parties. Puchta is of opinion that the enactment of Honorius and Arcadius applied equally to *decreta*, for the reason that during this period matters of litigation did not come under the cognizance of the emperors except on appeal, and that under the new arrangements of Constantine the judgment of affirmance or reversal was embodied in a rescript addressed to the magistrate from whom the appeal had been taken. The rule of Arcadius and Honorius was renewed in 425 by Theodosius and Valentinian, who qualified it, however, to this extent,—that, if it contained any distinct indication that the doctrine it laid down was meant to be of general application, then it was to be received as an edict or *lex generalis*. To this Justinian adhered in so far as rescripts in the old sense of the word were concerned; but he declared that his judgments (*decreta*) should be received everywhere as laws of general application, and so should any interpretation given by him of a *lex generalis*, even though elicited by

the petition of a private party. The imperial edicts, adjusted in the consistory, were usually addressed to the people, the senate, or some official, civil, military, or ecclesiastical, according to the nature of their subject-matter.

*Establishment of Christianity as the State Religion.*²—A disposition has sometimes been manifested to credit nascent Christianity with the humaner spirit which began to operate on some of the state institutions of the law in the first century of the empire, but which religion, in a previous section we have ascribed to the infiltration into the *jus civile* of doctrines of the *jus naturale*, the product of the philosophy of the Stoa. The teaching of Seneca did quite as much—may far more—to influence it than the lessons that were taught in the little assemblies of the early converts. It would be a bold thing to say that, had Christianity never gained its predominance, that spirit of natural right would not have continued to animate the course of legislation, and to evoke, as years progressed, most of those amendments in the law of the family and the law of succession that were amongst the most valuable contributions of the imperial constitutions to the private law. It may well be that that spirit was intensified and rendered more active with the growth of Christian belief; but not until the latter had been publicly sanctioned by Constantine, and by Theodosius declared to be the religion of the state, do we meet with incontestable records of its influence. We find them in enactments in favour of the church and its property, and of its privileges as a legatee; in those conferring or imposing on the bishops a supervision of charities and charitable institutions, and a power of interfering in matters of guardianship; in the recognition of the efficacy of certain acts done in presence of two or three of the clergy and thereafter recorded in the church registers; in the disabilities as to marriage and succession with which heretics and apostates were visited, and in a variety of minor matters. Of greater importance were three features for which it was directly responsible,—the repeal of the caducary provisions of the Papia-Poppæan law, the penalties imposed upon divorce, and the institution of the *episcopalis audientia*.

The purpose of the caducary law was to discourage celibacy and encourage fruitful marriages; but legislation in such a spirit could not possibly be maintained when celibacy had come to be inculcated as a virtue, and as the peculiar characteristic of a holy life. The penalties alike of *orbitas* and *coelibatus* were abolished by Constantine in the year 320. The legislation about divorce, from the first of Constantine's enactments on the subject down to those of Justinian, forms a miserable chapter in the history of the law. Not one of the emperors who busied himself with the matter, undoing the work of his predecessors and substituting legislation of his own quite as complicated and futile, thought of interfering with the old principle that divorce ought to be as free as marriage and independent of the sanction or decree of a judicial tribunal. Justinian was the first who, by one of his *Novels*, imposed a condition on parties to a divorce of common accord (*communis consensu*), namely, that they should both enter a convent, otherwise it should be null; but, so distasteful was this to popular feeling, and so little conducive to improvement of the tone of morals within the conventual precincts, that it was repealed by his successor. The legislation of Justinian's predecessors and the bulk of his own were levelled at one-sided repudiations, imposing penalties, personal and patrimonial (1) upon the author of a repudiation on some ground the law did not recognize as sufficient—and the lawful grounds varied from reign to reign—and (2) upon the party whose misconduct gave rise to a repudiation that was justifiable. The bishop's court (*episcopale iudicium*, *episcopalis audientia*) had its origin in the practice of the primitive Christians, in accordance with the apostolic precept, of submitting their differences to one or two of their brethren in the faith, usually a presbyter or bishop, who acted as arbiter. On the establishment of Christianity the practice obtained legislative sanction, Constantine giving the bishop's court concurrent jurisdiction with the ordinary civil courts where both parties preferred the former, and by a later enactment going so far as to empower one of the parties to a suit to remove it to the ecclesiastical tribunal against the will of the other. For various reasons, advantage was taken of this power of resorting to the bishop to an extent which seriously interfered with the proper discharge of his spiritual functions, so that Honorius judged it expedient to revert to the original rule, and, at least as regarded laymen, to limit the right of resort to the episcopal judicatory to cases in which both parties consented. It is impossible to say with any approach to exactitude what effect this intervention of the clergy as judges in ordinary civil causes—for they had no criminal jurisdiction—had on the development of the law. But it can hardly have been without some influence in still further promoting the tendency to subordinate act and word to will and *animus*, to deal leniently with technicalities, and to temper the rules of the *jus civile* with equity and considerations of natural right.

New
methods
of pro-
cedure.

*Abandonment of the Formular System of Procedure.*¹—The formular system, with its remit from the prætor to a sworn *iudex* who was to try the cause, was of infinite advantage to the law; for the judgment was that of a free and independent citizen, untrammelled by officialism, fresh from some centre of business, and in full sympathy with the parties between whom he had to decide. Such a system was incompatible with the political arrangements of Diocletian and Constantine; and it is with no surprise that we find the former of these sovereigns instructing the provincial governors that in future, unless when prevented by pressure of business (or, according to a later constitution of Julian's, when the matter was of trifling importance), they were themselves to hear the causes brought before them from first to last, as had previously been the practice in the *extraordinariæ cognitiones*. The remit in such cases was not, as formerly, to a private citizen, but to what was called a *iudex pedaneus*, probably a matriculated member of the local bar; and for a time his delegated authority was embodied in a *formula* after the old fashion. But even this exceptional use of it did not long survive, for an enactment by the two sons of Constantine, conceived in terms the most comprehensive, declared fixed styles to be but traps for the unwary, and forbade their use in any legal act whatever, whether contentious or voluntary. The result was, not only the formal disappearance of the distinction between the proceedings *in iure* and *in iudicio*, but the practical disappearance also of the distinctions between actions *in ius* and *in factum*, and between *actiones directæ* and *actiones utiles*, the conversion of the interdiction into an *actio ex interdicto*, admission of the power of amendment of the pleadings, condemnation in the specific thing claimed, if in existence, instead of its pecuniary equivalent, and execution accordingly by the aid of officers of the law.

Under the new system a process was full from first to last of intervention by officials. The *in ius vocatio* of the XII. Tables—the procedure by which a plaintiff himself brought his adversary into court—was a thing of the past. In the earlier part of the period the proceedings commenced with the *litis denuntiatio* introduced in the time of Marcus Aurelius and remodelled by Constantine; but under Justinian (though probably begun before his reign) the initial step was what was called the *libellus conventionis*. This was a short and precise written statement addressed by the plaintiff to the court, explaining (but without detail) the nature of the action he proposed to raise and the claim he had to prefer; this was accompanied with a formal undertaking to proceed with the cause and follow it out to judgment, under penalty of having to pay double costs to the defendant. If the judge was satisfied of the relevancy of the libel, he pronounced an interlocutor (*interlocutio*) ordaining its service on the respondent; this was done by an officer of the court, who cited him to appear on a day named, usually at a distance of two or three months. The defendant, through the officer, put in an answer (*libellus contradictionis*), at the same time giving security for the proper maintenance of the defence and eventual satisfaction of the judgment. On the day appointed the parties were first heard on any dilatory pleas, such as defect of jurisdiction; if none were offered, or those stated repelled, they then proceeded to expound their respective grounds of action and defence, each finally making oath of his good faith in the matter (*iuramentum calumnie*), and their counsel doing the same.

From this point, which marked the *litis contestatio* or joinder of issue, the procedure was much the same as that *in iudicio* under the formular system. But in all cases in which the demand was that a particular thing should be given or restored, and the plaintiff desired to have the thing itself rather than damages, execution was specific and effected through officers of the law (*manu militari*). Where, on the other hand, the condemnation was pecuniary, the usual course was for the judge, through his officers, to take possession of such things belonging to the defendant as were thought sufficient to satisfy the judgment (*pignus in causa iudicati captum*), and they were eventually sold judicially if the defendant still refused to pay; the *missio in bona* of the classical period was rarely resorted to except in the case of insolvency.

*The Valentinian Law of Citations.*²—This famous enactment, the production of Theodosius (II.), tutor of the youthful Valentinian III., was issued from Ravenna in the year 426, and was addressed to the Roman senate. It ran thus:—

"We accord our approval to all the writings of Papinian, Paul, Gaius, Ulpian, and Modestine, conceding to Gaius the same authority that is enjoyed by Paul, Ulpian, and the rest, and sanctioning the citation of all his works. We ratify also the jurisprudence (*scien-*

tia) of those earlier writers whose treatises and statements of the law the aforesaid five have imported into their own works,—Scevola, for example, and Sabinus, and Julian, and Marcellus,—and of all others whom they have been in the habit of quoting as authorities (*omniumque quos illi celebraverunt*), provided always, as their antiquity makes them uncertain, that the texts of those earlier jurists are verified by collation of manuscripts. If divergent *dicta* be adduced, that party shall prevail who has the greatest number of authorities on his side; if the number on each side be the same, that one shall prevail which has the support of Papinian; but, whilst he, most excellent of them all, is to be preferred to any other single authority, he must yield to any two. [Paul's and Ulpian's notes on his writings, however, as already enacted, are to be disregarded.] Where opinions are equal, and none entitled to preference, we leave it to the discretion of the judge which he shall adopt."

This constitution has always been regarded as a signal proof of the lamentable condition into which jurisprudence had sunk in the beginning of the 5th century. Constantine, a hundred years earlier, had condemned the notes of Ulpian and Paul upon Papinian. There were no longer any living jurists to lay down the law (*iura condere*); and, if it was to be gathered from the writings of those who were dead, it was well that the use of them should be regulated. The Valentinian law proceeded so far in the same direction. It made a selection of the juriconsults of the past whose works alone were to be allowed to be cited,—Papinian, Paul, Ulpian, and Modestine, the four latest patented counsel of any distinction; Gaius, of authority previously only in the schools, but whose writings were now approved universally, notwithstanding that he had never possessed the *ius respondendi*; and all the earlier jurists to whom those five had accorded their imprimatur. But it went yet a step further, for it declared all of them, with the sole exception of Papinian, to be of the same authority, and degraded the function of the judge in most cases, so far at least as a question of law was concerned, to the purely arithmetical task of counting up the names which the industry of the advocates on either side had succeeded in adducing in support of their respective contentions. It is probable that, from the days of Hadrian down to Alexander Severus, when the emperor in his council had to frame a rescript or a decree, its tenor would be decided by the vote of the majority; but that was after argument and counter-argument, which must in many cases have modified first impressions. Taking the votes of dead men, who had not heard each other's reasons for their opinions, was a very different process. It may have been necessary; but it can have been so only because a living jurisprudence had no existence,—because the constructive talent of the earlier empire had entirely disappeared.

II. ANTEJUSTINIANIAN COLLECTIONS OF STATUTE AND JURISPRUDENCE.

The Gregorian and Hermogenian Codes.—The first of these *Codes* Gregorian was a collection of imperial rescripts (with a few edicts, &c.) made rian and by one Gregorianus in the very end of the 3d century, and probably Hermogenian at the instigation of Diocletian, though whether in the East or the genian West critics are unable to decide. The collection of Hermogenianus, Codes. also of rescripts, seems to have been a supplement to the earlier one. As the latest enactment in it belongs to the year 365, the probability is that the collection was published about that time. Both *Codes*, although the work of private parties, received statutory recognition from Theodosius and Valentinian in their commission for the preparation of a collection of edictal law; and from the language of Justinian in reference to them there is reason to believe that in the courts they were regarded as authoritative, even to the ignoring of all rescripts not embodied in them.

The Theodosian Code and Post-Theodosian Novels.—Three years Theodosian Code after the publication of the "law of citations" Theodosius nominated a commission to initiate the preparation of a body of law which, if his scheme had been carried into execution, would have rendered that of Justinian unnecessary. In a constitution some ten years later he explains the motives that had actuated him,—that he saw with much concern the poverty-stricken condition of jurisprudence and how very few men there were who, notwithstanding the prizes that awaited them, were able to make themselves familiar with the whole range of law; and that he attributed it very much to the multitude of books and the large mass of statutes through which it was dispersed, and which it was next to impossible for any ordinary mortal to master. His scheme was eventually to compile one single code from materials derived alike from the writings of the jurists, the Gregorian and Hermogenian collections of rescripts, and the edictal laws from the time of Constantine downwards. His language leaves no doubt that it was his intention to have this general code very carefully prepared, so as to make it a complete exponent of the law in force, which should take the place of everything, statutory or jurisprudential, of an earlier date. The collection of edicts which he directed his commissioners to prepare, and which was to contain all that had not been displaced by later legislation, even though some of them might be obsolete by disuse, was to be

¹ Wieding, *Der Justinianische Libellprozess*, Vienna, 1865; Bethmann-Hollweg (as on p. 681, note 1), vol. iii. (1867); Muther (crit. Wieding), in the *Krit. Vierteljahrsschrift*, vol. ix. (1867), pp. 161 sq., 329 sq.; Wieding, in same journal, vol. xii. (1870), p. 228 sq.; Bekker (as on p. 681, note 1), vol. ii. chaps. 23, 24; Baron, *Gesch. d. röm. Rechts*, vol. i. p. 448 sq.

² *Theod. Cod.*, i. 4, 3; Puchta, in the *Rhein. Museum f. Jurisprud.*, vol. v. (1852), p. 141 sq., and *Verm. Schriften*, Leipzig, 1851, p. 284 sq.; Sanio, *Rechtshist. Abhandl. u. Studien*, Königsberg, 1845, p. 1 sq.; Karlowa, *Röm. Rechtsgesch.*, vol. i. p. 933 sq.

the first step in the execution of his project. For some reason or other nothing followed upon this enactment; and in 435 a new and stronger commission was nominated to collect the edicts, but nothing was said in their instructions about anything ulterior. The work was completed in three years, and published at Constantinople early in the year 438, with the declaration that it should take effect from 1st January following; and a copy was communicated to Valentinian, who ordained that it should come into force in the West from 12th January 439. The arrangement is in sixteen books, subdivided into titles, in which the constitutions are placed in chronological order. They cover the whole field of law, private and public, civil and criminal, fiscal and municipal, military and ecclesiastical. The private law is contained in the first five, which unfortunately are very defective. The imperial edicts subsequent to the publication of the *Code* got the name of *Novels* (*novellae constitutiones*).

Collatio. The *Collatio*, the *Vatican Fragments*, and the *Consultatio*.—These were unofficial collections. The first—*Collatio Legum Mosaicarum et Romanarum*, otherwise *Lex Dei quam Dominus praecepit ad Moysen*—is a parallel of divine and human law, the former drawn from the Pentateuch and the latter from the writings of Gaius, Papinian, Paul, Ulpian, and Modestine, rescripts from the Gregorian and Hermogenian *Codes*, and one or two later general enactments. Its date is probably about the year 390, but its authorship is unknown. The *Vatican Fragments* were discovered by Mai in a palimpsest in the Vatican in 1820,—evidently part of a book of practice compiled in the Western empire, and of very considerable dimensions. The extant fragments deal with the law of sale, usufruct, dowries, donations, tutories, and processual agency, and are drawn from the writings of Papinian, Ulpian, and Paul, the two collections of rescripts, and a few general enactments, the latest dating from the year 372. The compilation, therefore, may be of about the same antiquity as the *Collatio*. The *Consultatio* (*Veteris cujusdam Jurisconsulti Consultatio*) was first published by Cujas in 1577. It seems to be part of a collection of answers upon questions of law submitted for the opinion of counsel, and is of value for the fragments it contains from Paul's *Sentences* and the three *Codes*. It is thought to have been written in France in the end of the 5th or beginning of the 6th century.

Romano-barbarian codes. The *Romano-Barbarian Codes*.—This title is usually applied to three collections compiled in western Europe after it had thrown off the sovereignty of Rome.

1. The *Edictum Theodorici* was compiled at the instance of Theodoric, king of the Ostrogoths, in or very soon after the year 500. Its materials were drawn from the writings of the jurists—principally the *Sentences* of Paul—the Gregorian, Hermogenian, and Theodosian *Codes*, and the later *Novels*, all reduced into 154 sections, with no systematic arrangement, but touching upon all branches of the law public and private, especially criminal law and procedure. It was professedly intended to apply to all Theodoric's subjects, both Goths and Romans.

2. The *Lex Romana Visigothorum* or *Breviarium Alaricianum* was a much more ambitious and important collection. It was compiled by a commission appointed by Alaric II., king of the Western Goths, with approval of the bishops and nobles, and published at Aire in Gascony in the year 506. The compilers selected their material partly from *leges* (statute law) and partly from *jus* (jurisprudential law), taking what they considered appropriate, without altering the text except in the way of excision of passages that were obsolete or purely historical. For the *leges* they utilized some 400 of the 3400 enactments (according to Haenel's estimate) of the Theodosian *Code*, and about 80 of the known 104 post-Theodosian *Novels*; for the *jus*,—the *Institutes* of Gaius, Paul's *Sentences*, the Gregorian and Hermogenian rescripts, and the first book of Papinian's *Responses* (a single sentence). All of these, except Gaius, were accompanied with an "interpretation," which resembles the *interpretatio* of the XII. Tables in that it is often not so much explanatory of the text as qualificative or corrective. Gaius is contained in an epitome in two books, believed to have been only a reproduction of an abridgment already current, and dating from about the beginning of the 5th century. The *Breviary* exercised very considerable influence in Europe generally; and there is no question that, until the rise of the Bologna school in the 12th century, it was from it, rather than from the books of Justinian, that western Europe acquired its scanty knowledge of Roman law.

3. The *Lex Romana Burgundionum*, formerly, owing to a mistake of a transcriber, called *Papinianus*, is the collection which King Gundobald, when publishing his code of native law (*Lex Burgundionum* or *Gundobada*), had promised should be prepared for the use of his Roman subjects. It deals with private law, criminal law, and judicial procedure, distributed through 47 titles, and is arranged very much after the order of the *Gundobada*, from which it has a few extracts. Its statutory Roman sources are the same as those of the *Breviary*; the jurisprudential authorities referred to are Gaius and Paul, the latter in his *Sentences*, and the former (only three times altogether) in some other book than his *Institutes*.

III. THE JUSTINIANIAN LEGISLATION.

Justinian's Collections and his own Legislation.—It is Justinian's unnecessary to revert to the history of Justinian outside his legislative achievements, or even to speak of his collections in detail, for both have already been described in the article JUSTINIAN I. (vol. xiii. p. 792 sq.). Ambitious to carry out a reform more complete even than that which Theodosius had planned but failed to execute, he took the first step towards it little more than six months after the death of his uncle Justin, in the appointment of a commission to prepare a collection of statute law (*leges*), among which he included the rescripts of the Gregorian and Hermogenian *Codes*. It was published in April 529; and in rapid succession there followed his *Fifty Decisions* (529-532), his *Institutes* (21st November 533), his *Digest* of excerpts from the writings of the jurists (16th December 533), and the revised edition of his *Code*, in which he incorporated his own legislation down to date (16th November 534). From that time down to his death in 565 there followed a series of *Novels* (*novellae constitutiones*), mostly in Greek, which were never officially collected, and of which probably many have been lost.

Taking his enactments in the *Code* and his *Novels* together we have of Justinian's own legislation about 400 constitutions. Diocletian's contributions to the *Code* are about three times as numerous; but most of them professed to be nothing more than short declaratory statements of pre-existing law, whereas Justinian's, apart from his *Fifty Decisions*, were all reformatory enactments, many of them as long as an average Act of Parliament, and dealing with diverse matters under the same rubric. They cover the whole field of law, public and private, civil and criminal, secular and ecclesiastical. It cannot be said that they afford pleasant reading: they are so disfigured by redundancy of language, involved periods, and nauseous self-glorification. But it cannot be denied that many of those which deal with the private law embody reforms of the highest importance and of most salutary tendency. He sometimes loved to pose as the champion of the simplicity and evenhandedness of the early law, at others to denounce it for its subtleties; sometimes he allowed himself to be influenced by his own extreme asceticism, and now and again we detect traces of subservience to the imperious will of his consort; but in the main his legislation was dictated by what he was pleased to call *humanitas* so far as the law of persons was concerned, and by *naturalis ratio* and public utility so far as concerned that of things. The result was the eradication of almost every trace of the old *jus Quiritium*, and the substitution for it, under the name of *jus Romanum*, of that cosmopolitan body of law which has contributed so largely to almost every modern system.

Amendments on the Law of the Family.—With the Christian Law of emperors the last traces disappeared of the old conception of the family *familia* as an aggregate of persons and estate subject absolutely to relations of the power and dominion of its head. *Manus*, the power in a husband over his wife and her belongings, was a thing of the past; both stood now on a footing of equality before the law; perhaps it might be more accurate to say, at least with reference to the Justinianian legislation, that the wife was the more privileged of the two in respect both of the protection and the indulgence the law accorded her. With *manus* the old confarreation and coemption had ceased, marriage needing nothing more than simple interchange of consent, except as between persons of rank or when the intention was to legitimate previous issue; in the latter case a written marriage settlement was required, and in the former either such a settlement or a marriage in church before the bishop and at least three clerical witnesses, who granted and signed a certificate of the completed union. The legislation of the Christian emperors on the subject of divorce, largely contributed to by Justinian in his *Novels*, has already been referred to. In regard to dowries many new provisions were introduced, principally for curtailing the husband's power of dealing with the dowry while the marriage lasted, enlarging the right of the wife and her heirs in respect of it, and simplifying

the means of recovering it from the husband or his heirs when the marriage was dissolved. Between the time of Constantine and that of Theodosius and Valentinian it had become the practice for a man to make a settlement on his intended wife of a provision which was to remain his property (but without the power of alienation) during the marriage, but to pass to her on his predecease; it got the name of *donatio ante nuptias* or sometimes, as being a sort of return for the *dos*, *antipherna*. The earliest legislation about it was by the last-mentioned emperors; Zeno and Justin followed suit; and Justinian, in *Code* and *Novels*, published five or six enactments for its regulation. The general result was that, wherever a *dos* was given or promised on the part of the wife, there a *donatio* was to be constituted on the part of the husband; that, if one was increased during the marriage, a corresponding increase was to be made to the other; that it might be constituted after the marriage without infringing the rule prohibiting donations between husband and wife, which caused Justinian to change its name to *donatio propter nuptias*; that the wife might demand its transfer to her (as she could that of the *dos*) on her husband's insolvency, but under obligation to apply its income to the maintenance of the family; and that on the dissolution of the marriage by her husband's death or by a divorce for which he was in fault she had ample remedies for reducing it into possession.

The change in the complexion of the relations between husband and wife under the Christian emperors, however, was insignificant when compared with that which had overtaken the relation between parent and child. Justinian in his *Institutes* reproduces the boast of Gaius that nowhere else had a father such power over his children as was exercised by a Roman *paterfamilias*. True it is that the *patria potestas* in name still held a prominent place in the Justinianian collections; but it had been shorn of most of the prerogatives that had characterized it in the republic. To expose a new-born child was forbidden under penalties. To take the life of a grown-up one—unless it was a daughter slain with her paramour in the act of adultery—was murder; for the domestic tribunal, with the judicial power of life and death in the *paterfamilias* as its head, had long disappeared. For the same reason a parent could no longer sell his child as a slave, at least he could do so only when the child was an infant and he in such extreme poverty as to be unable to support it. Even the right to make a noxal surrender of his son to a party who had suffered from the latter's delict had silently become obsolete; so greatly had altered sentiment, in sympathy with legislation, curtailed the power of the *paterfamilias* over those in his *potestas*. All that remained of it in the latest Justinianian law was no more than is sanctioned in most modern systems as natural emanations of the paternal relationship,—the rights of moderate chastisement for offence, of testamentary nomination of guardians, of pupillary substitution (enlarged by Justinian), and of withholding consent from the marriage of a child, but subject to magisterial intervention if used unreasonably.

How the right of the *paterfamilias* over the earnings and acquisitions of his children was modified by the recognition of the *peculium castrense* has been shown in a previous page (p. 706). But the modification was carried to such an extent by the Christian emperors as finally to negative the father's ownership altogether, except as regarded acquisitions that were the outcome of funds advanced by him to his child for his separate use (*peculium profectitium*). Of some of the child's acquisitions his father had, down to the time of Justinian, the life interest and right of administration; but by his legislation even these might be excluded at the pleasure of the parties from whom the acquisitions had been derived. By the classical law the father's radical right in his son's *peculium castrense* revived on the latter's death; for if he died intestate the former appropriated it not as his son's heir, but as an owner whose powers as such had been merely temporarily suspended. But by one of the chapters in the famous *Novel* on the law of intestate succession even this prerogative of the *paterfamilias* was abolished, and all a child's belongings except his *peculium profectitium* were recognized as his own in death as well as in life, so that if any of them should pass to his parent on his intestacy it should only be by title of inheritance and in the absence of descendants.

In every other branch of the law of the family the same reforming spirit was manifested. Adoption was no longer followed in all cases by a change of family for the adoptee, but only when the adopter was in fact one of his parents, such as a paternal or maternal grandfather,—when there was a natural *potestas* to underlie and justify the civil one. The modes of legitimization of children born out of wedlock, especially that by subsequent marriage of the parents, first introduced by Constantine, were regulated, and the extent of the rights of the legitimated issue carefully defined. Emancipation was simplified, and the old procedure by sales and manumissions, which degraded the child too much to the level of a slave, dispensed with. Tutorship at law was opened to the pupil's nearest kinsman, whether on the father's side or the mother's; and the mother herself, or the child's grandmother, might be allowed, under certain conditions, to act as its guardian. Slavery was often

converted into the milder condition of colonate; but, even where this did not happen, the rights of owners were not allowed to be abused; for slaves were permitted to claim the protection of the magistrate, and cruelty by a master might result in his being deprived of his human property. Kinship that had arisen between two persons when one or both were slaves (*servilis cognatio*) was recognized as creative not only of disabilities but of rights. The modes of manumission were multiplied, and the restrictions of the legislation of the early empire abolished; and a freedman invariably became a citizen, Junian Latinity and deditionary being no longer recognized.

Amendments on the Law of Property and Obligation.—In the law of property the principal changes of the Christian empire were the property, simplification of the forms of conveyance, the extension of the colonate, the introduction and regulation of emphyteusis, and the remodelling of the law of prescription. Simplification of the forms of conveyance was necessary only in the case of *res mancipi*, for *res nec mancipi* had always passed by delivery. From the Theodosian *Code* it is apparent that movable *res mancipi* usually passed in the same way from very early in the period, and that for the mancipation of lands and houses (for *in jure cessio* had disappeared with the formular system) a *solemnis traditio*, a written instrument and delivery following thereon, and both before witnesses, was gradually substituted. Of this there is no trace in the Justinianian *Code*. For Justinian abolished all remains of the distinction between *res mancipi* and *res nec mancipi*, between full ownership, bonitarian ownership, and *nudum jus Quiritium*, placing movables and immovables on a footing of perfect equality so far as their direct conveyance was concerned. But, as regarded the possession required of an alienee to cure any defect in the conveyance, he made a marked difference between them. For, amalgamating the old positive usucapion of the *jus civile* with the negative "prolonged possession" (*longi temporis possessio*) that had been introduced in the provinces (probably by the provincial edict), he declared that possession on a sufficient title and in good faith should in future make the possessor legal owner of the thing possessed by him, provided that the possession of himself and his author had endured uninterruptedly for three years in the case of a movable, and in the case of an immovable for ten years if the party against whom he possessed was resident in the same province, or for twenty if he resided in another one.

The same causes that led to the colonate induced the introduction of emphyteusis,¹—an institution which had already existed in teusis. some of the Eastern provinces when independent, and which came to be utilized first by the emperors, then by the church, and afterwards by municipalities and private landowners, for bringing into cultivation the large tracts of provincial land belonging to them which were unproductive and unprofitable through want of supervision on the spot. Its nature and conditions were carefully defined by Zeno and amended by Justinian. The *emphyteuta*, as the grantee of the right was called, did not become owner; the grantor still remained *dominus*, all that the grantee enjoyed being a *jus in re aliena*, but *de facto* so extensive as hardly to be distinguishable from ownership. It conferred upon him and his heirs a perpetual right in the lands included in the grant, in consideration of a fixed annual payment to the lord (*canon*) and due observance of conventional and statutory conditions; but he was not entitled to abandon it, nor able to free himself of the obligations he had undertaken, without the lord's consent. The latter was entitled to hold the grant forfeited if the *canon* fell into arrear for three years (in church lands for two), or if the land-tax was in arrear for the same period, or if the *emphyteuta* allowed the lands to deteriorate, or if he attempted to alienate them (*alienare meliorationes*, as the text says) without observance of statutory requirements. These were that he should intimate an intended alienation and the name of the intended alienee to the lord, so that the latter, before giving his assent, might satisfy himself that he would not be a loser by the transaction; and, if the alienation was to be by sale, he had to state the price fixed, so as to give the lord the opportunity of exercising his statutory right of pre-emption at the same figure. If those requirements were complied with, and the lord had no reasonable objection to the proposed alienee, he was not entitled to resist the alienation, provided a payment (*laudemium*) was made to him of two per cent. of the sale-price in consideration of his enforced consent.

The changes in the law of obligation were more superficial than those in the law of property, and consisted principally in the simplification of formalities and in some cases in their entire abolition. To describe them, however, would carry us into details which would here be out of place.

Amendments on the Law of Succession.—The changes made in the Testamentary law of succession by Justinian's Christian predecessors, especially Theodosius II. and Anastasius, were far from insignificant; but successions in his own were in some directions positively revolutionary. The sion. testament *per aes et libram* of the *jus civile* probably never obtained any firm footing in the East; for it was only by Caracalla's con-

¹ See Elia Lattes, *Studi storici sopra il Contratto d'Emphyteus nelle sue relazioni col Colonato*, Turin, 1868, chaps. 1 and 3; and François, *De l'Emphytéose*, Paris, 1880.

stitution conferring citizenship on all his free subjects that provincials generally acquired *testamenti factio*; and by that time a testament bearing externally the requisite number of seals had been recognized as sufficient for a grant of *bonorum possessio*, unchallengeable by the heirs-at-law, even though they were able to prove that neither *familiae emancipatio* nor *testamenti nuncupatio* had intervened. Hence the universal adoption of what Justinian calls the praetorian testament, which, however, underwent considerable reform at the hands of the emperors, notably in the requirement (in the ordinary case) of signature by the testator and subscription by the witnesses. There was much hesitating legislation on the subject before the law was finally established as it stands in the Justinianian books; and even at the last we find it encumbered with many exceptions and reservations in favour of testaments that were merely deeds of division by a parent among his children, testaments made in time of plague, testaments recorded in books of court, testaments entrusted to the safe-keeping of the emperor, and so forth. Codicils had become deeds of such importance as, in the absence of a testament, to be dealt with as imposing a trust on the heir-at-law; it was therefore thought expedient to deny effect to them unless attested by at least five witnesses. And a most important step in advance was taken by Justinian in the recognition of the validity of an oral *mortis causa* trust; for he declared that, if it should be represented to a competent judge that a person on his deathbed had by word of mouth directed his heir-at-law to give something to the complainant, the heir should be required either on his oath to deny the averment or to give or pay what was claimed.

The
118th
novel.

In the matter of intestacy there was long a halting between two opinions,—a desire still further to amend the law in the direction taken by the praetors and by the legislature in the Tertullian and Orphitian senatusconsults, and yet a hesitancy about breaking altogether from the time-hallowed principle of agnation. Justinian in his *Code* went far beyond his predecessors, making a mother's right of succession independent altogether of the *jus liberorum*; extending that of a daughter or sister to her descendants, without any deduction in favour of agnates thus excluded; admitting emancipated collaterals and their descendants as freely as if there had been no *capitis deminutio minima*; applying to agnates the same *successio graduum* that the praetors had allowed to cognates, and so forth. But it was by his *Novels*, especially the 118th and 127th, that he revolutionized the system, by eradicating agnation altogether and settling the canons of descent—which were the same for real and personal estate—solely on the basis of blood kinship, whether through males or females, and whether crossed or not by a *capitis deminutio*. First came descendants of the intestate, male and female alike, taking *per capita* if all were of the same degree, *per stirpes* if of different degrees. Failing descendants, the succession passed to the nearest ascendants, and, concurrently with them, to brothers and sisters of full blood and (by *Nov. 127*) the children of any that had predeceased. Where there were ascendants alone, one-half of the succession went to the paternal line and one-half to the maternal; where there were ascendants and brothers and sisters, or only brothers and sisters, the division was made equally *per capita*; when children of a deceased brother or sister participated it was *per stirpes*. In the third class came brothers and sisters of half-blood or by adoption and their children; the division here was on the same principle as in the second class. The fourth class included all other collaterals according to proximity, and without distinction between full and half blood; the primary division was *per stirpes*, but all of the same degree took *per capita*.

The
115th
novel.

A reform effected by Justinian by his 115th *Novel* ought not to pass unnoticed; for it rendered superfluous all the old rules about disinheritance and praeterition of a testator's children, practically abolished *bonorum possessio contra tabulas*, and established the principle that a child had, as a general rule, an inherent and inalienable right to be one of his father's heirs in a certain share at all events of his succession, and that a parent had the same right in the succession of his child if the latter had died without issue. The enactment enumerated certain grounds upon which alone it should be lawful for a parent to disinherit his child or a child his parent, declaring that in every case of disinheritance the reason of it should be stated in the testament, but giving leave to the person disinherited to dispute and disprove the facts when the testament was opened. If a child who had not been disinherited—and one improperly disinherited was eventually in the same position—was not instituted to at least his "*legitim*" (*legitima* or *debita portio*), he was entitled to have the testament declared null in so far as the institutions in it were concerned, thus opening the succession to himself and the other heirs-at-law, but without affecting the minor provisions, such as bequests, nominations of tutors, &c. The *legitim*, which under the practice of the centumviral court had been one-fourth of the share to which the child would have been entitled *ab intestato*, was raised by Justinian to one-third at least, and one-half where there were five or more entitled to participate. He did not allow challenge of the will to be excluded, as in the earlier *querela inofficiosi testamenti*, because the testator had made

advances to his child during his life or left him a legacy which quantitatively equalled the *legitim*; his idea was that a child was entitled to recognition by his parent as one of his heirs, and that to deny him that position was to put upon him an indignity which the law would not permit.

Amongst the other beneficial changes effected by Justinian may be mentioned the assimilation so far as possible of *hereditas* and *bonorum possessio*, so that the latter might be taken like the former without formal petition for a grant of it; the equiparation of legacies and singular trust-gifts, and the application of some of their rules to *mortis causa* donations; the extension of the rule of "transmission" to every heir without exception, so that, if he died within the time allowed him for considering whether or not he would accept (*tempus deliberandi*), his power of acceptance or declination passed to his heirs, to be exercised by them within what remained of the period; the introduction of entry under inventory (*cum beneficio inventarii*), which limited the heir's responsibilities and rendered unnecessary the nine or twelve months of deliberation; and the application of the principle of collation to descendants generally, so that they were bound to throw into the mass of the succession before its partition every advance they had received from their parent in anticipation of their shares.

IV. THE JUSTINIANIAN LAW-BOOKS.

Their Use in the Courts and in the Schools.—Although the *Institutes* were primarily intended to serve as a text-book in the schools, Justinian it was expressly declared that they and the *Digest* and the *Code* law should be regarded as just so many parts of one great piece of books. legislation and all of equal authority, and that, although *Digest* and *Code* were but collections of legislation and doctrine that had proceeded originally from many different hands, yet they were to be treated with the same respect as if they had been the work of Justinian himself. But, while everything within them was to be held as law, nothing outside them was to be looked at, not even the volumes from which they had been collected; and so far did this go that, after the publication of the revised *Code*, neither the first edition of it nor the *Fifty Decisions* were allowed to be referred to. If a case arose for which no precedent was to be found, the emperor was to be resorted to for its decision, as being outside his collections the only fountain of the law. To preserve the purity of the texts Justinian forbade the use of conventional abbreviations (*sigla*) in making transcripts, visiting an offender with the penalties of falsification (*crimen falsi*). Literal translations into Greek were authorized, and indeed were very necessary for many of his subjects; so were *παράγραφα* or summaries of the contents of individual titles (although the jurists read the word less strictly). Commentaries and general summaries were forbidden under heavy penalties, as an interference with the imperial prerogative of interpretation; but the prohibition does not seem to have been enforced, as we have accounts and remains not only of translations but of commentaries, notes, abridgments, excerpts, and general summaries even in Justinian's lifetime. These, it is true, were mostly by professors (*antecessores*), and their productions may have been intended primarily for educational purposes; but there can be little doubt that they soon passed into the hands of the practitioners and were used without scruple in the courts. A Greek *Paraphrase of the Institutes*, usually attributed to Theophilus, a professor in Constantinople and one of Justinian's commissioners, is commonly supposed to have been used by him in his selections. It embodies much more historical matter than is to be found in the *Institutes*; but its value has been very differently rated by different critics. Its latest editor, Ferrini, who puts a high estimate on it, is of opinion that the original of it was a paraphrase of Gaius, which was remodelled after the plan of Justinian's *Institutes*, and had their new matter incorporated in order to adapt it to the altered conditions; but he doubts if there be any sufficient authority for ascribing it to Theophilus. If he be right in assuming that it was really a redaction of Gaius, the historical explanations will be received with all the more confidence.

Fate of the Justinianian Books in the East.—The literary work indicated in the preceding section was continued throughout the 6th century. But the next three were comparatively barren, the only thing worth noting being the *Ἐκλογὴ τῶν νόμων ἐν συντομίᾳ γενομένη* of Leo the Isaurian in 740, professedly an abstract of the whole Justinianian law amended and rearranged; but it was repealed by Basil the Macedonian on account of its imperfections and its audacious departure from the law it pretended to summarize. The last-named emperor, with his son Leo the Philosopher, set themselves in the end of the 9th and beginning of the 10th centuries to the production of an authoritative Greek version of the whole of the Justinianian collections and legislation, omitting what had become obsolete, excising redundancies, and introducing such of the post-Justinianian legislation as merited preservation. The result was the *Basilica* (τὰ βασιλικά, i.e., νόμματα), which was completed in the reign of Leo, though probably issued in a preparatory stage in the reign of Basil, who also published a sort of institutional work, the *Πρόχειρον*, which was revised and republished by Leo under

the name of Ἐπαναγωγή τοῦ νόμου. The *Basilica* consists of sixty books, subdivided into titles, following generally the plan of the Justinianian *Code*, but with the whole law on any particular subject arranged consecutively, whether from *Digest*, *Code*, or *Novels* (see *BASILICA*, vol. iii. p. 419). Leo's son, Constantinus Porphyrogenitus, made an addition to it in the shape of an official commentary collected from the writings of the 6th-century jurists, the so-called Παράγραφοι τῶν παλαιῶν, which is now spoken of as the *scholia* to the *Basilica*, and has done good exegetical service for modern civilians. The *Basilica* retained its statutory authority until the fall of the Byzantine empire in 1453. But long before that it had practically been abandoned; and not a single complete copy of it exists. Its place was taken by epitomes and compendia, the last being the Εξάβιβλος of Constantinus Harmenopolus of 1345, "a miserable epitome of the epitomes of epitomes," as Bruns calls it, which survived the vicissitudes of the centuries, and finally received statutory authority in the modern kingdom of Greece in the year 1835, in place of the *Basilica*, which had been sanctioned thirteen years before, in 1822.

Their fate in the West.—Before the rise of the Bologna school it was to a much greater extent from the Romano-barbarian codes than from the books of Justinian that central and western Europe derived their acquaintance with Roman law. Theodorici's *Edict* can have had little influence after Justinian's recovery of Italy, and the Romano-Burgundian law was no doubt gradually displaced by the *Breviary* (*Lex Rom. Visigothorum*) after Burgundy had fallen into the hands of the Franks; but the *Breviary* itself found its way in all directions in France and Germany, penetrating even into England, to a great extent through the agency of the church. There must, however, have been other repertoires of Roman law in circulation, as witness a testament made in Paris in the end of the 7th century, preserved by Mabillon, in which the testator uses the old formula of the *jus civile*,—"ita do, ita lego, ita testor, ita vos Quirites testimonium mihi perhibetote,"—words that are not to be found either in the Visigothic or the Justinianian collections.

In his pragmatic sanction of the year 554 Justinian anew accorded his imperial sanction to the *jura* and *leges*, i.e., the *Digest* and *Code*, which he says he had long before transmitted to Italy, at the same time declaring that his *Novels* were to be of the same authority there as in the East. Two years after this came Julian's Latin epitome of them, not improbably prepared by command of the emperor himself. That they all came at once to some extent into use is beyond question; for there is preserved in Marini's collection the testament of one Mannanes, executed at Ravenna in the reign of Justinian's immediate successor Justin II., in which the requirements of both *Code* and *Novels* are scrupulously observed. Of other monuments of the same period that prove the currency of the Justinianian law in Italy several are referred to by Savigny in the second volume of his *History of the Roman Law in the Middle Ages*, among which may be mentioned the Turin gloss of the *Institutes*, which Fitting ascribes to about the year 545, and two little pieces known as the *Dictatum de consiliariis* and the *Collectio de tutoribus*, which form an appendix to some manuscripts of Julian's epitome of the *Novels*, and may possibly have been from his pen. The invasion of the Lombards, the disturbance they caused in Italy for two centuries, and the barrier they formed between it and the rest of Europe militated against the spread of the Justinianian law northwards; but it was taught without much interruption in Ravenna, the seat of the exarchs, to which (but this is doubtful) the school (*studium*) of Rome, revived by Justinian, is said to have been transferred. By the Lombards, as their savagery toned down, the Roman

law was so far recognized that they allowed it to be applied to the Romans living within their territory; and it is said to have even been taught in Pavia, which they had established as their capital. Their overthrow by Charlemagne opened an outlet for it beyond Italy; and in the 9th century there is evidence that the Justinianian books or some of them were already circulating in the hands of the clergy in various parts of Europe. Yet there are very few remains of any literature indicating much acquaintance with them. Almost the only pieces worth mentioning are the so-called *Summa Perusina*, an abridgment of the first eight books of the *Code*, ascribed to the 9th century; the *Quaestiones ac monita*, to the Lombardic laws, drawn mostly from the *Institutes*, but with a few texts from the *Digest*, the *Code*, and Julian's *Epitome*, and supposed to have been written early in the 11th century; the *Brachylogus*, an abbreviated revision of Justinian's *Institutes*, with references to his other books, which is thought to have been written in France (Orleans?), according to Fitting between 999 and 1002, but according to other authorities nearer the end of the 11th century; and the *Petri exceptiones legum Romanarum*, a systematic exposition of the law in four books, written in the south of France early in the latter half of the 11th century, and mostly compiled from Justinianian sources.

It was in the very end of the 11th century or the beginning of the 12th that at Bologna, and under one Irnerius, who appears not to have been a professional jurist but originally a teacher of letters, the study of Roman law began somewhat suddenly to attract students from all parts of the world. Through the action of the clergy the only parts of the Justinianian legislation that had hitherto been in ordinary use were the *Institutes*, the *Code*, and the *Novels*. The first, from its elementary character, had naturally commended itself; the *Code*, with its opening title on the Trinity and its second on Holy Church, and the *Novels*, with their abundant legislation on matters ecclesiastical, were in many respects charters of the church's privileges, and were prized accordingly; but the *Digest*, as being the work of pagan jurists, had been practically ignored. The *Code* and the *Novels*, however, with their modicum of wheat concealed in such a quantity of chaff, offered little attraction to laymen of intelligence; and, when a copy of a portion of the *Digest*, with its infinitely purer diction and its clear and incisive reasoning, came into the hands of Irnerius, it must have been for him as a new revelation. The text of it seems to have reached him by instalments; at least this is the only reasonable explanation of its division by the glossarists (as Irnerius and his successors of the Bologna school were called, the name being derived from the *glossae*, notes marginal and interlinear, with which they furnished it) into three parts, *Digestum Vetus* (books 1 to 24, tit. 2), *Infirmitatum*, and *Digestum Novum* (book 39 to the end), the general idea being that, after first the old and then the new *Digest* had come to light, the connecting link unexpectedly turned up, and got in consequence the somewhat singular name by which it continued to be known for centuries. The whole collection was by the glossarists distributed in five volumes, the fourth containing the first nine books of the *Code*, and the fifth, called *Volumen parvum legum*, containing the *Institutes*, a Latin translation of 134 of the *Novels* known as the *Authenticum*, and the last three books of the *Code* which had been recovered subsequently to the others. With these five volumes, the teaching that accompanied them, and the *glossae*, *summae*, *casus*, *brocarda*, &c., with which they were enriched from the rise of the school with Irnerius till its close with Franciscus Accursius in 1260, Roman jurisprudence began a new career, which it would carry us beyond the limits of this article to attempt to trace even in meagrest outline.¹ (J. M*.)

ROMAN LITERATURE

IT would be impossible within the limits allowed for this article to attempt, even in outline, any history of the course of Roman literature which would include an account, not only of the extant works which it contains and of their authors, but also of the principal works and writers known to us from ancient testimony. The mere enumeration of these in chronological order, without some attempt to ascertain their individual features and to estimate their relation to the intellectual movement of their time, could be of no interest or use to any one. All that is possible to accomplish here is to pass in rapid review the first four of the five periods into which Roman literature may most conveniently be divided, to ascertain the chief literary motives and characteristics of each, and to connect these with the works and writers in whom they

are most conspicuously displayed. It will be unnecessary to give any biographical account even of the greatest authors or to criticize their works in detail, as these have been sufficiently treated in separate articles of the present work. The object of the following survey will be to obtain some appreciation of the relation in which the

¹ The great authority on the matter of this section is still Savigny's *Gesch. d. röm. Rechts im Mittelalter*, 7 vols., 2d. ed., Heidelberg, 1834-51; but much additional light has been thrown on it by Merkel, Stintzing, Blume, Fitting, Bruns, Mommsen, Krüger, Ficker, Rivier, Conrat (Cohn), and others, whose writings, mostly in periodicals, are too numerous to mention. On the early traces of Roman law in England, see Amos, *History and Principles of the Civil Law of Rome*, London, 1883, p. 443 sq.; Caillemier, *Le Droit Civil dans les provinces Anglo-Normandes*, Caen, 1883; Scrutton, *The Influence of the Roman Law on that of England*, Cambridge, 1885.

individual authors noticed stand to the whole subject, *i.e.*, to the collective literary expression, so far as they found an expression, of the action, the ideas, the character, the various feelings, passions, and moods, of ancient Rome and of the races which it absorbed, so long as that literature has a distinct unity and individuality.

Early
forms.

The actual beginning of Roman artistic literature can be assigned to a definite date, the year 240 B.C., when Livius Andronicus produced on a Roman stage a drama with a regular plot, instead of the unconnected dramatic dialogues (*saturæ*) by which the holidays of the people had previously been enlivened. Yet the germs of an indigenous literature had existed independently at an earlier period in Rome and in the country districts of Italy. Although these cannot be said to have exercised any marked influence on the subsequent development of literature, they have an importance as indicating natural wants in the Italian race, which were ultimately satisfied by regular literary forms. The art of writing was first employed in the service of the state and of religion for the preservation of the sacred hymns, books of ritual, treaties with other states, the laws of the XII. Tables, &c. An approach to literature was made in the *Annales Maximi*, although it cannot be supposed that the pontifex maximus in drawing up the dry records of the prodigies and events of the year had any thought of gratifying intellectual curiosity or imparting intellectual pleasure. But in the satisfaction they afforded to the commemorative and patriotic instincts they anticipated an office afterwards performed by the national epics and the works of regular historians. A still nearer approach to literature was probably made in oratory, as we learn from Cicero that in the generation before the first regular dramatic representation a speech delivered by Appius Claudius Cæcus was given to the world. Appius was also the author of a poem of an ethical and didactic character, which Cicero tells us (*Tusc.*, v. 2, 4) was praised by Panætius. No other name associated with any form of literature belonging to the pre-literary age has been preserved by tradition, and it is to be borne in mind that Appius lived on till the wars with Pyrrhus, when the first active collision between Rome and Greece took place. This premature stirring of literary ambition is like the occasional anticipation by individual thinkers of some important discovery or some great intellectual movement before the world around them is ready to receive it.

But it was rather in extemporaneous effusions than in written compositions that some germs of a native poetry might have been detected. The most genuine indication of that impulse which ultimately finds its realization in artistic literature appears in the use of a metre of pure native origin, the Saturnian, which by its rapid and lively movement gives expression to the vivacity and quick apprehension of the Italian race. This metre appears to have been first used in ritual hymns, which seem to have assumed definite shapes out of the exclamations of a primitive priesthood engaged in a rude ceremonial dance. It was also employed by a class of bards or itinerant soothsayers known by the name of "vates." It was used also in the "Fescennine verses," which gave expression to the coarse gaiety of the people and to their strong tendency to personal raillery and satiric comment. This tendency, which under the stern censorship of the patrician rulers of the early republic was repressed by stringent laws, found ultimately its legitimate outlet in Roman satire. The metre was also employed in commemorative poems, accompanied with music, which were sung at funeral banquets in celebration of the exploits and virtues of distinguished men. These had their origin in the same impulse which ultimately found its full gratification in Roman history,

Roman epic poetry, and that form of Roman oratory known as "laudationes," and in some of the *Odes* of Horace. The latest and probably the most important of these rude and inchoate forms was that of dramatic *saturæ* (medleys), put together without any regular plot, and consisting apparently of contests of wit and satiric invective, and perhaps of comments on current events, accompanied with music ("saturas impletas modis," Liv., vii. 2). These have a real bearing on the subsequent development of Roman literature. They prepared the mind of the people for the reception of regular comedy. They may have contributed to the formation of the style of comedy which appears at the very outset much more mature than that of serious poetry, tragic or epic. They gave the name and some of the characteristics to that special literary product of the Roman soil, the "satura," addressed to readers, not to spectators, which ultimately was developed into pure poetic satire in Lucilius, Horace, Persius, and Juvenal, into the prose and verse miscellany of Varro, and into something approaching the prose novel in Petronius.

First Period: from 240 to about 80 B.C.

The historical event which brought about the greatest change in the intellectual condition of the Romans, and thereby exercised a decisive influence on the whole course of human culture, was the capture of Tarentum in 272. After the capture many Greek slaves were brought to Rome, and among them the young Livius Andronicus, ^{Livius Andronicus.} who was employed in teaching Greek in the family of his master, a member of the Livian gens. From that time to learn Greek became a regular part of the education of a Roman noble. The capture of Tarentum was followed by the complete Romanizing of all Southern Italy. Soon after came the First Punic War, the principal scene of which was Sicily, where, from common hostility to the Carthaginian, Greek and Roman were brought into friendly relations, and the Roman armies must have become familiar with the spectacles and performances of the Greek theatre. In the year following the conclusion of the war (240), after the armies had returned and the people were at leisure to enjoy the fruits of victory ("et post Punica bella quietus," Hor., *Ep.*, ii. 162), Livius Andronicus "took the bold step" ("ausus est primus argumento fabulam serere," Liv., vii. 2) of substituting at one of the public festivals a regular drama translated or adapted from the Greek for the musical medleys (*saturæ*) hitherto in use. From this time dramatic performances became a regular accompaniment of the public games, and came more and more to encroach on the older kinds of amusement, such as the chariot races. The dramatic work of Livius was, however, merely educative; it can hardly be called in any sense of the word literary. The same may be said of his later work, which was still used as a school-book in the days of Horace,—the translation of the *Odyssey*; and probably the religious hymn which he was called upon to compose in the latter part of the Second Punic War had no higher literary pretension. He was, however, the first to make the old name of poet a title of honour instead of reproach; and by familiarizing the Romans with the forms of the Greek drama and the Greek epic he determined the main lines which Roman literature followed for more than a century afterwards.

His immediate successor, Cn. Nævius, was not, like Nævius. Livius, a Greek, but either a Roman citizen or one who enjoyed the limited citizenship of a Latin, and who had served in the Roman army in the First Punic War. His first appearance as a dramatic author was in 235. He adapted both tragedies and comedies from the Greek, but the bent of his genius, the tastes of his audience, and the condition of the language, developed through the active

intercourse and business of life, gave a greater impulse to comedy than to tragedy. Nævius tried to use the theatre, as it had been used by the writers of the Old Comedy of Athens, for the purposes of political warfare, and thus seems to have anticipated by a century the part played by Lucilius. Satiric and censorious criticism rather than a humorous sense of the comedy of human life and character was apparently the chief motive of his representation. But the state censorship, which in a more revolutionary time tolerated the free criticism of public men in works addressed to a select class of readers, arrested at the outset all such criticism addressed to the mass of the people assembled in the theatre; and Nævius, after being imprisoned, had to retire in his old age into banishment. He was not only the first in point of time, and according to ancient testimony one of the first in point of merit, among the comic poets of Rome, and in spirit, though not in form, the earliest of the line of Roman satirists, but he was also the oldest of the national poets. Besides celebrating the success of Marcellus in 225 over the Gauls in a play called *Clastidium*, he gave the first specimen of the "fabula prætecta" in his *Alimonium Romuli et Remi*, based on the most national of all Roman traditions. Still more important service was rendered by him in his long Saturnian poem on the First Punic War, in which he not only told the story of contemporary events but gave shape to the legend of the settlement of Æneas in Latium,—the theme ultimately adopted for the great national epic of Rome.

Plautus. His younger contemporary Plautus (d. 184) was the greatest comic and dramatic genius of Rome, and is still read as one of the great comic and dramatic writers of the world. He lived and wrote only to amuse his contemporaries, and thus, although more popular in his lifetime and more fortunate than any of the older authors in the ultimate survival of a large number of his works, he is less than any of the great writers of Rome in sympathy with either the serious or the caustic spirit in Roman literature. Yet he is the one extant witness to the humour and vivacity of the Italian temperament at a stage between its early rudeness and rigidity and its subsequent degeneracy.

Thus far Roman literature, of which the predominant characteristics are dignity, gravity, and fervour of feeling, and which more than any other literature aimed at fortifying and elevating the character, seemed likely to become a mere vehicle of amusement adapted to all classes of the people in their holiday mood. But a new spirit came over the Italian Camenæ in the time of Plautus, which henceforth became predominant. Roman literature ceased to be in close sympathy with the popular spirit, either in political partisanship or in ministering to general amusement, but became the expression of the ideas, sentiment, and culture of the aristocratic governing class. It was by Q. Ennius (239-169) of Calabria that a new direction was given to Roman literature and new and deeper springs of emotion were elicited from the native genius. Deriving from his birthplace the culture, literary and philosophical, of Magna Græcia, having served with distinction in the Roman armies, and gained the friendship of the greatest of the Romans living in that great age, he was of all the early writers most fitted to be the medium of conciliation between the serious genius of ancient Greece and the serious genius of Rome. Alone among the older writers he was endowed with the gifts of a poetical imagination and animated with enthusiasm for a great ideal. With the widest culture and knowledge among all the men of his generation, he had also the justest discernment of the relation of culture and knowledge to actual life and to the work which he had to accomplish.

First among his special services to Roman literature was the fresh impulse which he gave to tragedy. He turned

the eyes of his contemporaries from the commonplace social humours of later Greek life to the contemplation of the heroic age. But he did not thereby denationalize the Roman drama. He animated the heroes of early Greece with the martial spirit of Roman soldiers and the ideal magnanimity and sagacity of Roman senators, and imparted weight and dignity to the language and verse in which their sentiments and thoughts were expressed. Although Rome wanted creative force to add a great series of tragic dramas to the literature of the world, yet the spirit of elevation and moral authority breathed into tragedy by Ennius passed into the ethical and didactic writings and the oratory of a later time.

Another work, the *πάρεργον* of his serious activity, was the *satura*, written in various metres, but chiefly in that which came nearest to the spoken language of Rome, the trochaic tetrameter. He thus became the inventor of a new form of literature; and, if in his hands the *satura* was rude and indeterminate in its scope, it was a proof of the practical bent of his understanding that he found a vehicle by which to address a reading public on matters of the day, or on the materials of his wide reading, in a style not far removed from the language of common life. His greatest work, which made the Romans regard him as the father of their literature, was his epic poem, in eighteen books, the *Annales*, in which the record of the whole career of Rome was unrolled with idealizing enthusiasm and realistic detail. The idea which inspired Ennius was ultimately realized in both the national epic of Virgil and the national history of Livy. And the metrical vehicle which he conceived as the only one adequate to his great theme was a rude experiment, which was ultimately developed into "the stateliest metre ever moulded by the lips of man." Even as a grammarian he performed an important service to the literary language of Rome, by fixing its prosody and arresting the tendency to decay in its final syllables. Although we know his writings only in fragments, these fragments are enough, along with what we know of him from ancient testimony, to justify us in regarding him as the most important among the makers of Roman literature,—the most important indeed among Roman authors before the age of Cicero.

There is still one other name belonging partly to this, Cato, partly to the next generation to be added to those of the men of original force of mind and character who created Roman literature, that of M. Porcius Cato (234-149), the younger contemporary of Ennius. More than Nævius and Plautus he represented the pure native element in that literature, the mind and character of Latium, the plebeian pugnacity, which was one of the great forces in the Roman state. He had no poetic imagination, and set himself in antagonism to the literature of imagination created by Ennius. He strove to make literature ancillary to politics and to objects of practical utility, and thus started prose literature on the main lines which it afterwards followed. Through his industry and vigorous understanding he gave a great impulse to the creation of Roman oratory, history, and systematic didactic writing. He was one of the first to publish his speeches and thus to bring them into the domain of literature. Cicero speaks of 150 of these speeches as extant in his day. He praises them for their acuteness, their wit, their conciseness. He speaks with emphasis of the impressiveness of Cato's eulogy and the satiric bitterness of his invective. As an orator he seems to have been akin in spirit to Nævius and Lucilius, and to the last genuine representative of the native temper in literature, the satirist Juvenal.

Porcius Cato also heads the roll of the Roman historians, at least of those whose works were ranked as literature. His *Origines*, the work of his old age, was written with

that thoroughly Roman conception of history which regards actions and events not in relation to their causes or their general human interest but as incidents in the continuous and progressive life of the state. Such is the conception of the past in Livy and Tacitus, and in Ennius and Virgil. But in one respect Cato seems to have formed a truer conception of his subject than any of these writers except Virgil, who, availing himself of the labours of Cato, realized and perfected his conception. Cato felt that the record of Roman glory could not be isolated from the story of the other Italian communities, which, after fighting against Rome for their own independence, shared with it the task of conquering the world. To the wider national sympathies which stimulated the researches of the old censor into the legendary history of the Italian towns we owe some of the most truly national parts of the *Aeneid*. There is another point of contact between the work done by Cato and that of Virgil, although they may be regarded as the most dissimilar in intellectual and imaginative gifts in the whole range of Roman literature, the one being the most realistic and prosaic, the other the most idealistic and imaginative. While the ideal charm of the old rural life and industry of Italy still lives in the *Georgics*, the practical utilitarian prose of that life may best be learned from the *De Re Rustica* of Cato.

Nævius, Plautus, Ennius, and Cato not only represent but may be said actually to have been the contending forces which strove for ascendancy in determining what was to be the character of the new literature. Although their combined activity was spread over nearly a century, yet so vigorous was their vitality and so prolonged their career that they may be spoken of as contemporaries. Cato, the youngest of the four, was a man of mature years, actively engaged in the service of the state, when Nævius was still in the full vigour of his powers, and before Plautus had reached the most productive period of his career. It is characteristic of the time that the genius of all these writers was ripest in their old age. They were thus able partially to overcome the difficulties incident to the beginning of their art. They acquired by the rude attempts of their earlier activity the faculty which they exercised with unabated natural force till the end of their lives. In their prolonged career of intellectual energy they remind us of some of the early philosophers and travellers of Greece. The work begun by them was carried on by younger contemporaries and successors, that of Plautus by Cæcilius Statius and others, the tragedy of Ennius by his kinsman, Pacuvius, and, in the following generation, by Accius. The impulse given to oratory by Cato, Sulpicius Gallus, and others, and along with it the development of prose composition, went on with increased momentum till the age of Cicero. But the interval between the death of Ennius (169) and the beginning of Cicero's career, while one of progressive advance in the appreciation of literary form and style, was much less distinguished by original force than the time immediately before and

Terence. after the end of the Second Punic War. The one complete survival of the generation after the death of Ennius, the comedy of Terence (185-159), exemplifies the gain in literary accomplishment and the loss in literary freedom. Terence has nothing Roman or Italian except his pure and idiomatic Latinity. His relation to the Greek authors whom he copied is that of a fine engraver to the great painters of another age and time. The Athenian elegance of Terence affords the strongest contrast to the Italian rudeness of Cato's *De Re Rustica*. By looking at them together we understand how much the comedy of Terence was able to do to refine and humanize the manners of Rome, but at the same time what a solvent it was of the discipline and ideas of the old republic. What makes Terence an

important witness of the culture of his time is that he wrote from the centre of the Scipionic circle, in which what was most humane and liberal in Roman statesmanship was combined with the appreciation of what was most vital in the Greek thought and literature of the time. Cicero tells us that the peculiar glory of that age was the purity of its Latinity; and it is natural to ascribe to the members of that aristocracy of birth and culture the sentiment ascribed to Cæsar a century later, that to maintain the purity of the Latin tongue was due to the sense both of personal and of national dignity. The comedies of Terence may therefore be held to give some indication of the tastes of Scipio, Lælius, and their friends in their youth. The influence of Panætius and Polybius was more adapted to their maturity, when they led the state in war, statesmanship, and oratory, and when the humaner teaching of Stoicism began to enlarge the sympathies of Roman jurists. But in the last years during which this circle kept together a new spirit appeared in Roman politics and a new power in Roman literature,—the revolutionary spirit evoked by the Gracchi in opposition to the long-continued ascendancy of the senate, and the new power of Roman satire, which was exercised impartially and unsparingly against both the excesses of the revolutionary spirit and the arrogance and incompetence of the extreme party among the nobles. Roman satire, though in form a legitimate development of the indigenous dramatic *satura* through the written *satura* of Ennius and Pacuvius, is really a birth of this time, and its author was the youngest of those admitted into the intimacy of the Scipionic circle, C. Lucilius of Lucilius. Aurunca (166? 1-102). Among the writers before the age of Cicero he alone deserves to be named with Nævius, Plautus, Ennius, and Cato as a great originative force in literature. For about thirty years the production of the satires of Lucilius, in which the politics, morals, society, and letters of the time were criticized with the utmost freedom and pungency, and his own personality was brought immediately and familiarly before his contemporaries, was much the most important event in Roman literature. The years that intervened between his death and the beginning of the Ciceronian age are singularly barren in works of original value.

The general results of the last fifty years of the first General period, from c. 130 to c. 80, may be thus summed up. In results from 130 to 80. poetry we have the satires of Lucilius, the tragedies of Accius and of a few successors among the Roman aristocracy, who thus exemplified the affinity of the Roman stage to Roman oratory; the "comœdia togata" of Afranius, in which comedy, while assuming a Roman dress, did not assume the virtue of a Roman matron; various annalistic poems intended to serve as continuations of the great poem of Ennius; minor poems of an epigrammatic and erotic character, unimportant anticipations of the Alexandrian tendency operative in the following period; works of criticism in trochaic tetrameters by Porcius Licinus and others, forming part of the critical and grammatical movement which almost from the first accompanied the creative movement in Roman literature, and which may be regarded as rude precursors of the didactic epistles that Horace devoted to literary criticism.

The only extant prose work which may be assigned to the end of this period is the treatise on rhetoric known by the title *Ad Herennium*, a work indicative of the attention bestowed on prose style and rhetorical studies during the last century of the republic, and which may be regarded as a precursor of the oratorical treatises of Cicero in the following generation and of the work of Quintilian in the first century of the empire. But the great literary pro-

¹ The reasons for rejecting the date usually assigned to his birth (148) have been given under the heading LUCILIUS.

Oratory. duct of this period was oratory, developed indeed with the aid of these rhetorical studies, but itself the immediate outcome of the imperial interests, the legal conflicts, and the political passions of that time of agitation. The speakers and writers of a later age looked back on Scipio and Lælius, the Gracchi and their contemporaries, L. Crassus and M. Antonius, as masters of their art. We can only judge of what they were by the fame of their speeches and a few unimportant fragments. But as we infer from the artistic excellence of the Homeric poems that many poets of power and genius, whose names were soon forgotten, preceded the great master; as we know that the art of Shakespeare did not come without due preparation into the world; so from the mature perfection of the art of Cicero we may, in a measure, judge of the power and accomplishment of the orators who came before him, from whom he professes to have learned much, and whom he regarded with generous admiration.

History. In history, regarded as a great branch of prose literature, it is not probable that much was accomplished, although, with the advance of oratory and grammatical studies, there must have been not only greater fluency of composition but the beginning of a richer and more ornate style. Yet Cicero, so candid and indulgent in his estimate of early Roman poetry and oratory, denies to Rome the existence, before his own time, of any adequate historical literature. Nevertheless it was by the work of a number of Roman chroniclers during this period that the materials of early Roman history were systematized, and the record of the state, as it was finally given to the world in the artistic work of Livy, was extracted from the early annals, state documents, and private memorials, combined into a coherent unity, and supplemented by invention and reflexion. There were also special works on Roman antiquities and contemporary memoirs, which formed the sources of future historians.

Summary of the period. Although the artistic product of the first period of Roman literature which has reached us in a complete shape is limited to the comedies of Plautus and Terence, the influence of the lost literature in determining the spirit, form, and style of the eras of more perfect accomplishment which followed is unmistakable. While humour and vivacity, which were not surpassed in the more advanced stages of literature, had characterized the earlier, and an urbanity of tone, with which Horace by frequent imitation acknowledges his sympathy, characterizes the later development of comedy, the tendency of serious literature had been in the main practical, ethical, commemorative, and satirical. The higher poetical imagination had appeared only in Ennius, and had been called forth in him by sympathy with the grandeur of the national life and the great personal qualities of its representative men. Some of the chief motives of the later poetry, such as the love of nature and the pleasures and sorrows of private life, had as yet found scarcely any expression in Roman literature. The fittest metrical vehicle for epic, didactic, and satiric poetry had been discovered, but its movement was as yet rude and inharmonious. The idiom of ordinary life and social intercourse and the more fervid and elevated diction of oratorical prose had made great progress, but the language of imagination and poetical feeling was, if vivid and impressive in isolated expressions, still incapable of being wrought into consecutive passages of artistic composition. Although the impulse which awoke the literary energy of Rome had come from the semi-Greeks of the south of Italy, the character of the literature was in the main Roman and Latin; and to this may be attributed the preponderance of the prosaic over the poetical element in it. The Sabellian races of central and eastern Italy and the Italo-Celtic and Venetian races

of the north, in whom the poetic susceptibility of Italy was most manifest two generations later, were not, until after the Social War, sufficiently in sympathy with Rome, and were probably not as yet sufficiently educated to induce them to contribute their share to the national literature. Hence the end of the Social War, and of the Civil War which arose out of it, is most clearly a determining factor in Roman literature, and may most appropriately be taken as marking the end of one period and the beginning of another.

Second Period: from 80 to 42 B.C.

The last age of the republic coincides with the first half of the Golden Age of Roman literature. It is generally known as the Ciceronian age from the name of its greatest literary representative, whose activity as a speaker and writer was unremitting during nearly the whole period. It is the age of purest excellence in prose, and of a new birth of poetry, characterized rather by great original force and artistic promise than by perfect accomplishment. The five chief representatives of this age who still hold their rank among the great classical writers are Cicero, Cæsar, Sallust, Lucretius, and Catullus. The works of other prose writers, Varro and Cornelius Nepos, have been partially preserved; but these writers have no claim to rank with those already mentioned as creators and masters of literary style. Although literature had not as yet become, as it did in the age of Martial, and to a certain extent in the age represented in the *Epistles* of Horace, a trade or profession, an educated reading public already existed, and books and intellectual intercourse filled a large part of the leisure of men actively engaged in affairs. Even oratory was intended quite as much for readers as for the audiences to which it was immediately addressed; and some of the greatest speeches which have come down from that great age of orators were never delivered at all, but were published as manifestoes after the event with the view of influencing educated opinion, and as works of art with the view of giving pleasure to educated taste.

Thus the speeches of Cicero (106-43), more certainly than Cicero. any modern speeches, belong to the domain of literature quite as much as to that of forensic or political oratory. And, although Demosthenes is a master of style unrivalled even by Cicero, the literary interest of most of Cicero's speeches is greater than that of the great mass of Greek oratory,—a result of what from a forensic point of view would now be regarded as a serious defect. Thus it is with justice urged that the greater part of the *Defence of Archias* was irrelevant to the issue and would not have been listened to by a Greek court of justice or a modern jury. But it was fortunate for the interests of literature that a court of educated Romans could be influenced by the considerations there submitted to them. In this way a question of the most temporary interest, concerning an individual of no particular eminence or importance, has produced one of the most impressive vindications of literature ever spoken or written. Oratory at Rome assumed a new type from being cultivated as an art which endeavoured to produce persuasion not so much by intellectual conviction as by appeal to those general human sympathies which are the subject-matter with which literature has to deal. In oratory, as in every other intellectual province, the Greeks had a truer sense of the limits and conditions of their art. But command over form is only one element in the making of an orator or poet. The largeness and dignity of the matter with which he has to deal is at least as important. The Roman oratory of the law courts had to deal not with petty questions of disputed property, of fraud, or violence, but with great imperial questions, with matters affecting the wellbeing of large provinces and the honour and safety

of the republic; and no man ever lived who, by the intensity of his patriotic and imperial feeling, by his practical experience of great affairs, and by the largeness of his human sympathies, was better fitted than Cicero to be the representative of the type of oratory demanded by the condition of the later republic. He elevates nearly every subject with which he deals, in those speeches at least which he thought worthy of preservation, by connecting it with great political or imperial issues. But with the patriotic motive of his speeches there is generally combined a great moral motive. Whatever were the weaknesses and faults of his personal character, no man of antiquity had higher ethical aspirations. Nowhere is the Roman ideal of character humanized by Greek studies presented with more impressiveness than in the speeches of Cicero. In no writer ancient or modern do we find a greater power of moral indignation. And, while he inveighed against the enormities of the man whom he accused with the grave rebuke of a censor as well as the passion of a personal enemy, no advocate could feel or awaken in others a keener sympathy with the fortunes and the character of the man whom he was defending.

To his great artistic accomplishment, perfected by practice and elaborate study, to the power of his patriotic, his moral, and personal sympathies, and his passionate emotional nature, must be added his vivid imagination and the rich and copious stream of his language, in which he had no rival among Roman writers or speakers.¹ He realizes with the imagination of a great dramatist the personages of his story, their feelings and motives, and the minutest details of their action. It has been said that Roman poetry has produced few, if any, great types of character. But the Verres, Catiline, Antony of Cicero are living and permanent types. The story told in the *Pro Cluentio* may be true or false, but the picture of provincial crime which it presents is vividly dramatic.

Had we only known Cicero in his speeches we should have ranked him with Demosthenes as one who had realized the highest literary ideal, and thereby secured immortality to an art the effect of which is not often perpetuated. We should think of him also as the creator and master of Latin style,—the writer by whom the amplest, most passionate, and most living powers of the language had been called forth and combined into a great and orderly literary organ. We know him, moreover, not only as a great orator but as a just and appreciative critic of oratory. But to his services to Roman oratory we have to add his services not indeed to philosophy but to the literature of philosophy, and his application to the exposition of his doctrines of the calmer and more equable resources of the language. If not a philosopher he is an admirable interpreter of those branches of philosophy which are fitted for practical application, and he presents us with the results of Greek reflexion vivified by his own human sympathies and his large experience of men. In giving a model of the style in which human interest can best be imparted to abstract discussions, he has used his great oratorical gift and art to persuade the world to accept the most hopeful opinions on human destiny and the principles of conduct most conducive to elevation and integrity of character.

The *Letters* of Cicero are the best either in his own or in any other language. They are thoroughly natural,—“colloquia absentium amicorum,” to use his own phrase. In nearly all other published correspondence there is some medium which interrupts the natural outlet of the man, something of literary mannerism, natural reserve, academic elaborateness, and after-thought. Cicero's letters to Atticus and to the friends with whom he was completely at his

ease are the most sincere and immediate expression of the thought and feeling of the moment. They let us into the secret of his most serious thoughts and cares, and they give a natural outlet to his vivacity of observation, his wit and humour, his kindness of nature. It shows how flexible an instrument Latin prose had become in his hand, when it could in accordance with the conditions of perfect literary taste do justice at once to the ample and vehement volume of his oratory, to the calmer and more rhythmical movement of his philosophical meditation, and to the natural interchange of thought and feeling in the everyday intercourse of life.

Among the many rival orators of the age the most eminent were Hortensius and Cæsar. The former, like other members of the aristocracy, such as Memmius and Torquatus, and like Q. Catulus in the preceding generation, was a kind of dilettante poet and a precursor of the poetry of pleasure, which attained such prominence in the elegiac poets of the Augustan age. Of Julius Cæsar (100-44) as an orator we can judge only by his reputation and by the testimony of his great rival and adversary Cicero; but we are able to appreciate the special praise of perfect taste in the use of language attributed to him.² In his *Commentaries*, by laying aside the ornaments of oratory,³ he created the most admirable style of prose narrative, the style which presents interesting events in their sequence of time and dependence on the will of the actor, rapidly and vividly, with scarcely any colouring of personal or moral feeling, any oratorical passion, any pictorial illustration. While he shows the persuasive art of an orator by presenting the subjugation of Gaul and his own action in the Civil War in the light most favourable to his claim to rule the Roman world, he is entirely free from the Roman fashion of self-laudation or disparagement of an adversary. Yet the character of the man is stamped on every line that he writes, and reveals itself especially in a perfect simplicity of style, the result of the clearest intelligence and the strongest sense of personal dignity. He avoids not only every unusual but every superfluous word; and, although no writing can be more free from rhetorical colouring, yet there may from time to time be detected a glow of sympathy, like the glow of generous passion in Thucydides, the more effective from the reserve with which it betrays itself whenever he is called on to record any act of personal heroism or of devotion to military duty.

In the simplicity of his style, the directness of his Sallust narrative, the entire absence of any didactic tendency, Cæsar presents a marked contrast to another prose writer of that age,—the historian Sallust (87-34). Like Varro, he survived Cicero by some years, but the tone and spirit in which his works are written assign him to the republican era. He was the first of the purely artistic historians, as distinct from the annalists and the writers of personal memoirs. He imitated the Greek historians in taking particular actions—the *Jugurthian War* and the *Catilinarian Conspiracy*—as the subjects of artistic treatment. He wrote also a continuous work, *Historiæ*, treating of the events of the twelve years following the death of Sulla, of which only fragments are preserved. His two extant works are more valuable as artistic studies of the rival parties in the state and of personal character than as trustworthy narratives of facts. His style aims at effectiveness by pregnant expression, sententiousness, archaism. He produces the impression of caring more for the manner of saying a thing than for its truth. Yet he has great value as a painter of historical portraits, some of them those of his contemporaries, and as an author who had

¹ “Qui non illustravit modo sed etiam genuit in hac urbe dicendi copiam” (Cic., *Brut.*, 78).

² “Latine loqui elegantissime.”

³ “Nudi enim sunt, recti et venusti, omni ornatu orationis tanquam veste detracto” (Cicero).

been a political partisan and had taken some part in making history before undertaking to write it; and he gives us, from the popular side, the views of a contemporary on the politics of the time.

In following the development of Roman literature we have seen it become the prose organ of great affairs, but since the appearance of the *Annals* of Ennius, in whom the poetry of national life had originated, no work of great and original poetical genius had appeared. The powerful poetical force which for half a century continued to be the strongest force in literature, and which created masterpieces of art and genius, first revealed itself in the latter part of the Ciceronian age. The strength with which it burst forth seems indicative of latent sources of imaginative feeling and conception long suppressed in the Italian temperament, owing perhaps to the absorption of the mind and passion of the race in war, politics, and practical affairs. The conditions which enabled the poetic genius of Italy to come to maturity in the person of Lucretius (99-55) were entire seclusion from public life and absorption in the ideal pleasures of contemplation and artistic production. He produces the impression of a man so possessed by intellectual and imaginative enthusiasm as to have separated himself from the active interests and social pleasures of his time, and to have passed that period of his life which was given to literary production in studying the laws and watching the spectacle of nature, and in the active exercise of imaginative thought on the problems of human life. This isolation from the familiar ways of his contemporaries, while it was, according to tradition and the internal evidence of his poem, destructive to his spirit's health, resulted in a work of genius, unique in character, which was a second birth of imaginative poetry in Italy, and still stands forth as the greatest philosophical poem in any language. In the form of his poem he followed a Greek original; and the stuff out of which the texture of his philosophical argument is framed was derived from Greek science; but all that is of deep human and poetical meaning in the poem is his own. His sense of the grace and beauty of language had indeed been educated by the sympathetic study of Homer and Euripides; but the philosophical guidance which he followed and his reverence for his guide were rather a hindrance than an aid to his art, and were the cause of his presenting the pure ore of his own genius overlaid with great masses of alien alloy. While we recognize in the *De Rerum Natura* some of the most powerful poetry in any language and feel that few poets have penetrated with such passionate sincerity and courage into the secret of nature and some of the deeper truths of human life, we must acknowledge that, as compared with the great didactic poem of Virgil, it is crude and unformed in artistic design, and often rough and unequal in artistic execution. Yet, apart altogether from its independent value, by his speculative power and enthusiasm, by his revelation of the life and spectacle of nature, by the fresh creativeness of his diction and the elevated movement of his rhythm, he exercised a more powerful influence than any other on the art of his more perfect successors.

While the imaginative and emotional side of Roman poetry was so powerfully represented by Lucretius, attention was directed to its artistic side by a younger generation, who moulded themselves in a great degree, though not exclusively, on Alexandrian models. Of this small group of poets, who were bound together by common tastes and friendship, one only has survived, fortunately the man of most genius among them, Valerius Catullus (84¹-54). He too was a new force in Roman literature.

¹ The reasons for accepting 84 rather than 87 as the date of his birth have been given in the article CATULLUS.

Although of a family probably originally Roman, and although brought early in his career into intimate relations with members of the great Roman families, he was a provincial by birth, and was apparently moved in his earliest youth by that fresh enthusiasm for culture which in his own and the following generation enabled Cisalpine Gaul to do so much to enrich Roman literature. His nature, in which sensuous passion and warm affection were united, made him fall a victim to the fascinations of the famous Clodia, whom he has celebrated, under the name of Lesbia, in some of the most powerful and charming love poetry found in any language. The subjects of his best art are taken immediately from his own life,—his loves, his friendships, his travels, his animosities, personal and political. His most original contribution to the substance of Roman literature was that he first shaped into poetry the experience of his own heart, as it had been shaped by Alcæus and Sappho in the early days of Greek poetry. No poet has surpassed him in the power of vitally reproducing the pleasure and pain of the passing hour, not recalled by idealizing reflexion as in Horace, nor overlaid with mythological ornament as in Propertius, but in all the keenness of immediate impression. He also introduced into Roman literature that personal as distinct from political or social satire which appears later in the *Epodes* of Horace and the *Epigrams* of Martial. The sting in Catullus, at least in his iambics and phalæcians, is more concentrated than in the later writers. He anticipated Ovid in recalling the stories of Greek mythology into a second poetical life. His greatest contribution to poetic art consisted in the perfection which he attained in the phalæcian, the pure iambic, and the scazon metres, and in the ease and grace with which he used the language of familiar intercourse, as distinct from that of the creative imagination, of the "rostra," and of the schools, to give at once a lifelike and an artistic expression to his feelings. He has the interest of being the last poet of the free republic. In his life and in his art he was the precursor of those poets who used their genius as the interpreter and minister of pleasure; but he rises above them in the spirit of personal independence, in his affection for his friends, in his keen enjoyment of natural and simple pleasures, and in his power of giving vital expression to these feelings.

Third Period: Augustan Age, 42 B.C. to 17 A.D.

The poetic impulse and culture communicated to Roman literature in the last years of the republic passed on without any break of continuity into the literature of the succeeding age. One or two of the circle of Catullus survived into that age; but an entirely new spirit came over the literature of the new period, and it is by new men, educated indeed under the same literary influences, but living in an altered world and belonging originally to a different order in the state, that the new spirit was expressed. The literature of the later republic reflects the sympathies and prejudices of an aristocratic class, sharing in the conduct of national affairs and living on terms of equality with one another; that of the Augustan age, both in its early serious enthusiasm and in the licence and levity of its later development, represents the hopes and aspirations with which the new monarchy was ushered into the world, and the pursuit of pleasure and amusement, which becomes the chief interest of a class cut off from the higher energies of practical life, and moving in the refining and enervating atmosphere of an imperial court. The great inspiring influence of the new literature was the enthusiasm produced first by the hope and afterwards by the fulfilment of the restoration of peace, order, national glory, under the rule of Augustus. All that the age longed for seemed to be embodied in a man who had both in his

own person and by inheritance the natural spell which sways the imagination of the world. The sentiment of hero-worship was at all times strong in the Romans, and no one was ever the object of more sincere as well as simulated hero-worship than Augustus. It was not, however, by his equals in station that the first feeling was likely to be entertained. The earliest to give expression to it was the humbly-born poet from the Cisalpine province; but the spell was soon acknowledged by the calmer and more worldly-wise poet whose first enthusiasm had directed him into the opposite camp. The disgust aroused by the anti-national policy of Antony, and the danger to the empire which was averted by the result of the battle of Actium, with the confidence inspired by the new ruler, combined to reconcile the great families as well as the great body of the people to the new order of things.

While the establishment of the empire produced a revival of national and imperial feeling, it suppressed all independent political thought and action. Hence the two great forms of prose literature which drew their nourishment from the struggles of political life, oratory and contemporary history, were arrested in their development. The chief interest of letter-writing had consisted in its being the medium of interchange of thought on politics, and thus, although correspondence between friends still went on as before, no collection of letters was of sufficient importance to be preserved. The main course of literature was thus for a time diverted into poetry. That poetry in its most elevated form aimed at being the organ of the new empire and of realizing the national ideals of life and character under its auspices; and in carrying out this aim it sought to recall the great memories of the past. It became also the organ of the pleasures and interests of private life, the chief motives of which were the love of nature and the passion of love. It sought also to make the art and poetry of Greece live a new artistic life. Satire, debarred from that comment on political action which had been open to Lucilius and to Catullus and Calvus under the republic, turned to social and individual life, and combined with the newly-developed taste for ethical analysis and reflexion introduced by Cicero. One great work had still to be done in prose—a retrospect of the past history of the state from an idealizing and romanticizing point of view. For that work the Augustan age, as the end of one great cycle of events and the beginning of another, was eminently suited, and a writer who, by his gifts of imagination and sympathy, was perhaps better fitted than any other man of antiquity for the task, and who through the whole of this period lived a life of literary leisure, was found to do justice to the subject.

Although the age did not afford that free scope and stimulus to individual energy and enterprise which have been the conditions under which the most truly creative literature has flourished, no age afforded more material and social advantages for the peaceful cultivation of letters. The new influence of patronage, which in other times has chilled the genial current of literature, became, in the person of Mæcenas, the medium through which literature and the imperial policy were brought into union. Poetry thus acquired the tone of the world, kept in close connexion with the chief source of national life, while it was cultivated to the highest pitch of artistic perfection under the most favourable conditions of leisure and freedom from the distractions and anxieties of life.

Virgil.

The earliest in the order of time of the poets who adorn this age—Virgil (70-19)—is also the greatest in genius, the most richly cultivated, and the most perfect in art. He is the idealizing poet of the hopes and aspirations and of the purer and happier life of which the age seemed to contain the promise. He elevates the present by associat-

ing it with the past and future of the world, and sanctifies it by seeing in it the fulfilment of a divine purpose. Poetry is no longer, as in the previous generation, in discord with the dominant tendency of affairs, but in harmony with all that was restorative of the peace, order, and happiness of the world. Virgil is the true representative poet of Rome and Italy, of national glory and of the beauty of nature, the artist in whom all the efforts of the past were made perfect, and the unapproachable standard of excellence to future times. While more richly endowed with sensibility to all native influences, he was more deeply imbued than any of his contemporaries with the poetry, the thought, and the learning of Greece. It was by leaning on these supports that his genius felt its way and expanded into higher and wider development. His art begins in imitation of the cadences, the diction, and the pastoral fancies of Theocritus; but even in these imitative poems of his youth we see that he is perfect master of his materials. The Latin hexameter, which in Ennius and Lucretius was the organ of the more dignified and majestic emotions, became in his hands the most perfect measure in which the softer and more luxurious sentiment of nature has been expressed; and the Latin language was enriched with its sweetest and most musical variations. The sentiment of Italian scenery and the love which the Italian peasant has for the familiar sights and sounds of his home found a voice which never can pass away; and the joy and pain of the passion of love were revealed in these poems in a way as yet unapprehended by the world. In this the earliest and least serious effort of Virgil's genius there is no immaturity of art, and in poems outwardly most remote from the current of active life there is the recognition of the master-force by which that current was destined to be impelled and controlled.

In his next poem, the *Georgics*, we are struck by the great advance in the originality and self-dependence of the artist, in the mature perfection of his workmanship, in the deepening and strengthening of all his sympathies and convictions. His genius still works under forms prescribed by Greek art, and under the disadvantage of having a practical and utilitarian aim imposed on it. But he has even in form so far surpassed his originals that he alone has gained for the pure didactic poem a place among the highest forms of serious poetry, while he has so transmuted his material that, without violation of truth, he has made the whole poem alive with poetic feeling. The homeliest details of the farmer's work are transfigured through the magical potency of the poet's love of nature in her immediate charm of sight and sound and in her all-pervading presence, especially as that charm and presence reveal themselves in the land and climate of Italy; through his religious feeling and his pious sympathy with the sanctities of human affection; through his patriotic sympathy with the national greatness; and through the rich allusiveness of his art to everything in poetry and legend which can illustrate and glorify his theme.

In the *Pastoral Poems* and *Georgics* Virgil is the idealizing poet of the beauty and of the old simple and hardy life of Italy, as the imagination could conceive of it in an altered world. In the *Æneid* he is the idealizing poet of national glory, especially as that glory was manifested in the person of Augustus. The epic of national life, vividly conceived but rudely executed by Ennius, was perfected in the years that followed the decisive victory at Actium. To do justice to his idea Virgil enters into rivalry with a greater poet than those whom he had equalled or surpassed in his previous works. And, though he cannot unroll before us the page of heroic action with the power and majesty of Homer, yet by the sympathy with which he realizes the idea of Rome, and by the power with which

he has used the details of tradition, of local scenes, of religious usage, to embody it, he has built up in the form of an epic poem the most enduring and the most artistically constructed monument of national grandeur.

Horace. The second great poet of the time—Horace (65-8)—holds a lower place in the reverence of the world, but is perhaps as much loved and is even more largely and familiarly known. He is both the realist and the idealist of his age. If we want to know the actual lives, manners, and ways of thinking of the Romans of the generation succeeding the overthrow of the republic it is in the *Satires* and partially in the *Epistles* of Horace that we shall find them. If we ask what there was in the life of that time of more exquisite or more piquant charm, of more elevated enthusiasm, of graver experience, to stir the fancy and move the mood of imaginative reflexion, it is in the lyrical poems of Horace that we shall find the most varied and trustworthy answer. He was prepared for his double task by the experience of life and his strong hold on the actual world, and by drinking long and deeply of the purer and more remote sources of Greek inspiration.

His literary activity extends over about thirty years and naturally divides itself into three periods, each marked by a distinct character. The first—extending from about 40 to 29—is that of the composition of the *Epodes* and *Satires*. In the former he imitates the Greek poet Archilochus, but takes his subjects from the men, women, and incidents of the day. They are the expression of the least happy part of his career and the least estimable side of his nature. His humorous observation of life and the more serious grain in his character found more congenial occupation in perfecting the national work of Lucilius than in introducing “the Parian iambics to Latium.” Personality is the essence of his *Epodes*; in the *Satires* it is used merely as illustrative of general tendencies. In the *Satires* we find realistic pictures of social life, and the conduct and opinions of the world submitted to the standard of good feeling and common sense. The style of the *Epodes* is pointed and epigrammatic, that of the *Satires* natural and familiar. The hexameter no longer, as in Lucilius, moves awkwardly as if in fetters, but, like the language of Terence, of Catullus in his lighter pieces, of Cicero in his letters to Atticus, adapts itself to the everyday intercourse of life. The next period is the meridian of his genius, the time of his greatest lyrical inspiration, which he himself associates with the peace and leisure secured to him by his Sabine farm. The spirit of the child who had lost himself on Monte Voltore seemed to come back to him in his lonely wanderings among the Sabine hills. The life of pleasure which he had lived in his youth comes back to him, not as it was in its actual distractions and disappointments, but in the idealizing light of meditative retrospect. He had not only become reconciled to the new order of things, but was moved by his intimate friendship with Mæcenas to aid in raising the world to sympathy with the imperial rule through the medium of his lyrical inspiration, as Virgil had through the glory of his epic art. With the completion of the three books of *Odes* he cast aside for a time the office of the “vates,” and resumed that of the critical spectator of human life, but in the spirit of a moralist rather than a satirist. He feels the increasing languor of the time as well as the languor of advancing years, and seeks to encourage younger men to take up the rôle of lyrical poetry, while he devotes himself to the contemplation of the true art of living. Self-culture rather than the fulfilment of public or social duty, as in the moral teaching of Cicero, is the aim of his teaching; and in this we recognize the influence of the empire in throwing the individual back on himself. As Cicero tones down his oratory in his moral treatises, so Horace tones down the

fervour of his lyrical utterances in his *Epistles*, and thus produces a style combining the ease of the best epistolary style with the grace and concentration of poetry,—the style, as it has been called, of “idealized common sense,” that of the “urbanus” and cultivated man of the world who is also in his hours of inspiration a genuine poet. In the last decennium of his life he resumed for a time, under pressure of the imperial command, his lyrical function, and produced some of the most exquisite and mature products of his art. But his chief activity is devoted to criticism. He first vindicates the claims of his own age to literary pre-eminence, and then seeks to stimulate the younger writers of the day to what he regarded as the manlier forms of poetry, and especially to the tragic drama, which seemed for a short time to give promise of an artistic revival. It seems strange that, although he must have known the writings of Propertius and the earlier writings of Ovid, he has no word of recognition for them. And, though he writes to Tibullus with friendly regard, he seems to value him as a student of philosophy more than as a poet, and says nothing to indicate that he believed his work would be more enduring than that of Titius or Julius Florus or Iulus Antonius.

But the poetry of the latter half of the Augustan age destined to survive did not follow the lines either of lyrical or of dramatic art marked out for them by Horace. The latest form of poetry adopted from Greece and destined to gain and permanently to hold the ear of the world was the elegy. From the time of Mimnermus this form seems to have presented itself as the most natural vehicle for the poetry of pleasure in an age of luxury, refinement, and incipient decay. Its facile flow and rhythm seem to adapt it to the expression and illustration of personal feeling. It goes to the mind of the reader through a medium of sentiment rather than of continuous thought or imaginative illustration. The greatest masters of this kind of poetry are the elegiac poets of the Augustan age,—Tibullus, Propertius, and Ovid. Of these Tibullus (d. 19) is the most refined and tender. As the poet of love he gives utterance to the pensive melancholy rather than to the pleasures associated with it. In his sympathy with the life and beliefs of the country people he shows an affinity both to the idyllic spirit and to the piety of Virgil. There is something, too, in his fastidious refinement and in his shrinking from the rough contact of life that reminds us of the English poet Gray.

A poet of more strength and more powerful imagination, Propertius, but of less refinement in his life and less exquisite taste in his art, is Propertius (c. 50-c. 15), “the Roman Callimachus.” His youth was a more stormy one than that of Tibullus, and was passed, unlike his, among the “healthy woods” of his country estate, but amid all the licence of the capital. His passion for Cynthia, the theme of his most finished poetry, is second only in interest to that of Catullus for Lesbia; and Cynthia in her fascination and caprices seems a more real and intelligible personage than the idealized object first of the idolatry and afterwards of the malediction of Catullus. Propertius is a less accomplished artist and a less equably pleasing writer than either Tibullus or Ovid, but he shows more power of dealing gravely with a great or tragic situation than either of them, and his diction and rhythm give frequent proof of a concentrated force of conception and a corresponding movement of imaginative feeling which remind us of Lucretius.

The most facile and brilliant of the elegiac poets and the Ovid least serious in tone and spirit is Ovid (43 B.C.-17 A.D.), the latest in order of time. As an amatory poet he is the poet of pleasure and intrigue rather than of tender sentiment or absorbing passion. Though he treats his subject in relation to himself with more levity and irony than real

feeling, yet he alone among the elegiac poets is able to embody it in dramatic form, and by his vivid gifts of fancy to create a literature of romantic passion and adventure adapted to amuse and fascinate the idle and luxurious society of which the elder Julia was the centre. The power of continuous narrative is best seen in the *Metamorphoses*, written in hexameters, to which he has imparted a rapidity and fluidity of movement more suited to romantic and picturesque narrative than the weighty self-restrained verse of Virgil. In his *Fasti* he treats a subject of national interest; it is not, however, through the strength of Roman sentiment but through the power of vividly conceiving and narrating stories of strong human interest that the poem lives. In his latest works—the *Tristia* and *Ex Ponto*—he imparts the interest of personal confessions to the record of a unique experience. Latin poetry is more rich in the expression of personal feeling than of dramatic imagination. In Ovid we have both. We know him in the intense liveliness of his feeling and the human weakness of his nature more intimately than any other writer of antiquity, except perhaps Cicero. As Virgil marks the point of maturest excellence in poetic diction and rhythm, Ovid marks that of the greatest facility.

The Augustan age was one of those great eras in the world, like the era succeeding the Persian War in Greece, the Elizabethan age in England, and the beginning of the present century in Europe, in which what seems a new spring of national and individual life calls out an idealizing retrospect of the past. As the present seems full of new life, the past seems rich in glory and the future in hope. The past of Rome had always a peculiar fascination for Roman writers. Virgil in a supreme degree, and Horace, Propertius, and Ovid in a less degree, had expressed in their poetry the romance of the past. But it was in the great historical work of Livy (59 B.C.-17 A.D.) that the record of the national life, coloured by idealizing retrospect, received its most systematic exposition. The conception of his work must have nearly coincided in point of time with the impulses in which the *Aeneid* and the national *Odes* of Horace had their origin. Its execution was the work of a life prolonged through the languor and dissolution following so soon upon the promise of the new era, during which time the past became glorified by contrast with the disheartening aspect of the present. The value of the work consists not in any power of critical investigation or weighing of historical evidence but in the intense sympathy of the writer with the national ideal, and the vivid imagination with which under the influence of this sympathy he gives life to the events and personages, the wars and political struggles, of times remote from his own. Although he has no accurate conception of the constitutional history of the state, yet nowhere else in ancient history do we find the patrician and plebeian forces in a state by which that history is worked out so vividly and dramatically embodied. He makes us feel more than any one the majesty of the Roman state, of its great magistracies, and of the august council by which its policy was guided. And, while he makes the words "senatus populusque Romanus" full of significance for all times, no one realizes with more enthusiasm all that is implied in the words "imperium Romanum," and the great military qualities of head and heart by which that empire was acquired and maintained. While the general conception of his work is thus animated by national enthusiasm, the details are filled up with all the resources of a vivid imagination and of literary art. The vast scale on which the work was conceived and the thoroughness of artistic execution with which the details are finished are characteristically Roman. The prose style of Rome, as a vehicle for the continuous narration of events coloured by a rich and picturesque

imagination and vivified by dignified emotion, attained its perfection in him.

Fourth Period: from 17 to about 130 A.D.

For more than a century after the death of Augustus Roman literature continues to flow in the old channels. Rome continues the centre of the literary movement. The characteristics of the great writers are essentially national, not provincial nor cosmopolitan. In prose the old forms—oratory, history, the epistle, treatises or dialogues on ethical and literary questions—continue to be cultivated. Scientific and practical subjects, such as natural history, architecture, medicine, agriculture, are treated in more elaborate literary style. The old Roman *satura* is developed into something like the modern prose novel. In the various provinces of poetry, while there is little novelty or inspiration, there is abundance of industry and ambitious effort. The national love of works of large compass shows itself in the production of long epic poems, both of the historic and of the imitative Alexandrian type. Out of many others four of these have been preserved, two at least of which the world might have allowed to perish without sensible diminution to its literary wealth. The imitative and rhetorical tastes of Rome showed themselves in the composition of exotic tragedies, as remote in spirit and character from Greek as from Roman life, of which the only extant specimens are those attributed to the younger Seneca. The composition of didactic, lyrical, and elegiac poetry also was the accomplishment and pastime of an educated dilettante class. The only extant specimens of any interest are some of the *Silvæ* of Statius. The only voice with which the poet of this age can express himself with force and sincerity is that of satire and satiric epigram. Ovid was the last of the true poets of Rome who combined idealizing power of imagination with artistic originality. After him we find only imitative echoes of the old music created by Virgil and others, as in Statius, or powerful declamation, as in Lucan and Juvenal. There is a deterioration in the diction as well as in the music of poetry. The elaborate literary culture of the Augustan age has done something to impair the native force of the Latin idiom. The language of literature, in the most elaborate kind of prose as well as poetry, loses all ring of popular speech. The old oratorical tastes and aptitudes find their outlet in public recitations and the practice of declamation. Forced and distorted expression, exaggerated emphasis, point and antithesis, an affected prettiness, "melliti verborum globuli," were studied with the view of gaining the applause of audiences who thronged the lecture and recitation rooms in search of temporary excitement. Education was more widely diffused, but was less thorough, less leisurely in its method, less than before derived from the purer sources of culture. The precocious immaturity of Lucan's career affords a marked contrast to the long preparation of Virgil and Horace for their high office. Although there are some works of the Silver Age of considerable and one at least of supreme interest, from the insight they afford into the experience of a century of organized despotism and its effect on the spiritual life of the ancient world, it cannot be doubted that the steady literary decline which characterized the last centuries of paganism begins with the death of Ovid and Livy. If the world had not altogether ceased to produce men of genius, the conditions under which their genius could unfold itself were no longer the same. The influences which had inspired the republican and Augustan literature were the artistic impulse derived from a familiarity with the great works of Greek genius, becoming more intimate with every new generation, the spell of Rome over the imagination of the kindred Italian races, the charm of Italy, and the vivid

Livy.

Characteristics of post-Augustan age.

sensibility of the Italian temperament. These influences were certainly much less operative in the first century of the empire. The imitative impulse, which had much of the character of a creative impulse, and had resulted in the appropriation of the forms of poetry suited to the Roman and Italian character and of the metres suited to the genius of the Latin language, no longer stimulated to artistic effort. The great sources of Greek poetry were no longer regarded, as they were by Lucretius and Virgil, as "integri" and "sancti fontes," and approached in a spirit at once of daring adventure and reverential enthusiasm.¹ We have the testimony of two men of the shrewdest common sense and the most masculine understanding—Martial and Juvenal—to the stale and lifeless character of the art of the Silver Age, which sought to reproduce in the form of epics, tragedies, and elegies the bright fancies of the Greek mythology.

The idea of Rome, owing to the antagonism between the policy of the Government and the sympathies of the class by which literature was favoured and cultivated, could no longer be an inspiring motive, as it had been in the literature of the republic and of the Augustan age. The spirit of Rome appears only as animating the protest of Lucan, the satire of Persius and Juvenal, the sombre picture which Tacitus paints of the annals of the empire. Oratory is no longer an independent voice appealing to sentiments of Roman dignity, but the weapon of the "delatores," wielded for their own advancement and the destruction of that class which, even in their degeneracy, retained most sympathy with the national traditions. Roman history was no longer a record of national glory, stimulating the patriotism and flattering the pride of all Roman citizens, but a personal eulogy or a personal invective, according as servility to a present or hatred of a recent ruler was the motive which animated it.

The charm of Italian scenes still remained the same, but the fresh and inspiring feeling of nature as a great power in the world, a great restorative influence on human life, gave place to the mere sensuous gratification derived from the luxurious and artificial beauty of the country villa. The idealizing poetry of passion, which found a genuine voice in Catullus and the elegiac poets, could not prolong itself through the exhausting licence of successive generations. The vigorous vitality which gives interest to the personality of Catullus, Propertius, and Ovid no longer characterizes their successors. The pathos of natural affection is occasionally recognized in Statius and more rarely in Martial, but it has not the depth of tenderness found in Lucretius and Virgil. Human life is altogether shallower, has the same capacity for neither joy nor sorrow. The wealth and luxury of succeeding generations, the monotonous routine of life, the separation of the educated class from the higher work of the world, have produced their enervating and paralysing effect on the mainsprings of poetic and imaginative feeling.

New elements, however, appear in the literature of this period. As the result of the severance from the active interests of life, a new interest is awakened in the inner life of the individual. The extreme immorality of the age not only affords abundant material to the satirist but deepens the consciousness of moral evil in purer and more thoughtful minds. To these causes we attribute the pathological observation of Seneca and Tacitus, the new sense of purity in Persius called out by contrast with the impurity around him, the glowing if somewhat sensational exaggeration of Juvenal, the vivid characterization of Martial. The literature of no time presents so powerfully

the contrast between moral good and evil. In this respect it is truly representative of the life of the age. Another new element is the influence of a new race. In the two preceding periods the rapid diffusion of literary culture following the Social War and the first Civil War was seen to awaken into new life the elements of original genius in Italy and Cisalpine Gaul. In the first century of the empire a similar result was produced by the diffusion of that culture in the Latinized districts of Spain. The fervid temperament of a fresh and vigorous race, which received the Latin discipline just as Latium had two or three centuries previously received the Greek discipline, revealed itself in the writings of the Senecas, Lucan, Quintilian, Martial, and others, who in their own time added literary distinction to the Spanish towns from which they came. This new cosmopolitan element introduced into Roman literature draws into greater prominence the characteristics of the last great representatives of the genuine Roman and Italian spirit,—Tacitus and Juvenal.

On the whole this century shows, in form, language, and substance, the beginning of literary decay. But it is still capable of producing men of original force; it still maintains the traditions of a happier time; it is still alive to the value of literary culture, and endeavours by minute attention to style to produce new effects. Though it was not one of the great eras in the annals of literature, yet the century which produced Martial, Juvenal, and Tacitus cannot be pronounced barren in literary originality, nor that which produced Seneca and Quintilian in culture and literary taste.

This fourth period is itself subdivided into three divisions:—(1) that extending from the accession of Tiberius to the death of Nero, 68,—the only important part of it being the Neronian age, 54 to 68; (2) the Flavian era, from the death of Nero to the death of Domitian, 96; (3) the period included in the reigns of Nerva and Trajan and part of the reign of Hadrian.

(1) For a generation after the death of Augustus no new original literary force appeared. The later poetry of the Augustan age had ended in trifling dilettanteism, for the continuance of which the atmosphere of the court was no longer favourable. The class by which literature was encouraged had become both enervated and terrorized. The *Fables* of Phædrus, the Pierian freedman, a work of no kind of national significance and representative in its morality only of the spirit of cosmopolitan individualism, is the chief poetical product of the time. Velleius Paterculus and Valerius Maximus are the most important prose-writers. The traditional culture was still, however, maintained, and the age was rich in grammarians and rhetoricians. The new profession of the "delator" must have given a stimulus to oratory. A high ideal of culture, literary as well as practical, was realized in Germanicus, which seems to have been transmitted to his daughter Agrippina, whose patronage of Seneca had important results in the next generation. The reign of Claudius was a time in which antiquarian learning, grammatical studies, and jurisprudence were cultivated, but no important additions were made to literature. A fresh impulse was given to letters on the accession of Nero, and this was partly due to the theatrical and artistic tastes of the young emperor. Four writers of the Neronian age still possess considerable interest,—Seneca, Lucan, Persius, and Petronius. The first three represent the spirit of their age by exhibiting the power of the Stoic philosophy as a moral, political, and religious force; the last is the most cynical exponent of the depravity of the time. Seneca (d. 65) is less than Persius a pure Stoic, and more of a moralist and pathological observer of man's inner life. He makes the commonplaces of a cosmopolitan philosophy

New
literary
elements.

¹ Contrast with the "juvat integros accedere fontes" and the "sanctos ausus recludere fontes" of the older poets the first line of Persius's prologue "nec fonte labra prolixi caballino."

interesting by his abundant illustration drawn from the private and social life of his contemporaries. He has knowledge of the world, the suppleness of a courtier, Spanish vivacity, and the "ingenium amœnum" attributed to him by Tacitus, the fruit of which is sometimes seen in the "honeyed phrases" mentioned by Petronius,—pure aspirations combined with inconsistency of purpose,—the inconsistency of one who tries to make the best of two worlds, the ideal inner life and the successful real life in the atmosphere of a most corrupt court. The *Pharsalia* of Lucan (39-65), with Cato as its hero, is essentially a Stoical manifesto of the opposition. It is written with the force and fervour of extreme youth and with the literary ambition of a race as yet new to the discipline of intellectual culture, and is endowed with a rhetorical rather than a poetical imagination. The *Satires* of Persius (34-62) are the purest product of Stoicism,—a Stoicism that had found in a living contemporary, Thræsea, a more rational and practical hero than Cato. But no important writer of antiquity has less literary charm than Persius. He either would not or could not say anything simply and naturally. In avoiding the literary conceits and fopperies which he satirizes he has recourse to the most unnatural contortions of expression. Of the works of the time that which from a human point of view is perhaps the most detestable in ancient literature has the most genuine literary quality, the fragment of the prose novel of Petronius. It is most sincere in its representation, least artificial in diction, most penetrating in its satire, most just in its criticism of art and style.

(2) A greater sobriety of tone was introduced both into life and literature with the accession of Vespasian. The time was, however, characterized rather by good sense and industry than by original genius. Under Vespasian Pliny the elder is the most important prose-writer, and Valerius Flaccus, author of the *Argonautica*, the most important among the writers of poetry. The reign of Domitian, although it silenced the more independent spirits of the time, Tacitus and Juvenal, witnessed more important contributions to Roman literature than any age since the Augustan,—among them the *Institutes* of Quintilian, the *Punic War* of Silius Italicus, the epics and the *Silvæ* of Statius, and the *Epigrams* of Martial. Quintilian (c. 35-95) is brought forward by Juvenal as a unique instance of a thoroughly successful man of letters, of one not belonging by birth to the rich or official class who had risen to wealth and honours through literature. He was well adapted to his time by his good sense and sobriety of judgment. His criticism is just and true rather than subtle or ingenious, and thus stands the test of the judgment of after-times. The poem of Silius (25-101) is a proof of the industry and literary ambition of members of the rich official class. Of the epic poets of the Silver Age Statius (c. 45-96) shows the greatest technical skill and the richest pictorial fancy in the execution of detail; but his epics have no true inspiring motive, and, although the recitation of the *Thebaid* could attract and charm an audience in the days of Juvenal, it really belongs to the class of poems so unsparingly condemned both by him and Martial. In the *Silvæ*, though many of them have little root in the deeper feelings of human nature, we find occasionally more than in any poetry after the Augustan age something of the purer charm and pathos of life. But it is not in the artificial poetry of the *Silvæ*, nor in the epics and tragedies of the time, nor in the cultivated criticism of Quintilian that the age of Domitian lives for us. It is in the *Epigrams* of Martial (c. 41-102) that we have a true image of the average sensual frivolous life of Rome at the end of the 1st century, seen through a medium of wit and humour, but undistorted by the exaggeration which moral indignation and the love of effect add to the representation

of Juvenal. Martial represents his age in his *Epigrams*, as Horace does his in his *Satires* and *Odes*, with more variety and incisive force in his sketches, though with much less poetic charm and serious meaning. We know the daily life, the familiar personages, the outward aspect of Rome in the age of Domitian better than at any other period of Roman history, and that knowledge we owe to Martial. Though a less estimable character than some of them, he is a better writer than any of his contemporaries because he did not withdraw into a world of literary interests, but lived and wrote in the central whirl of city life. He tells us the truth of his time without the wish either to protest against or to extenuate its vices.

(3) But it was under Nerva and Trajan that the greatest and most truly representative works of the empire were written, those which at once present the most impressive spectacle to the imagination and have made its meaning sink most deeply into the heart and conscience of the world. The *Annals* and *Histories* of Tacitus (54-119), with the supplementary *Life of Agricola* and the treatise *On the Manners of the Germans*, and the *Satires* of Juvenal (c. 47-130) have summed up for all after-times the moral experience of the Roman world from the accession of Tiberius to the death of Domitian. The powerful feelings under which they both wrote, the generous scorn and generous pathos of the historian acting on extraordinary gifts of imaginative insight and imaginative characterization, and the fierce indignation of the satirist finding its vent in exaggerating realism, have undoubtedly disturbed the completeness and exactness of the impressions which they received and have perpetuated; nevertheless their works are the last powerful voices of Rome, the last voices expressive of the freedom and manly virtue of the ancient world. In them alone among the writers of the empire the spirit of the Roman republic seems to revive. The *Letters* of Pliny (61-c. 115), though they do not contradict the representation of Tacitus and Juvenal regarded as an exposure of the political degradation and moral corruption of prominent individuals and classes, do much to modify the pervadingly tragic and sombre character of their representation, and to show that life even in the higher circles of Roman society had still sources of pure enjoyment and wellbeing.

With the death of Juvenal, the most important part of whose activity falls in the reign of Trajan, Roman literature as an original and national expression of the experience, character, and sentiment of the Roman state and empire, and as one of the great literatures of the world, may be considered as closed. There still continued to be much industry and activity in gathering up the memorials of the past and in explaining and illustrating the works of genius of the ages of literary creation. A kind of archaic revival took place in the reign of Hadrian, which showed itself both in affectation of style and in a renewed interest in the older literature. The most important works of the age succeeding that of Juvenal are the *Biographies* of Suetonius (c. 75-160), which did much to preserve a knowledge of both political and literary history. The *Noctes Atticæ* of Aulus Gellius, written in the latter part of the 2d century, have preserved many anecdotes, some of them of doubtful authenticity, concerning the older writers. The persistence of critical and grammatical studies and of interest in the literature of the past resulted in the 4th and 5th centuries in the works of Donatus and Servius and in the *Saturnalia* of Macrobius. The works of the great Latin grammarians are also to be connected with the scholarly study of antiquity which superseded to a great extent the attempt to produce works of new creation. The writer of most original genius among the successors of Juvenal and Tacitus is probably Apuleius, and his most

original work, the *Metamorphoses*, has nothing of Roman or Italian colouring. The last writer who combines genius with something of national spirit is the poet Claudian, who wrote his epics under the immediate inspiring influence of a great national crisis and a national hero. As fresh blood came to the nearly exhausted literary genius of Italy from Spain in the first century of the empire, so in the later centuries it came from Africa. Whatever of original literary force appears either in the pagan or Christian literature written in the Latin language between the 2d and the 6th century is due to Romanized settlements in Africa. We have to remember during all these comparatively barren centuries that secular literature had

again found its organ in the Greek language, and that the new spiritual life of the world had come into stern antagonism with many of the most powerful motives of classical poetry.

Literature.—The most important books on the subject are the *Geschichte der römischen Litteratur*, by J. C. F. Bähr; the *Grundriss der römischen Litteratur*, by G. Bernhardt; and the *Geschichte der römischen Litteratur*, by W. S. Teuffel. The last of these has been translated into English. There is also a *Geschichte der römischen Litteratur* by G. Munck. The most recent books on the subject in English are Mr. G. A. Simcox's *History of Latin Literature from Ennius to Boethius*, and the *History of Roman Literature from the Earliest Period to the Death of Marcus Aurelius*, by Mr C. T. Cruttwell. (W. Y. S.)

ROMANS, a town of France, in the department of Drôme, 12 miles north-east of Valence by the railway connecting this town with Grenoble, stands at the foot of an eminence on the right bank of the Isère, 530 feet above the sea. A fine stone bridge unites it with Bourg du Péage on the other side of the river. Both towns owe their prosperity to their situation in the most fertile part of the valley of the Isère, where land is sometimes sold at £200 per acre. The population of Romans was 11,916 (13,806 in the commune) in 1881. The present parish church belonged to an abbey founded in 837 by St Bernard, forty-ninth bishop of Vienne. The north portal, now condemned, dates from the 11th century; the principal portal is one of the finest specimens of 12th-century Romanesque; and the choir and the transept are striking examples of the style of the 13th. Romans has also a wealthy hospital and a large seminary. Besides the silk-trade the local industries comprise shoemaking, tanning, hat-making, oil-refining, &c.

ROMANS, EPISTLE TO THE. The origin of the Christian community at Rome is involved in obscurity. According to Catholic tradition it was founded by Peter, who was its bishop for a quarter of a century. But neither allegation has historical support. The most striking proof of the contrary is precisely this epistle of Paul. It does not contain the remotest reference to either the one fact or the other. And if Paul had written such an epistle to a community founded by Peter he would not only have violated the agreement mentioned in Gal. ii. 9, but would also have gone against his own principle of refraining from intrusion on the mission fields of others (Rom. xv. 20; 2 Cor. x. 16). But neither was Paul the founder of the church in Rome. This also is shown by the present epistle, in which he for the first time opens relations with a community already formed. Thus we are thrown upon mere conjecture. In pursuing the investigation we have this fact to start from, that even before the Christian era there already existed in Rome a strong Jewish colony. After the conquest of Jerusalem by Pompey (63 B.C.) numbers of Jewish prisoners of war were brought to Rome and there sold as slaves. Of these many were soon afterwards emancipated by their masters, Jewish slaves being a peculiarly inconvenient kind of property on account of the strictness of their observance of their law, especially in the matter of clean and unclean meats (Philo, *Leg. ad Caium*, ii. 568, ed. Mangey). These freedmen became the nucleus of a Jewish community, which ultimately settled in Trastevere and organized itself into an independent religious communion. It rapidly increased and became an important element in the life of the capital. By the time of Herod's death (4 B.C.) the independent Jews of Rome—that is, besides women and children—already numbered 8000 according to Josephus (*Antiq.*, xvii. 11, 1; *Bell. Jud.*, ii. 6; 1). In the reign of Tiberius indeed this large and powerful organization was dissolved at a single

stroke, a decree of the senate (19 A.D.) having sent to Sardinia for military service all Jews capable of bearing arms (Tac., *Ann.*, ii. 85; Suet., *Tiber.*, 36; Joseph., *Antiq.*, xviii. 3, 5). It is probable, however, that after the death (31 A.D.) of Sejanus, to whom this measure had been mainly due, the Jews were expressly permitted to return to Rome, for we are told by Philo (*Leg. ad Caium*, ii. 569, ed. Mangey) that after the death of his favourite Tiberius perceived the Jews to have been unjustly calumniated, and ordered the authorities to refrain from oppressing them. At all events the community must ultimately have come together again, for in the reign of Claudius its existence is again presupposed, the idea of expelling the Jews from the capital having anew been entertained under that emperor. Regarding this proposal, however, accounts vary. According to the Acts of the Apostles (xviii. 2), and also Suetonius (*Claud.*, 25), it was actually carried out; but according to Dio Cassius (lx. 6) the expulsion was only proposed, and, when it was seen to be impracticable without great tumult, all that was done was to withdraw from the Jews their right of meeting. The latter version is doubtless the more correct. The withdrawal of the right of meeting was equivalent to the prohibition of public worship, and sufficiently explains why numbers left the city (Acts xviii. 2). But the main body must have remained and doubtless have again obtained the privilege of assembly, for from the time of Nero onwards we find the Jews in Rome once more flourishing with undiminished vigour.

From the midst of this Jewish community it was that the Christian congregation doubtless arose. The Jews of the Dispersion, it is well known, kept up an active correspondence with the mother-country in Palestine. Every year they sent their gifts and offerings thither, and every one in a position to do so went in person to the great festivals of the Holy City. As a result of this vigorously maintained intercourse, which was aided also by the interests of trade, tidings of Jesus as the promised Messiah did not fail to reach the capital of the empire. Individual Jews who had become believers came forward in Rome as preachers of the gospel and found acceptance with a section of their countrymen. They found a perhaps still more numerous following among the "God-fearing" or "devout" (*σεβόμενοι, φοβούμενοι, τὸν θεόν*) heathen, i.e., within that large circle which consisted of those who had adopted the faith of the Jews, observed certain of the more important precepts of their law, and also attended their public worship, but did not, strictly speaking, belong to the communion, and thus represented a sort of Judaism of the second order.¹ In proportion as faith in Jesus as the Messiah gained ground within the Jewish community, a separation between the believers and the others would of course become more

¹ Many scholars identify these "devout" heathen with the "proselytes of the gate" who are met with in Rabbinical literature; but in reality the two are quite distinct and unrelated.

and more inevitable. Under what circumstances and conditions the separation actually took place is not now known. We may be sure, however, that it was not brought about without violent internal commotions; it is probable even that the edict of Claudius itself may have had its occasion in these. The remark of Suetonius (*Claud.*, 25) readily admits of being interpreted in such a sense: "Judæos impulsore Chresto¹ assidue tumultuantes Roma expulit." So interpreted, these words contain our first notice of the Christian Church in Rome; its earliest constitution must have taken place precisely then. For, as has already been seen, the edict of banishment was probably never carried out, or at all events did not continue long in force. Unfortunately, we do not know the date of it, but it must have belonged to the later years of Claudius, for in the beginning of his reign the disposition of that emperor towards the Jews was friendly (*Jos.*, *Antiq.*, xix. 5). In its context also Acts xviii. 2 implies a late rather than an early date, say about 50-52 A.D.; and there is nothing against this in the circumstance that the edict is mentioned by Dio Cassius towards the beginning of his account of that reign, for in that particular passage the author is characterizing his subject in a general way and not referring to events in their chronological sequence.

If the foregoing suppositions are correct, Paul's epistle to the church at Rome was written some six or eight years after its formation. Paul was staying in Corinth at the time, in the last month before the eventful journey to Jerusalem which led to his captivity (58 A.D.). The evidence that the epistle was written during this last sojourn in Greece, which is only briefly alluded to in Acts xx. 2, 3, is simple and conclusive. We know from the Epistles to the Corinthians that shortly before this stay the apostle had set on foot throughout the churches of Macedonia and Achaia a collection on behalf of the needy church at Jerusalem (1 Cor. xvi. ; 2 Cor. viii.-ix.). This collection it was his wish to carry in person from Corinth (1 Cor. xvi. 3-6; 2 Cor. i. 16; Acts xxiv. 17). But the Epistle to the Romans was written, as we learn from the author himself (Rom. xv. 24-28), when the collection had just been concluded and he was on the point of taking it with him to Jerusalem,—in other words, before his departure from Corinth, but not long before.

We have now to inquire into the motive which led the apostle precisely at such a juncture to address a communication so full and elaborate as this to the Christian community at Rome, with which he had no personal acquaintance. In general terms we have it from himself at the beginning and end of the epistle (i. 8-15, xv. 14 sq.). He had proclaimed the gospel in all the East from Jerusalem to Illyricum (xv. 19). He regarded his work in these quarters as for the present finished, and he felt impelled to preach Christ crucified also in the West. He was already looking towards Spain (Rom. xv. 24, 28). He wished first to take the collection to Jerusalem, and, that once accomplished, his labours in the West were to begin forthwith. But there, in Rome, the metropolis of the world, a community already existed which had come into being apart from any effort of his. For his activity in the West it was obviously of the utmost importance to secure the organization for himself and his message. Should its attitude be cold, he would be left without any secure base of operations. The purpose of the present epistle, then, is, to speak generally, this: to secure a connexion with the community at Rome, to gain it for himself and the gospel he carried. But had it hitherto been without that gospel? The community was at any rate already a Christian one.

And, if perhaps it was in need of fuller teaching, why did he not wait until he arrived in person in Rome in order to give it? Surely he could have done this more effectually by word of mouth than by a written treatise. Why, then, did he send this written message before him? There must have been some perfectly definite circumstances which led him to take this course. The nature of these will become clear to us when we seek to ascertain what at that juncture was the state of the Christian community in Rome.

Assuming that church to have arisen out of the midst of the Jewish community of the place, the most obvious conjecture is that at the period of the present letter it still continued to consist mainly of Jewish Christians, *i.e.*, that the majority of its members were Jews by birth who even after their conversion to Christ still continued to regard the Mosaic law in its totality as binding on them. This is the view which Baur in particular sought to establish,² as against the previously prevailing belief in the Gentile Christian character of the church in question. Baur's position was adopted by many subsequent critics, the most careful and elaborate defence of it, though with many modifications in detail, being that of Mangold.³ An intermediate position between the older view and that of Baur has been sought by Beyschlag,⁴ who works out the theory that the Christian community in Rome may possibly have been Jewish Christian in its way of thinking, yet at the same time Gentile Christian in its origin. In direct opposition to Baur, on the other hand, Theodor Schott⁵ has again maintained the older view as to its Gentile character, and in all essential points this is also defended by Weizsäcker,⁶ who, however, recognizes in Baur's hypothesis certain elements of truth by which the older theory must be corrected and supplemented.

In presence of the facts we are compelled to adopt the view of Weizsäcker as on the whole the right one. For the Jewish Christian character of the church Baur and Mangold, besides the argument from its presumable origin, have adduced a number of isolated texts. On the majority of these Mangold no longer lays any stress, since they admit of being otherwise interpreted. Thus when Paul designates Abraham as "our father" (τὸν προπάτορα ἡμῶν; iv. 1) he indeed includes his readers under the ἡμῶν. But in 1 Corinthians, an epistle certainly addressed to a church of Gentile Christians, the fathers of Israel are also called "our fathers" (1 Cor. x. 1). The Christian Church is in point of fact the true Israel; hence the patriarchs of Israel are its "fathers."⁷ In another place (Rom. vii. 1) Paul addresses his readers as persons "who know the law." But this holds true not of born Jews alone but of Gentile Christians as well, to whom also the Old Testament was a sacred book. Mangold finds an "irrefragable evidence of the Jewish Christian character of the community in Rome" in Rom. vii. 4: "ye also, beloved brethren, have died to the law" (καὶ ὑμεῖς ἐθανατώθητε τῷ νόμῳ). If they have died to it they must of course have once lived under it: so argues Mangold quite correctly. But the inference that

² First of all in his essay "Ueber Zweck u. Veranlassung des Römerbriefs," in the *Tübinger Zeitschr. f. Theol.*, 1836, hft. 3, p. 59 sq.

⁶ "Ueber die älteste römische Christengemeinde," in *Jahrb. f. deutsche Theol.*, 1876, p. 248 sq.

⁷ The words κατὰ σάρκα in Rom. iv. 1 are not to be construed with προπάτορα ἡμῶν but with the verb εἰρηκέναι. Abraham is thus designated as "our father" only in the spiritual and not in the physical sense.

¹ The vulgar pronunciation "Chrestus" for "Christus" is borne witness to in other passages (*Tert.*, *Apol.*, 3, and *Ad Nat.*, i. 3; *Lactan.*, *Inst. Div.*, iv. 7, 5).

in such a case they must have been born Jews is nevertheless a rash one. Not the Jews only, who possess the written law, but the whole of pre-Christian mankind are in Paul's conception ideally under the law,—under its bondage and curse. For all alike redemption is a redemption from the law's penalty and dominion. Hence Paul can say even to born Gentiles, *ἐθανατώθητε τῷ νόμῳ*. But according to Baur and Mangold the decisive evidence for the Jewish Christian character of the Roman Christians is the whole substance of the present epistle. All its arguments have for their aim to establish and vindicate the free gospel of Paul as against the objections of the Judaizers. They therefore conclude that it can have been designed only for Judaistically-disposed readers whom Paul seeks by these representations to win for his gospel. This line of argument is at bottom sound, and Baur has rendered a real service by showing that the epistle is by no means an outline of the Pauline dogmatic as a whole, but is simply an elucidation of such points in it as were offensive to the Judaically-minded. A brief review of its contents will make this clear.

The epistle falls into two unequal parts,—a theoretical (i.-xi.) and a hortatory (xii.-xvi.). The latter is almost of the nature of a mere appendix. The proper kernel of the epistle, that for the sake of which it came to be written, is found in the theoretical exposition of the first eleven chapters. These again fall into two sections,—chaps. i.-v. laying the positive foundations of the Pauline gospel as freed from the law, and chaps. vi.-xi. containing the vindication of that gospel against objectors. Having shown directly in chaps. i.-v. that we can attain righteousness and so salvation not along the path of legal observance but only along the path of faith, that is to say, believing apprehension of the mercy of God in Christ, he goes on in chap. vi. to refute point by point the positions of the Judaizers. He shows that in the freedom from the law the freedom to sin is by no means involved; on the contrary, it is with the believer an inherent necessity that he should live a new life in his fellowship with Christ (chap. vi.), and precisely by that fellowship is he for the first time truly enabled so to live (chap. viii.). The law cannot give him this power; it only commands, and does not at the same time give strength to obey. Hence, although good in itself, it has for men only a pernicious effect, inasmuch as by its injunctions sinful desire is excited (chap. vii.). A special objection of the Judaizers against the activity of Paul was also this,—that he should have turned to the heathen while still the greater part of Israel remained unconverted. His answer to this is contained in chaps. ix.-xi. On the one hand, it is Israel's own fault to have rejected its salvation; on the other hand, such has been God's will. Israel is at present rejected in order that the heathen may step into the gap thus made. Yet the rejection of Israel is only for a time. By the admission of the heathen Israel is to be stirred to jealousy and thus at last to be also converted. Precisely in such intricate paths as these is the wonderful depth of the divine wisdom made manifest.

Thus all the theoretical disquisitions of the epistle are in reality neither more nor less than a vindication and a polemic against the Jewish Christian point of view. But are we to conclude from this that the readers were themselves Jewish Christians? Such an inference has against it the fact that Paul, both at the beginning and at the close of his epistle, clearly designates them as Gentile Christians. In i. 5, 6, and i. 13-15, as well as in xv. 15, 16, he appeals to his office as apostle of the Gentiles as justifying him in now writing to the church at Rome and in proposing further labours there. In xi. 13, also, the readers are spoken to as of Gentile birth. The arguments by which Baur and Mangold seek to weaken

the force of this passage are very far-fetched. If, then, the Roman Christians were Gentiles by blood, the theory of Beyschlag, that they were Gentile Christians in origin but Jewish Christians by conviction, appears to have most to commend it in view of the contents of the epistle. If the epistle stopped short at the end of chap. xiii., we should indeed be compelled to adopt that theory. But the remaining chapters (xiv., xv.) suggest much rather that the majority were by conviction also Gentile Christians and emancipated from the law. For in the chapters specified Paul deals with a division that has arisen within the community. One section still remained in the bonds of the strictest legal scrupulosity: they regarded a vegetable diet (*λάχανα*) as alone permissible, rejecting the use of animal food (xiv. 2), and they also observed certain days (xiv. 5), by which, there can be no doubt, the Jewish sabbaths and festivals must be understood. In fact they were legal Jewish Christians, but Jewish Christians who in their asceticism went beyond the precepts of Mosaism, which indeed prohibits the use of the flesh of unclean animals, but not animal food in general. Over against these Jewish Christian ascetics, called by Paul "the weak in the faith," stood another section, whom he describes as "the strong." They rejected these legal observances, taking their stand on the gospel as freed from the law. But the latter must have been in the majority, for they are exhorted by the apostle to have a tender regard for the weakness of their brethren, and not by any harsh terrorism to force them into any courses which might offend their consciences. Such an exhortation, as Weizsäcker remarks, would have no meaning if the representatives of the freer view were not in the majority. The majority, then, of the church at Rome was Gentile Christian not only by origin but by conviction.

Here two problems arise, neither of which received sufficient attention from critics before Baur: (1) How are we to explain the origin, outside the limits of Paul's activity, of a Christian community thus free from the fetters of the law? and (2) How came it about that Paul should have addressed to such a community a letter like this,—adapted, as it appears to be, for Jewishly-inclined readers? As regards the first question, in the absence of adequate materials for a conclusive solution, our answer can only be conjectural. The problem is a difficult one, because, following Gal. ii., we must start with the assumption that the communities founded under the more direct influence of the original apostles did not reject the Jewish law. In seeking, then, to account for the existence of a community which had so done, we must carry with us the fact that within the wide limits of the Jewish Dispersion very various degrees of strictness in observance of the law were to be found. Even those who were in the truest sense members of the communities of the Dispersion can hardly have observed the law as strictly as did the Pharisees in Palestine. But the demands made on those "God-fearing" Gentiles who were wont to attach themselves, more or less closely, to the Jewish communities must of course have been still more accommodating. If only they accepted the monotheistic religion and its worship without the use of images, the ceremonial precepts laid upon them were reduced to a bare minimum,—the observance of Sabbaths, and also of some laws regarding meat. Now the community at Rome seems to have chiefly arisen out of the circles of such "God-fearing" Gentiles. As Paul himself gained access for the preaching of the gospel, at Thessalonica, for example, principally among the "God-fearing Greeks" (Acts xvii. 4), so also in Rome do these seem to have been the main element in the church. On this assumption we can understand how

from the outset the community had not been in the habit of observing the Mosaic law. At most it was observed in isolated details, and as new members continued to be added from the outer heathen world these relics of Jewish custom received less and less prominence, fading away in presence of the faith in Jesus as the Redeemer. It is possible that influences from Pauline circles may also have come into play, but of this we cannot be sure.

If such were the circumstances in which the majority of the community in Rome had been brought to their attitude of freedom towards the law, that attitude was one of fact rather than of principle. The law was not observed; but there was no clear consciousness that it had no obligatory force. A community thus placed had no firm basis from which to withstand a Judaizing agitation when it should arise. In such an event there was the greatest danger to its very existence. It is here, then, that we must look for the real occasion of the present epistle. Paul was afraid that the Judaizers who had wrought with such effect within the churches founded by himself in Galatia and Corinth might also lay hold on that at Rome. Perhaps they had already arrived there and the apostle knew it. At all events he perceived a threatening danger. He was unwilling to delay till he could visit the church personally, and accordingly sent forthwith an elaborate document in establishment and vindication of the gospel as free from the law, so that the Roman Christians might be confirmed in their free practice and might be strengthened to withstand the agitations of Judaizers. This is the explanation of the fact that a letter addressed to a Gentile Christian church, not in bondage to the law, is yet almost entirely devoted to the refutation of the Judaistic positions.

The genuineness of the epistle is practically undisputed; not so, however, its integrity. Baur (as had already been done by Marcion in ancient times) disputed the genuineness of the last two chapters (xv., xvi.), chiefly on the ground that in them a spirit of concession towards the weak is urged in a wholly un-Pauline manner. Lucht¹ has sought to separate out the genuine from the spurious in these chapters in a very complicated manner, but substantially on the lines of Baur's criticism. The most thorough discussion of Baur's and Lucht's views is that of Mangold,² who has very convincingly shown that there is no real ground for refusing to attribute to the apostle the chapters in question. All the exhortations to concession do not, after all, go beyond the principle acted on by Paul himself (1 Cor. ix. 20),—"to the Jews I became as a Jew that I might win the Jews." In two points, however, the defence does not hold: (1) the doxology at the close (Rom. xvi. 25-27) appears certainly to be from a later hand;³ (2) ch. xvi. 3-20 seems to be genuinely Pauline indeed, but not to belong to the present epistle. Not only is the large number of salutations in a letter addressed to a community personally unknown to the apostle in itself strange; but salutations also occur addressed to persons whom one would expect to find rather at Ephesus than at Rome (ver. 3, Aquila and Priscilla; ver. 5, Epænetus) and in districts where the apostle had resided and laboured (xvi. 7, 9, 13). Not without reason, therefore, is it conjectured that here we have a fragment of an epistle to the Ephesians which by mistake has come to be incorporated with that to the Romans.⁴

¹ *Ueber die beiden letzten Kapitel des Römerbriefes*, Berlin, 1871.

² *Der Römerbrief u. s. gesch. Voraussetz.*, pp. 1-164.

³ See Mangold, *op. cit.*, pp. 44-81.

⁴ See especially Mangold, *op. cit.*, pp. 147-164. Lightfoot (*St Paul's Epistle to the Philippians*, 2d ed., pp. 169-176) has shown that many of the names met with in Rom. xvi. 3-20 are found precisely in Roman inscriptions of the period of the emperors, but the fact is more striking than convincing. The names in themselves are common. It is not to the names but to the persons characterized that we have

The more recent literature relating to the Epistle to the Romans has been fully catalogued and discussed in the work of Grafe (*Ueber Veranlassung u. Zweck des Römerbriefes*, Tübingen, 1881). The most important works in the list have already been named in the present article. (E. S*.)

ROMANUS I. (Lecapenus), who shared the imperial throne with CONSTANTINE VII. (g.v.) and exercised all the real power from 919 to 944, was admiral of the Byzantine fleet on the Danube when, hearing of the defeat of the army at Achelous (17th August 917), he resolved to sail for Constantinople. Popular caprice as well as his influence over his sailors aided his ambition, and, after the marriage of his daughter Helena to Constantine, he was first proclaimed "basileopater" in April 919 and afterwards crowned colleague of his son-in-law on 17th December of the same year. His reign, which was undistinguished and uneventful, was terminated by his own sons Stephen and Constantine, who in 944 carried him off to the island of Prote and compelled him to become a monk. He died in 948.

ROMANUS II., emperor of the East, succeeded his father Constantine VII. in 959 at the age of twenty-one, and died—poisoned, it was believed, by his wife, Theophano—in 963. He was a pleasure-loving sovereign, but showed judgment in the selection of his ministers. The great event of his reign was the conquest of Crete by Nicephorus Phocas.

ROMANUS III. (Argyrus), emperor of the East, was an accomplished but otherwise undistinguished member of the Byzantine aristocracy when, summoned to the palace of the dying Constantine IX., he was informed that he had been selected to marry one of the imperial princesses and succeed the emperor. His hesitation as already a married man was removed by his wife, who generously took the veil; and his union with Zoe and their joint coronation were celebrated on 19th November 1028. Two days later Constantine died. A serious defeat which Romanus sustained in person at Azaz in Syria, when marching to take possession of Aleppo, considerably impaired the popularity among his subjects which he had sought to purchase by lavish concession to various classes, and soon afterwards he began to show symptoms of disease, attributed by many to slow poison administered by connivance of the empress. His death took place on 11th April 1034, and he was forthwith succeeded by MICHAEL IV. (g.v.).

ROMANUS IV. (Diogenes), emperor of the East from 1068 to 1071, was a member of a distinguished Cappadocian family and had risen to distinction in the army when he was convicted of treason against the sons of Constantine X. While waiting execution he was summoned into the presence of their mother, Eudocia Macrembolitissa, the empress regent, whom he so fascinated that she granted him a free pardon and shortly afterwards married him. Taking the field soon after his coronation, he carried on three campaigns against the Saracens and Seljuk Turks without achieving any decisive success, and in a fourth he was disastrously defeated by Alp Arslan on the banks of the Araxes and taken prisoner. Released from captivity after promising to pay a large ransom and concluding a treaty of peace, he returned homewards only to find revolution in full flood, and after a second defeat of his arms by the troops of Michael VII. he was compelled to resign the empire and retire to the island of Prote, where he soon died in great misery. It was during this reign that by the surrender of Bari (15th April 1071) the Byzantine empire lost its last hold upon Italy.

Rome a
Latin
city.

BOTH the city and the state of Rome are represented in tradition as having been gradually formed by the fusion of separate communities. The original settlement of Romulus is said to have been limited to the Palatine Mount. With this were united before the end of his reign the Capitoline and the Quirinal; Tullus Hostilius added the Cælian, Ancus Martius the Aventine; and finally Servius Tullius included the Esquiline and Viminal, and enclosed the whole seven hills with a stone wall. The growth of the state closely followed that of the city. To the original Romans on the Palatine were added successively the Sabine followers of King Tatius, Albans transplanted by Tullus, Latins by Ancus, and lastly the Etruscan comrades of Cæles Vibenna. This tradition is supported by other and more positive evidence. The race of the Luperici on February 15 was in fact a purification of the boundaries of the "ancient Palatine town,"¹ the "square Rome" of Ennius;² and the course taken is that described by Tacitus as the "pomoerium" of the city founded by Romulus.³ On the Esquiline, Varro mentions an "ancient city" and an "earthen rampart,"⁴ and the festival of the Septimontium is evidence of a union between this settlement and that on the Palatine.⁵ The fusion of these "Mounts" with a settlement on the Quirinal "Hill" is also attested by trustworthy evidence;⁶ and in particular the line taken by the procession of the Argei represents the enlarged boundaries of these united communities.⁷ Lastly, the Servian agger still remains as a witness to the final enclosure of the various settlements within a single ring-wall. But is tradition right in representing this fusion of distinct settlements as a fusion also of communities of different race? Much of what it says on this point may be at once dismissed as fabulous. The tales of Æneas and his Trojans, of Evander and his Arcadians, of the followers of Heracles, and of the still earlier Aborigines have no claim to a place in history;⁸ we cannot accept the tradition to which the Romans clung with proud humility of the asylum opened by Romulus, or believe that the ancestors of the Romans were a mixed concourse of outlaws and refugees,⁹ nor, while admitting the probability of the tradition that in remote times the "Sicels" had dwelt on the seven hills, can we allow them any part or lot in the historic Roman people.¹⁰ That this people were in the main homogeneous and in the main of Latin descent is unquestionable. Indications of the truth are not wanting even in the traditions themselves: King

Faunus who rules the Aborigines on the Palatine is Latin; "Latini" is the name assumed by the united Aborigines and Trojans; the immediate progenitors of Rome are the Latin Lavinium and the Latin Alba. The evidence of the language, the religion, the institutions and civilization of early Rome points to the same conclusion. The speech of the Romans is from the first Latin;¹¹ the oldest gods of Rome—Saturn, Janus, Jupiter, Juno, Diana, &c.—are all Latin; "rex," "praetor," "dictator," "curia," are Latin titles and institutions.¹² Geographically too the low hills by the Tiber form a part of the strip of coast-land from which the Latini took their name, and the primitive settlements, with their earthen ramparts and wooden palisades planted upon them out of reach both of human foes and of the malaria of the swampy low grounds, are only typical of the mode of settlement which the conditions of life dictated throughout Latium.¹³ But tradition insists on the admixture of at least two non-Latin elements, a Sabine and an Etruscan. The question as regards the latter will be more fully discussed hereafter; it is enough to say here that there is no satisfactory evidence that any one of the communities which combined to form Rome was Etruscan, or that there was any important Etruscan strain in the Roman blood.¹⁴ With the Sabines it is otherwise. That the union of the Palatine and Quirinal settlements which constituted so decisive a stage in the growth of Rome is represented as having been in reality a union of the original Latins with a band of Sabine invaders who had seized and held not only the Quirinal Hill but the northern and nearest peak of the Capitoline Mount. The tradition was evidently deeply rooted. The name of the Quirinal Hill itself was derived from the Sabine town of Cures.¹⁵ The ancient worships connected with it were said to be Sabine.¹⁶ One of the three old tribes, the Tities, was believed to represent the Sabine element;¹⁷ the second and the fourth kings are both of Sabine descent. By the great majority of modern writers the substance of the tradition, the fusion of a body of Sabine invaders with the original Latins, is accepted as historical; and even Mommsen allows its possibility, though he throws back the time of its occurrence to an earlier period than that of the union of the two settlements.¹⁸ We cannot here enter into the

The
Sabines in
Rome.

¹¹ The theory that Latin was a "mongrel speech" is now discarded; see Schwegler, i. 190, and LATIN LANGUAGE, vol. xiv. p. 327.

¹² The title "rex" occurs on inscriptions at Lanuvium, Tusculum, Bovillæ; Henzen, *Bullettino dell. Inst.*, 1868, p. 159; Orelli, 2279; *Corp. I. Lat.*, vi., 2125. For "dictator" and "praetor," see Livy, i. 23, viii. 3; cf. Marquardt, *Röm. Staatsverwaltung*, i. 475; for "curia," Serv. on *Æn.* i. 17; Marquardt, i. 467.

¹³ Helbig, *Die Italiker in d. Poebene*; Pohlmann, *Anfänge Roms*, 40; Abeken, *Mittel-Italien*, 61 sq.

¹⁴ The existence of a Tuscan quarter (Tuscan vicus) in early Rome probably points to nothing more than the presence in Rome of Etruscan artisans and craftsmen. The Etruscan origin ascribed to the third tribe, the "Luceres," is a mere guess; see Schwegler, i. 504, and Lange, *Röm. Alterth.*, i. 85.

¹⁵ Varro, *L. L.*, v. 51.

¹⁶ Varro, *L. L.*, v. 74; Schwegler, i. 248 sq.; but Mommsen (*R. G.*, i. 53) points out that most of these so-called Sabine deities are at least equally Latin.

¹⁷ Varro, *L. L.*, v. 55; Livy, i. 13.

¹⁸ Mommsen, *R. G.*, i. 43. Schwegler (*R. G.*, i. 478) accepts the tradition of a Sabine settlement on the Quirinal, and considers that in the united state the Sabine element predominated. Volquardsen (*Rhein. Mus.*, xxxiii. 559) believes in a complete Sabine conquest; and so does Zöllner (*Latium u. Rom*, Leipzig, 1878), who, however, places it after the expulsion of the Tarquins. Gilbert (*Topogr.*, i. cap. 5) accepts the Sabine settlement, but holds rightly that in the union the Latin element decisively predominated.

¹ Varro, *L. L.*, vi. 34.

² Fest., 258; Varro ap. Solinus, i. 17.

³ Tac., *Ann.*, xii. 24. For a full discussion of the exact limits of the Palatine city see Smith, *Dict. Geog.*, s. v. "Roma"; Jordan, *Topog. d. Stadt Rom*, i. cap. 2; Gilbert, *Topog. u. Gesch. d. Stadt Rom*, i. caps. 1, 2; and "Topography" below.

⁴ *L. L.*, v. 48; cf. *ibid.*, 50.

⁵ Festus, 348; Jordan, i. 199; Gilbert, i. 161. The seven "montes" are the Palatine with the Velia and Germalus, the Subura, and the three points of the Esquiline (Fagutal, Oppius, and Cispius).

⁶ See Mommsen, *R. G.* (7th ed.), i. 51.

⁷ Varro, *L. L.*, v. 45, vii. 44; Jordan, ii. 237.

⁸ For these traditions see Dionys., i. 31–71.

⁹ For a criticism of the myth of the asylum see Schwegler, *R. G.*, i. 465 sq., who, however, exaggerates the mixed character of the Roman people. Hegel, *Phil. d. Gesch.*, 345, takes the story seriously.

¹⁰ Dionys., i. 9; Thuc., vi. 2; Dionys., i. 16, ii. 1.

question at length, but two statements may be safely made respecting it. The Sabine invasion, if it took place at all, must have taken place far back in the prehistoric age; it must have been on a small scale; and the Sabine invaders must have amalgamated easily and completely with the Latin settlers. The structure of the early Roman state, while it bears evident marks of a fusion of communities, shows no traces of a mixture of race. Nor is it easy to point to any provably Sabine element in the language, religion, or civilization of primitive Rome.¹ The theory of a Sabine conquest can hardly be maintained in the face of the predominantly Latin character of both people and institutions. On the other hand, the probability of a Sabine raid and a Sabine settlement, possibly on the Quirinal Hill, in very early times may be admitted. The incursions of the highland Apennine tribes into the lowlands fill a large place in early Italian history. The Latins were said to have originally descended from the mountain glens near Reate.² The invasions of Campania and of Magna Græcia by Sabellian tribes are matter of history, and the Sabines themselves are represented as a restless highland people, ever seeking new homes in richer lands.³ In very early days they appear on the borders of Latium, in close proximity to Rome, and Sabine forays are familiar and frequent occurrences in the old legends.

The early state. Such is all we know of the manner in which the separate settlements on the seven hills grew into a single city and community. How long Rome took in the making, or when or by whom the work was completed, we cannot say. Nor is it possible to give more than a very meagre outline of the constitution and of the history of the united state in the early days of its existence.

The people. The "populus Romanus" was, we are told, divided into three tribes, Ramnes, Tities, and Luceres,⁴ and into thirty "curiæ." The three tribes probably represent a primitive clan division, older than the Roman state itself. They survived in later times only as divisions of the ancient "equitum centuriæ," and even in the accounts of the earliest constitution they have ceased to serve as a political division of the people.⁵ Of far greater importance is the division into "curiæ." In Cicero's time there were still curies, curial festivals, and curiate assemblies, and modern authors are unquestionably right in regarding the curia as the keystone of the primitive political system. It was a primitive association held together by participation in common "sacra," and possessing common festivals, common priests, and a common chapel, hall, and hearth. The members of a curia were very probably neighbours and kinsmen, but the curia seems to represent a stage in political development midway between that in which clan-ship is the sole bond of union and that in which such claims as those of territorial contiguity and ownership of land have obtained recognition. As separate associations the curiæ

are probably older than the Roman state, but,⁶ however this may be, it is certain that of this state when formed they constituted the only effective political subdivisions. The members of the thirty curiæ are the *populus Romanus*, and the earliest known condition of Roman citizenship is the "communio sacrorum," partnership in the curial "sacra." Below the curia there was no further political division, for there is no reason to believe that the curia was ever formally subdivided into a fixed number of gentes and families.⁷ Nor can we assent to the view which would represent the curiæ as containing only the "patrician gentes." The primitive Roman people of the thirty curiæ included all the freemen of the community, simple as well as gentle.⁸

At their head was the "rex," the ruler of the united The king. people. The Roman "king" is not simply either the hereditary and patriarchal chief of a clan, the priestly head of a community bound together by common sacra, or the elected magistrate of a state, but a mixture of all three.⁹ In later times, when no "patrician magistrates" were forthcoming to hold the elections for their successors, a procedure was adopted which was believed to represent the manner in which the early kings had been appointed.¹⁰ In this procedure the ancient privileges of the old "gentes" and their elders, the importance of maintaining unbroken the continuity of the "sacra," on the transmission and observance of which the welfare of the community depended, and thirdly the rights of the freemen, are all recognized. On the death of a king, the auspicia, and with them the supreme authority, revert to the council of elders, the "patres," as representing the "gentes." By the "patres" an "interrex" is appointed, who in turn nominates a second; by him, or even by a third or fourth interrex, a new king is selected in consultation with the "patres." The king-designate is then proposed to the freemen assembled by their curiæ for their acceptance, and finally their formal acceptance is ratified by the "patres," as a security that the "sacra" of which they are the guardians have been respected.¹¹ Thus the king is in the first instance selected by the representatives of the old gentes, and they ratify his appointment. In form he is nominated directly by a predecessor from whose hands he receives the auspicia. But it is necessary also that the choice of the patres and the nomination of the interrex should be confirmed by a solemn vote of the community.

It is useless to attempt a precise definition of the prerogatives of the king when once installed in office. Tradition ascribes to him a position and powers closely

⁶ It is possible that the curiæ were originally connected with separate localities; cf. such names as *Foriensis*, *Veliensis* (Fest., 174; Gilbert, i. 218).

⁷ Niebuhr's supposition of ten gentes in each curia has nothing in its favour but the confused statement of Dionysius as to the purely military *δέκαδες* (Dionys., ii. 7; cf. Muller, *Philologus*, xxxiv. 96).

⁸ The view taken here on the vexed question of the purely patrician character of the curiæ is that of Mommsen (*Rom. Forschungen*, vol. i.).

⁹ Rubino, Genz, and Lange insist on the hereditary patriarchal character of the kingship, Ithne on its priestly side, Schwegler on its elective. Mommsen comes nearest to the view taken in the text, but fails to bring out the nature of the compromise on which the kingship rests.

¹⁰ Cic. *De Legg.*, iii. 3; Livy, iv. 7.

¹¹ "Patres auctores facti," Livy, i. 22; "patres fuere auctores," Id., i. 32. In 386 B.C. (Livy, viii. 12) the Publilian law directed that this sanction should be given beforehand, "ante initum suffragium," and thus reduced it to a meaningless form (Livy, i. 11). It is wrongly identified by Schwegler with the "lex curiata de imperio," which in Cicero's day followed and did not precede election. According to Cicero (*De Rep.*, ii. 13, 21), the proceedings included, in addition to the "creation" by the comitia curiata and the sanction of the patres, the introduction by the king himself of a lex curiata conferring the imperium and auspicia; but this theory, though generally accepted, is probably an inference from the practice of a later time, when the "creatio" had been transferred to the "comitia centuriata."

¹ See Mommsen, i. 43. The Sabine words in Latin, if not common to both dialects, were probably introduced later, or are Sabinized Latin (Mommsen, *Unterital. Dialekten*, 347). Schwegler's attempt to distinguish Sabine features in the Roman character is ingenious but unsatisfactory.

² Cato ap. Dionys., ii. 48, 49.

³ Cato ap. Dionys., ii. 48, 49. For the institution of the "ver sacrum" see Schwegler, *Röm. Gesch.*, i. 240; Nissen, *Templum*, iv.

⁴ The tradition connecting the Ramnes with Romulus and the Tities with Tatius is as old as Ennius (Varro, *L. L.*, v. 55). Mommsen (i. 41) explains Ramnes as = *Romani*, but this etymology is rejected by Schwegler and by Corssen. As regards the Luceres there is little to add to Livy's statement (i. 13), "nominis et originis causa incerta est." Cf., on the whole question, Schwegler, i. 505, and Volquardsen, *Rhein. Mus.*, xxxiii. 538.

⁵ They are traditionally connected only with the senate of 300 patres, with the primitive legion of 3000, with the vestal virgins, and with the augurs (Varro, *L. L.*, v. 81, 89, 91; Livy, x. 6; Festus, 344; Mommsen, i. 41, 74, 75; Genz, *Patricisch. Rom.*, 90).

resembling those of the heroic kings of Greece. He rules for life, and he is the sole ruler, unfettered by written statutes. He is the supreme judge, settling all disputes and punishing wrongdoers even with death. All other officials are appointed by him. He imposes taxes, distributes lands, and erects buildings. Senate and assembly meet only when he convenes them, and meet for little else than to receive communications from him. In war he is absolute leader,¹ and finally he is also the religious head of the community. It is his business to consult the gods on its behalf, to offer the solemn sacrifices, and to announce the days of the public festivals. Hard by his house was the common hearth of the state, where the vestal virgins cherished the sacred fire.

The
senate.

By the side of the king stood the senate, or council of elders. In the descriptions left us of the primitive senate, as in those of the "rex," we can discover traces of a transition from an earlier state of things when Rome was only an assemblage of clans or village communities, allied indeed, but each still ruled by its own chiefs and headmen, to one in which these groups have been fused into a single state under a common ruler. On the one hand the senate appears as a representative council of chiefs, with inalienable prerogatives of its own, and claiming to be the ultimate depository of the supreme authority and of the "sacra" connected with it. The senators are the "patres"; they are taken from the leading "gentes"; they hold their seats for life; to them the "auspicia" revert on the death of a king; they appoint the interrex from their own body, are consulted in the choice of the new king,² and their sanction is necessary to ratify the vote of the assembled freemen. On the other hand they are no longer supreme. They cannot appoint a king but with the consent of the community, and their relation to the king when appointed is one of subordination. Vacancies in their ranks are filled up by him, and they can but give him advice and counsel when he chooses to consult them.

The
assembly.

The popular assembly of united Rome in its earliest days was that in which the freemen met and voted by their curiæ (comitia curiata³). The assembly met in the comitium at the north-east end of the forum,⁴ at the summons and under the presidency of the king or, failing him, of the "interrex." By the "rex" or "interrex" the question was put, and the voting took place "curiatim," the curiæ being called up in turn. The vote of each curia was decided by the majority of individual votes, and a majority of the votes of the curiæ determined the final result. But the occasions on which the assembly could exercise its power must have been few. Their right to elect magistrates was apparently limited to the acceptance or rejection of the king proposed by the interrex. Of the passing of laws, in the later sense of the term, there is no trace in the kingly period. Dionysius's statement⁵ that they voted on questions of war and peace is improbable in itself and unsupported by tradition. They are indeed represented, in one instance, as deciding a capital case, but it is by the express permission of the king and not of right.⁶ Assemblies of the people were also, and probably more frequently, convened for other purposes. Not only did they meet to hear from the king the announcement of the high days and holidays for each month, and to witness such solemn religious rites as the inauguration of a priest, but their presence (and

sometimes their vote) was further required to authorize and attest certain acts, which in a later age assumed a more private character. The disposal of property by will⁷ and the solemn renunciation of family or gentile "sacra"⁸ could only take place in the presence of the assembled freemen, while for adoption⁹ (arrogatio) not only their presence but their formal consent was necessary.

Such in outline was the political structure of the Roman state at the earliest period known to us. It is clear that it belongs to a comparatively advanced stage in the development of society, and that a long previous history lies behind it. Traces of an older and more primitive order of things still linger in the three ancient shadowy tribes, in the curiæ and gentes, in many of the features noticeable in the senate; but they are traces of an order that has passed away. The supremacy of the state is established over the groups out of whose fusion it has grown, and such of these groups as still retain a distinct existence are merely private corporations. Private differences are settled and wrongdoers punished by the state tribunals, and even within the close limits of the family the authority of the head is limited by the claims of the state upon the services of the sons and dependants.

A history of this early Roman state is out of the question. The names, dates, and achievements of the first four kings are all too unsubstantial to form the basis of a sober narrative;¹⁰ a few points only can be considered as fairly well established. If we except the long eventless reign ascribed to King Numa, tradition represents the first kings as incessantly at war with their immediate neighbours. The details of these wars are no doubt mythical; but the implied condition of continual struggle, and the narrow range within which the struggle is confined, may be accepted as true. The picture drawn is that of a small community with a few square miles of territory, at deadly feud with its nearest neighbours, within a radius of some 12 miles round Rome. Nor, in spite of the repeated victories with which tradition credits Romulus, Ancus, and Tullus, does there seem to have been any real extension of Roman territory except towards the sea. Fidenæ remains Etruscan; the Sabines continue masters up to the Anio; Præneste, Gabii, and Tusculum are still untouched; and on this side it is doubtful if Roman territory, in spite of the possible destruction of Alba, extended to a greater distance than the sixth milestone from Rome.¹¹ But along the course of the Tiber below the city there was a decided advance. The fortification of the Janiculum, the building of the "pons publicus," the foundation of Ostia, and the acquisition of the saltworks near the sea may all be safely ascribed to this early period. Closely connected, too, with the control of the Tiber from Rome to the sea was the subjugation of the petty Latin communities lying south of the river; and the tradition of the conquest and destruction of Politorium, Tellenæ, and Ficana is confirmed by the absence in historical times of any Latin communities in this district.

With the reign of the fifth king Tarquinius Priscus a marked change takes place. The traditional accounts of Tarquins the last three kings not only wear a more historical air

⁷ Gaius, ii. 101.

⁸ Gell., xv. 27.

⁹ Gell., v. 19, "Comitia praebeantur, quae curiata appellantur." Cf. Cic. *Pro Domo*, 13, 14; and see ROMAN LAW.

¹⁰ By far the most complete criticism of the traditional accounts of the first four kings will be found in Schwegler's *Röm. Geschichte*, vol. i.; compare also Ihne's *Early Rome*, and Sir G. C. Lewis's *Credibility of Early Roman History*.

¹¹ The "fossa Cluilia," 5 miles from Rome (Liv. ii. 39), is regarded by Schwegler (i. 585) and by Mommsen (i. 45) as marking the Roman frontier towards Latium. Cf. Ovid., *Fast.*, ii. 681; Strabo, 230, "μεταδὲ γούνη τοῦ πέμπτου καὶ τοῦ ἑκτοῦ λίθου . . . τόπος φησὶν . . . ὅριον τῆς τότε Ῥωμαίων γῆς."

¹ For the references, see Schwegler, i. 646 sq.

² If the analogy of the "rex sacrorum" is to be trusted, the "king" could only be chosen from the ranks of the "patricii." Cic. *Pro Domo*, 14; Gaius, i. 122.

³ Cic. *De Rep.*, ii. 13; Dionys., ii. 14, &c.

⁴ Varro, *L. L.*, v. 155. For the position of the "comitium," see Smith, *Dict. Geog.*, s.v. "Roma," and Jordan, *Topog. d. Stadt Rom*.

⁵ Dionys., l.c.

⁶ Livy, i. 26; Dionys., iii. 22.

than those of the first four, but they describe something like a transformation of the Roman city and state. Under the rule of these latter kings the separate settlements are for the first time enclosed with a rampart of colossal size and extent.¹ The low grounds are drained, and a forum and circus elaborately laid out; on the Capitoline Mount a temple is erected, the massive foundations of which were an object of wonder even to Pliny.² To the same period are assigned the redivision of the city area into four new districts and the introduction of a new military system. The kings increase in power and surround themselves with new splendour. Abroad, too, Rome suddenly appears as a powerful state ruling far and wide over southern Etruria and Latium. These startling changes are, moreover, ascribed to kings of alien descent, who one and all ascend the throne in the teeth of established constitutional forms. Finally, with the expulsion of the last of them—the younger Tarquin—comes a sudden shrinkage of power. At the commencement of the republic Rome is once more a comparatively small state, with hostile and independent neighbours at her very doors. It is difficult to avoid the conviction that the true explanation of this phenomenon is to be found in the supposition that Rome during this period passed under the rule of powerful Etruscan lords.³ In the 7th and 6th centuries B.C., and probably earlier still, the Etruscans appear as ruling widely outside the limits of Etruria proper. They were supreme in the valley of the Po until their power there was broken by the irruption of Celtic tribes from beyond the Alps, and while still masters of the plains of Lombardy they established themselves in the rich lowlands of Campania, where they held their ground until the capture of Capua by the Samnite highlanders in 423 B.C. It is on the face of it improbable that a power which had extended its sway from the Alps to the Tiber, and from the Liris to Surrentum, should have left untouched the intervening stretch of country between the Tiber and the Liris. Nor are we without evidence of Etruscan rule in Latium.⁴ According to Dionysius there was a time when the Latins were known to the Greeks as Tyrrhenians, and Rome as a Tyrrhenian city.⁵ When Æneas landed in Italy the Latins were at feud with Turnus (Turrhenos? Dionys., i. 64) of Ardea, whose close ally is the ruthless Mezentius, prince of Cære, to whom the Latins had been forced to pay a tribute of wine.⁶ Cato declared the Volsci to have been once subject to Etruscan rule,⁷ and Etruscan remains found at Velitrae,⁸ as well as the second name of the Volscian Auxur, Tarracina (the city of Tarchon), tend to confirm his statement. Nearer still to Rome is Tusculum, with its significant name, and at Alba we hear of a prince Ταρχέριος,⁹ lawless and cruel like Mezentius, who consults the "oracle of Tethys in Tyrrhenia." Thus we find the Etruscan power encircling Rome on all sides, and in Rome itself a tradition of the rule of princes of Etruscan origin. The Tarquinii come from South Etruria; their name can hardly be anything else than the Latin equivalent of the Etruscan Tarchon, and is therefore possibly a title

(= "lord" or "prince") rather than a proper name.¹⁰ Even Servius Tullius was identified by Tuscan chroniclers with an Etruscan "Mastarna."¹¹ Again, what we are told of Etruscan conquests does not represent them as moving, like the Sabellian tribes, in large bodies and settling down *en masse* in the conquered districts. We hear rather of military raids led by ambitious chiefs who carve out principalities for themselves with their own good swords, and with their followers rule oppressively over alien and subject peoples.¹² And so at Rome the story of the Tarquins implies not a wave of Etruscan immigration so much as a rule of Etruscan princes over conquered Latins.

The achievements ascribed to the Tarquins are not less characteristic. Their despotic rule and splendour contrast with the primitive simplicity of the native kings. Only Etruscan builders, under the direction of wealthy and powerful Etruscan lords, could have built the great cloaca, the Servian wall, or the Capitoline temple,—monuments which challenged comparison with those of the emperors themselves. Nor do the traces of Greek influence upon Rome during this period¹³ conflict with the theory of an Etruscan supremacy; on the contrary, it is at least possible that it was thanks to the extended rule and wide connexions of her Etruscan rulers that Rome was first brought into direct contact with the Greeks, who had long traded with the Etruscan ports and influenced Etruscan culture.¹⁴

These Etruscan princes are represented, not only as having raised Rome for the time to a commanding position in Latium and lavished upon the city itself the resources of Etruscan civilization, but also as the authors of important internal changes. They are represented as favouring new men at the expense of the old patrician families, and as reorganizing the Roman army on a new footing, a policy natural enough in military princes of alien birth, and rendered possible by the additions which conquest had made to the original community. From among the leading families of the conquered Latin states a hundred new members were admitted to the senate, and these gentes thenceforth ranked as patrician, and became known as "gentes minores."¹⁵ The changes in the army begun, it is said, by the elder Tarquin and completed by Servius Tullius were more important. The basis of the primitive military system had been the three tribes, each of which furnished 1000 men to the legion and 100 to the cavalry.¹⁶ Tarquinius Priscus, we are told, contemplated the creation of three fresh tribes and three additional centuries of horsemen with new names,¹⁷ though in face of the opposition offered by the old families he contented himself with simply doubling the strength without altering the names of the old divisions.¹⁸ But the change attributed to

The Servian reforms

¹⁰ Müller-Deecke, i. 69, 70; Zöller, *Latium u. Rom*, 168; cf. Strabo, p. 219; Serv. on *Æn.*, x. 179, 198. The existence of an independent "gens Tarquinia" of Roman extraction (Schwegler, i. 678) is unproven and unlikely. Nor can "Tarquinius" mean "of Tarquinii"; this would require "Tarquiniensis" as a cognomen.

¹¹ See speech of Claudius, *Tab. Lugd.*, App. to Nipperdey's edition of the *Annals* of Tacitus, "Tusce Mastarna ei nomen erat." For the painting in the François tomb at Vulci, see Gardthausen, *Mastarna*, 29 sq.; *Annali dell. Instit.*, Rome, 1859.

⁹ Plut., *Rom.*, 2, παρανομώτατος καὶ ἀμόρτατος; cf. Rutulian Tarquinius, Virg., *Æn.*, x. 550.

Servius Tullius went far beyond this. His famous distribution of all freeholders (*assidui*) into tribes, classes, and centuries,¹ though subsequently adopted with modifications as the basis of the political system, was at first exclusively military in its nature and objects.² It amounted in fact to the formation of a new and enlarged army on a new footing. In this force, excepting in the case of the centuries of the horsemen, no regard was paid either to the old clan divisions, or to the semi-religious semi-political *curiæ*. In its ranks were included all freeholders within the Roman territory, whether members or not of any of the old divisions, and the organization of this new army of *assidui* was not less independent of the old system with its clannish and religious traditions and forms. The unit was the "centuria" or company of 100 men; the *centuriæ* were grouped in "classes" and drawn up in the order of the phalanx.³ The centuries in front were composed of the wealthier citizens, whose means enabled them to bear the cost of the complete equipments necessary for those who were to bear the brunt of the onset. These centuries formed the first class. Behind them stood the centuries of the second and third classes, less completely armed, but making up together with those of the first class the heavy-armed infantry.⁴ In the rear were the centuries of the fourth and fifth classes, recruited from the poorer freeholders, and serving only as light-armed troops. The entire available body of freeholders was divided into two equal portions, a reserve corps of "seniores" and a corps of "juniores" for active service. Each of these corps consisted of 85 centuries or 8500 men, i.e., of two legions of about 4200 men each, the normal strength of a consular legion under the early republic.⁵ It is noticeable also that the heavy-armed centuries of the three first classes in each of these legions represented a total of 3000 men, a number which agrees exactly with the number of heavy-armed troops in the legion as described by Polybius. Attached to the legions, but not included in them, were the companies of sappers and trumpeters. Lastly, to the six centuries of horsemen, which still retained the old tribal names, twelve more were added as a distinct body, and recruited from the wealthiest class of citizens.⁶ The four "tribes" also instituted by Servius were probably intended to serve as the basis for the levy of freeholders for the new army.⁷ As their names show, they corresponded with the natural local divisions of the city territory,⁸ but that they included freeholders residing on Roman territory but outside Rome is indicated by the fact that both Ostia and Alba belonged to the Palatine tribe.⁹

¹ Cic. *De Rep.*, ii. 22; Livy, i. 42; Dionys., iv. 16.

² This is recognized by Mommsen, Genz, and Soltan, as against Niebuhr, Schwegler, and Ihne. Even in the later "comitia centuriata" the traces of the originally military character of the organization are unmistakable.

³ The century ceased to represent companies of one hundred when the whole organization ceased to be military and became exclusively political.

⁴ The property qualification for service in the first class is given at 100,000 asses (Livy), for the second at 70,000, third 50,000, fourth 25,000, fifth 11,000. It was probably originally a certain acreage in land, afterwards translated into terms of money; cf. Mommsen, *Röm. Tribus*, 115.

⁵ Polyb., vi. 20; Mommsen, *Röm. Trib.*, 132 sq.

⁶ Livy, i. 43. Dionys. (iv. 18) and Cic. (*De Rep.*, ii. 22) ascribe the whole eighteen to Servius. But the six older centuries remained distinct, as the "sex suffragia" of the comitia centuriata; Cic. *De Rep.*, ii. 22.

⁷ Dionys., iv. 14, εἰς τὰς καταγραφὰς τῶν στρατιωτῶν.

⁸ Livy, i. 43. The four were Palatina, Suburana, Esquilina, Collina.

⁹ See Grotefend, *Imperium R. tributum descriptum*, 27, 67. The inclusion of landless men ("proletarii") in the tribes belongs to a later time, when the tribes had ceased to have a purely military significance; cf. the formation of a century of "capite censi."

The last of these Etruscan lords to rule in Rome was Tarquin the Proud. He is described as a splendid and despotic monarch. His sway extended over Latium as far south as Circeii. Aristodemus, tyrant of Cumæ, was his ally, and kinsmen of his own were princes at Collatia, at Gabii, and at Tusculum. The Volscian highlanders were chastised, and Signia with its massive walls was built to hold them in check. In Rome itself the Capitoline temple and the great cloaca bore witness to his power. But his rule pressed heavily upon the Romans, and at the last, on the news of the foul wrong done by his son Sextus to a noble Roman matron, Lucretia, the indignant people rose in revolt. Tarquin, who was away besieging Ardea, was deposed; sentence of exile was passed upon him and upon all his race; and the people swore that never again should a king rule in Rome. Freed from the tyrant, they chose for themselves two yearly magistrates who should exercise the supreme authority, and thus the republic of Rome was founded. Three times the banished Tarquin strove desperately to recover the throne he had lost. First of all the men of Veii and Tarquinii marched to his aid, but were defeated in a pitched battle on the Roman frontier. A year later Lars Porsena, prince of Clusium, at the head of all the powers of Etruria, appeared before the gates of Rome, and closely besieged the city, until, moved by the valour of his foe, he granted honourable terms of peace and withdrew.¹⁰ Once again, by Lake Regillus, the Romans fought victoriously for their liberty against Tarquin's son-in-law Mamilius, prince of Tusculum, and chief of the Latin name. Mamilius was slain; Tarquin in despair found a refuge at Cumæ, and there soon afterwards died.

So, in brief, ran the story of the flight of the kings, as it was told by the chroniclers whom Livy followed. Its details are most of them fabulous; it is crowded with inconsistencies and improbabilities; there are no trustworthy dates; the names even of the chief actors are probably fictitious, and the hand of the improver, Greek or Roman, is traceable throughout.¹¹ The struggle was doubtless longer and sharper, and the new constitution more gradually shaped, than tradition would have us believe. Possibly, too, this revolution in Rome was but a part of a widespread wave of change in Latium and central Italy, similar to that which in Greece swept away the old heroic monarchies. But there is no room for doubting the main facts of the emancipation of Rome from the rule of alien princes and the final abolition of the kingly office.

II. The Republic.

PERIOD I.: 509–265 B.C.¹²—(a) *The Struggle between the 245–489 Orders*.—It is characteristic of Rome that the change from monarchy to republic¹³ should have been made with the least possible disturbance of existing forms. The title of king was retained, though only as that of a priestly officer (*rex sacrorum*) to whom some of the religious functions of the former kings were transferred. The two annually elected consuls, or "praetores,"¹⁴ were regarded as joint heirs of the full kingly authority, and as holding the "imperium," and the correlative right of auspices, by

¹⁰ Livy, ii. 9–14. Pliny (*N. H.*, 34, 14) and Tacitus (*Ann.*, iii. 72) imply the existence of a tradition, possibly that of "Tuscan annalists," according to which Porsena actually made himself master of Rome. The whole story is fully criticized by Schwegler (ii. 181 sq.) and Zöller (*Latium u. Rom.*, p. 180).

¹¹ See the exhaustive criticism in Schwegler (ii. pp. 66–203).

¹² The dates in the margin throughout are the years from the foundation of the city.

¹³ Schwegler (ii. 92) suggests that the dictatorship formed an intermediate step between the monarchy and the consulate; cf. Ihne, *Röm. Forsch.*, 42.

¹⁴ For the title "praetor," see Mommsen, *Staatsrecht*, ii. 70, note.

direct transmission from the founder of the city. They were, it is true, elected or created by a new assembly, by the army of freeholders voting by their classes and centuries (*comitia centuriata*), and to this body was given also the right of passing laws; but nevertheless it was still by a vote of the 30 curies (*lex curiata*) that the supreme authority was formally conferred on the magistrates chosen by the centuries of freeholders, and both the choice of magistrates and the passing of laws still required the sanction of the patrician senators (*patrum auctoritas*).¹ Nor, lastly, were the legal prerogatives of the senate altered, although it is probable that before long plebeians were admitted to seats, if not to votes, and though its importance was gradually increased by the substitution of an annual magistracy for the life-long rule of a single king. But the abolition of the monarchy brought with it a change of the utmost importance in the actual working of the constitution. Though the distinction between patricians and plebeians was at least as old as the state itself, it is not until the establishment of the republic that it plays any part in the history of Rome. No sooner, however, was the overshadowing authority of the king removed than a struggle commenced between the two orders which lasted for more than two centuries. It was in no sense a struggle between a conquering and a conquered class, or between an exclusive citizen body and an unenfranchised mass outside its pale.² Patricians and plebeians were equally citizens of Rome, sprung of the same race and speaking the same tongue. The former were the members of those ancient "gentes" which had possibly been once the "chiefly" families in the small communities which preceded the united state, and which claimed by hereditary right a privileged position in the community. Only patricians could sit in the council of *patres*, and hence probably the name given to their order.³ To their representatives the supreme authority reverted on the death of the king; the due transmission of the auspices and the public worship of the state gods were their special care; and to them alone were known the traditional usages and forms which regulated the life of the people from day to day. To the "plebs" (the multitude, *πληθος*) belonged all who were not members of some patrician gens, whether independent freemen or attached as "clients"⁴ to one of the great houses. The plebeian was a citizen, with civil rights and a vote in the assembly of the curies, but he was excluded by ancient custom from all share in the higher honours of the state, and intermarriage with a patrician was not recognized as a properly legal union.

The revolution which expelled the Tarquins gave the patricians, who had mainly assisted in bringing it about, an overwhelming ascendancy in the state. The plebs had indeed gained something. Not only is it probable that the strictness of the old tie of clientship had somewhat relaxed, and that the number of the "clientes" was smaller and their dependence on patrician patrons less complete, but the ranks of the plebs had, under the later kings, been swelled by the admission of conquered Latins, and the freeholders among these had with others been enrolled in the Servian tribes, classes, and centuries. The establishment of the republic invested this military levy of free-

holders with political rights as an assembly, for by their votes the consuls were chosen and laws passed, and it was the plebeian freeholders who formed the main strength of the plebs in the struggle that followed. But these gains were greater in appearance than in reality. The plebeian freeholders commanded only a minority of votes in the *comitia centuriata*. In their choice of magistrates they were limited to the patrician candidates nominated by patrician presiding magistrates, and their choice required confirmation not only by the older and smaller assembly of the curiæ, in which the patricians and their clients predominated, but also by the patrician *patres*. They could only vote on laws proposed by patrician consuls, and here again the subsequent sanction of the *patres* was necessary. The whole procedure of the *comitia* was in short absolutely in the hands of their patrician presidents, and liable to every sort of interruption and suspension from patrician pontiffs and augurs.

But these political disabilities did not constitute the main grievance of the plebs in the early years of the republic. What they fought for was protection for their lives and liberties, and the object of attack was the despotic authority of the patrician magistrates. The consuls wielded the full "imperium" of the kings, and against this "consular authority" the plebeian, though a citizen, had no protection and no appeal, and matters were only worse when for the two consuls was substituted in some emergency a single, all-powerful, irresponsible dictator. In Rome, as in Greece, the first efforts of the people were directed against the arbitrary powers of the executive magistrate.

The history of this struggle between the orders opens with a concession made to the plebs by one of the consuls themselves, a concession possibly due to a desire to secure the allegiance of the plebeian freeholders, who formed the backbone of the army. In the very first year of the republic, according to the received chronology, P. Valerius Poplicola carried in the *comitia centuriata* his famous law of appeal.⁵ It enacted that no magistrate, saving only a dictator, should execute a capital sentence upon any Roman citizen unless the sentence had been confirmed on appeal by the assembly of the centuries. But, though the "right of appeal" granted by this law was justly regarded in later times as the greatest safeguard of a Roman's liberties, it was by no means at first so effective a protection as it afterwards became. For not only was the operation of the law limited to the bounds of the city, so that the consul in the field or on the march was left as absolute as before, but no security was provided for its observance even within the city by consuls resolved to disregard it.

It was by their own efforts that the plebeians first obtained any real protection against magisterial despotism. The traditional accounts of the first secession are confused and contradictory,⁶ but its causes and results are tolerably clear. The seceders were the plebeian legionaries recently returned from a victorious campaign. Indignant at the delay of the promised reforms, they ignored the order given them to march afresh against Volsci and Æqui, and instead entrenched themselves on a hill across the Anio, some three miles from Rome, and known afterwards as the Mons Sacer. The frightened patricians came to terms, and a solemn agreement (*lex sacrata*)⁷ was concluded between the orders, by which it was provided that henceforth the plebeians should have annual magistrates of their own (*tribuni plebis*), members of their own order, who should be authorized to protect them against the

de provoc-
atione.

The first
secession
and the
tribunate.

¹ The present writer has adopted the view of the "*patrum auctoritas*" taken by Mommsen (*Forsch.*, i.). Others identify it with the "*lex curiata*," or at least closely connect the two.

² Here again the present writer has in the main followed Mommsen, as against Schwegler, Ihne, Zöller, and others.

³ Cf. "*aedilis*," "*aedilicius*," &c.; Cic. *De Rep.*, ii. 12; Livy, i. 8. For a full discussion of other views, see Soltan, 179 sq.; Christensen, *Hermes*, ix. 196.

⁴ For the "*clientela*," see Mommsen (*Forsch.*, i.) and Schwegler (i. 688).

⁵ Livy, ii. 8, *lex Valeria de provocations*; Cic. *De Rep.*, ii. 31; cf. Livy, iii. 20.

⁶ Schwegler, ii. 226 sq.

⁷ Schwegler, ii. 251, note; Livy, i. 33.

305. consuls,¹ and a curse was invoked upon the man who should injure or impede the tribune in the performance of his duties.² The number of tribunes was at first two, then five, and before 449 B.C. it had been raised to ten. The fact that the institution of the tribunate of the plebs was the one result of the first secession is strong evidence that the object of the seceders was not economic or agrarian reform but protection against the consuls. The tribunate gave them this protection in a form which has no parallel in history. The tribune was not, and, strictly speaking, never became, a magistrate of the Roman people. His one proper prerogative was that of granting protection to the oppressed plebeian against a patrician officer. This prerogative (*jus auxilii*) was secured to the tribunes, not by the ordinary constitution, but by a special compact between the orders, and was protected by the ancient oath (*vetus jusjurandum*),³ which invoked a curse upon the violator of a tribune. This exceptional and anomalous right the tribunes could only exercise in person, within the limits of the "pomoerium," and against individual acts of magisterial oppression.⁴ It was only gradually that it expanded into the later wide power of interference with the whole machinery of government, and was supplemented by the legislative and judicial powers which rendered the tribunate of the last century B.C. so formidable, and the "tribunitia potestas" so essential an element in the authority of the emperors.

Lex
Publilia. But from the first the tribunes were for the plebs not only protectors but leaders, under whom they organized themselves in opposition to the patricians. The tribunes convened assemblies of the plebs (*concilia plebis*), and carried resolutions on questions of interest to the order. This incipient plebeian organization was materially advanced by the Publilian law of 471 B.C.,⁵ which appears to have formally recognized as lawful the plebeian *concilia*, and established also the tribune's right "*cum plebe agere*," i.e., to propose and carry resolutions in them. These assemblies were "*tributa*," or, in other words, the voting in them took place not by *curies* or centuries but by tribes. In them, lastly, after the Publilian law, if not before, the tribunes were annually elected.⁶ By this law the foundations were laid both of the powerful "*comitia tributa*"⁷ of later days and also of the legislative and judicial prerogatives of the tribunes. The patricians maintained indeed that resolutions (*plebiscita*) carried by tribunes in the *concilia plebis* were not binding on their order, but the moral weight of such resolutions, whether they affirmed a general principle or pronounced sentence of condemnation on some single patrician, was no doubt considerable.

Agrarian
agitation. It is at any rate certain that the passing of the Publilian law was followed by increased activity on the part of the tribunes. The attack on the consular authority was continued, and combined with it we have a persistent effort made to secure for the plebs their fair share of the common lands of the state (*agri publici*). The main object, however, of this early agrarian agitation was not economic but political. Membership in a tribe was now more than ever important for a plebeian, as giving a vote not only in the *comitia centuriata* but also in the plebeian "*concilia*," and membership in a tribe was possible as yet only for freeholders.⁸ To increase the number of freeholders

became therefore a matter of importance, and the simplest mode of increasing the number of freeholders was for the state to create freeholds on the common lands. But such a policy met with bitter opposition from the patricians, who had long enjoyed a virtual monopoly of these lands, and had excluded the plebeians even from those more recently acquired tracts which they had helped to win by their swords. Against this patrician monopoly the tribunes unceasingly protested, from a few years after the first secession down to 465 B.C.⁹ In that year a compromise was effected by the colonization of Antium, which had been taken the year before, and the plebeians obtained land without any disturbance of patrician occupiers. Eleven years later the common lands on the Aventine were reclaimed and assigned to plebeians by a *lex Icilia*.¹⁰

But this agrarian agitation, though destined subsequently to play an important part in the history, was for the time far less fruitful in results than that which was directed against the consular authority.

The proposal of C. Terentilius Arsa (460 B.C.) to appoint

294. a plebeian commission to draw up laws restricting the powers of the consuls¹¹ was resolutely opposed by the patricians, but after ten years of bitter party strife a compromise was effected. A commission of ten patricians was appointed, who should frame and publish a code of law binding equally on both the orders. These *decemviri* were to be the sole and supreme magistrates for the year, and the law of appeal was suspended in their favour.¹² The code which they promulgated, the famous XII. Tables, owed little of its importance to any novelties or improvements contained in its provisions. For the most part it seems merely to have reaffirmed existing usages and laws (see ROMAN LAW). But it substituted a public, written law, binding on all citizens of Rome, for an unwritten usage, the knowledge of which was confined to a few patricians, and which had been administered by this minority in their own interests. With the publication of the code the proper work of the *decemviri* was finished; nevertheless for the next year a fresh *decemvirate* was elected, and it is conceivable that the intention was permanently to substitute government by an irresponsible patrician "council of ten" for the old constitution. However this may have been, the tyranny of the *decemviri* themselves was fatal to the continuance of their power. We are told of a second secession of the plebs, this time to the Janiculum, and of negotiations with the senate, the result of which was the enforced abdication of the *decemviri*. The plebs joyfully chose for themselves tribunes, and in the *comitia centuriata* two consuls were created. But this restoration of the old regime was accompanied by legislation which made it an important crisis in the history of the struggle between the orders. With the fall of the *decemvirate* this struggle enters upon a new phase. The tribunes appear as at once more powerful and more strictly constitutional magistrates; the plebeian "*concilia*" take their place as formal *comitia* by the side of the older assemblies; and finally this improved machinery is used not simply in self-defence against patrician oppression but to obtain complete political equality. This change was no doubt due in part to circumstances outside legislation, above all to the expansion of the Roman state, which swelled the numbers and added to the social importance of the plebs as compared with the dwindling forces of the close corporation of patrician gentes. Still the legislation

Valerio-
Horatian
laws.

¹ Cic. *De Rep.*, ii. 34, "contra consulare imperium creati."

² Livy, iii. 55. ³ Festus, 318; Appian, *B. C.*, i. 138.

⁴ Gell., xiii. 12, "ut injuria quae coram fieret arceretur."

⁵ Livy, ii. 56, 60; Dionys., ix. 41; Schwegler, ii. 541; Soltau, 498.

⁶ For theories as to the original mode of appointing tribunes, see Mommsen, *Forsch.*, i. 185.

⁷ It is impossible to accept Mommsen's theory of a patricio-plebeian *comitia tributa*, as distinct from the plebeian assembly by tribes.

⁸ "Proletarii" were not admitted before the *decemvirate*, and according to Mommsen not until 310 B.C. There were now twenty-one tribes, seventeen having been added shortly after the establishment of the republic. Livy, ii. 21; Soltau, 481.

⁹ Whatever the historical value of the story of Sp. Cassius's agrarian law, the existence of a sustained agrarian agitation during this period can hardly be doubted (Mommsen, *Röm. Forsch.*, ii. 153; Schwegler, ii. 455).

¹⁰ Livy, iii. 31; Dionys., x. 31. The Aventine was said to have been previously common woodland.

¹¹ Livy, iii. 9.

¹² Livy, iii. 32.

of 449 clearly involved more than a restoration of the old form of government. The Valerio-Horatian laws, besides reaffirming the right of appeal and the inviolability of the tribunes, improved the position of the plebeian assemblies by enacting that "plebiscita" passed in them, and, as seems probable, approved by the patres, should be binding on patricians as well as plebeians.¹ By this law the tribunes obtained a recognized initiative in legislation. Henceforth the desired reforms were introduced and carried by tribunes in what were now styled "comitia tributa," and, if sanctioned by the patres, became laws of the state. From this period, too, must be dated the legalization at any rate of the tribune's right to impeach any citizen before the assembly of the tribes.² Henceforward there is no question of the tribune's right to propose to the plebs to impose a fine, or of the validity of the sentence when passed. The efficiency of these new weapons of attack was amply proved by the subsequent course of the struggle. Only a few years after the Valerio-Horatian legislation came the *lex Canuleia* (445 B.C.), by which mixed marriages between patricians and plebeians were declared lawful, and the social exclusiveness of the patriciate broken down. In the same year with this measure, and like it in the interests primarily of the wealthier plebeians, a vigorous attack commenced on the patrician monopoly of the consulate, and round this stronghold of patrician ascendancy the conflict raged until the passing of the Licinian laws in 367. The original proposal of Canuleius in 445 that the people should be allowed to elect a plebeian consul was evaded by a compromise. The senate resolved that for the next year, in the stead of consuls, six military tribunes with consular powers should be elected,³ and that the new office should be open to patricians and plebeians alike. The consulship was thus for the time saved from pollution, as the patricians phrased it, but the growing strength of the plebs is shown by the fact that in fifty years out of the seventy-eight between 444 and 366 they succeeded in obtaining the election of consular tribunes rather than of consuls. A good omen for their ultimate success was a victory they won in connexion with the inferior office of the quaestorship. Down to the time of the decemvirate the quaestors had been nominated by the consuls, but in 447 their appointment was transferred to the plebeian "comitia tributa," and in 421 a plebeian first became eligible to the office.⁴ Despite, however, these discouragements, the patricians fought on. Each year they strove to secure the creation of consuls rather than consular tribunes, and failing this strained every nerve to secure for their own order at least a majority among the latter. Even the institution of the censorship (435), though rendered desirable by the increasing importance and complexity of the census, was, it is probable, due in part to their desire to discount beforehand the threatened loss of the consulship by diminishing its powers.⁵ Other causes, too, helped to protract the struggle. Between the wealthier plebeians, who were ambitious of high office, and the poorer, whose minds were set rather on allotments of land, there was a division of interest of which the patricians were not slow to take

advantage, and to this must be added the pressure of war. The death struggle with Veii and the sack of Rome by the Gauls absorbed for the time all the energies of the community. In 377, however, two of the tribunes, 377. C. Licinius Stolo and L. Sextius, came forward with proposals which united all sections of the plebs in their support. Their proposals were as follows:⁶—(1) that consuls and not consular tribunes be elected; (2) that one consul at least should be a plebeian; (3) that the priestly college, which had the charge of the Sibylline books, should consist of ten members instead of two, and that of these half should be plebeians; (4) that no single citizen should hold in occupation more than 500 acres of the common lands, or pasture upon them more than 100 head of cattle and 500 sheep; (5) that all landowners should employ a certain amount of free as well as slave labour on their estates; (6) that interest already paid on debts should be deducted from the principal, and the remainder paid off in three years. The three last proposals were obviously intended to meet the demands of the poorer plebeians, and to secure their support for the first half of the scheme. Ten years of bitter conflict followed, but at last, in 367 387. B.C., the Licinian rogations became law, and one of their authors, L. Sextius, was created the first plebeian consul. For the moment it was some consolation to the patricians that they not only succeeded in detaching from the consulship the administration of civil law, which was entrusted to a separate officer, "praetor urbanus," to be elected by the comitia of the centuries, with an understanding apparently that he should be a patrician, but also obtained the institution of two additional aediles ("aediles curules"), who were in like manner to be members of their own order.⁷ With the opening of the consulship, however, the issue of the long contest was virtually decided, and the next eighty years witnessed a rapid succession of plebeian victories. Now that a plebeian consul might preside at the elections, Opening of the magistrates. the main difficulty in the way of the nomination and election of plebeian candidates was removed. The proposed patrician monopoly of the new curule aedileship was almost instantly abandoned. In 356 the first plebeian 398. was made dictator, in 350 the censorship, and in 337 the 404, 417. praetorship were filled for the first time by plebeians, and lastly, in 300, by the *lex Ogulnia*, even the sacred 454. colleges of the pontiffs and augurs, the old strongholds of patrician supremacy, were thrown open to the plebs.⁸ The patricians lost also the control they had exercised so long over the action of the people in assembly. The "patrum auctoritas," the sanction given or refused by the patrician senators to laws and to elections, had hitherto been a powerful weapon in their hands. But in 339 a 415. law of Q. Publilius Philo, a plebeian dictator, enacted Publilian that this sanction should be given beforehand to all laws;⁹ laws. and by a *lex Maenia*, carried apparently some fifty years later, the same rule was extended to elections. Henceforward the "patrum auctoritas" sank into a meaningless form, though as such it still survived in the time of Livy. A second Publilian law affirmed afresh the validity of "plebiscita," i.e., of measures carried in the plebeian comitia tributa. Apparently, however, their validity was Lex Hor. still left subject to some conditions, for in 287 a *lex tensia*. Hortensia, carried by another plebeian dictator, was 467. found necessary finally to settle the question.¹⁰ From 287 onwards it is certain that measures passed by the plebs, voting by their tribes, had the full force of laws without

¹ Livy, iii. 55, "quum veluti in controverso jure esset, tenerentur patres plebiscitis legem comitiis centuriatis tulere, ut quod tributum plebs jussisset populum teneret, qua lege tribuniciis rogationibus telum acerrimum datum est." What were the precise conditions under which a "plebiscitum" became law, and what was the exact effect of the *lex Publilia* of 339 and the *lex Hortensia* of 287, can only be conjectured. One of the two last can hardly have been more than a reaffirmation of a previous law.

² After the decemvirate, the tribunes no longer pronounce capital sentences. They propose fines, which are confirmed by the comitia tributa.

any further conditions whatsoever. The legislative independence of the plebeian assembly was secured, and with this crowning victory ended the long struggle between the orders.

(b) *Conquest of Italy*.—Twelve years after the passing of the lex Hortensia, King Pyrrhus, beaten at Beneventum, withdrew from Italy, and Rome was left mistress of the peninsula. The steps by which this supremacy had been won have now to be traced. Under the rule of her Etruscan princes Rome spread her sway over the lowlands of Latium, and her arms were a terror to the warlike highlanders of the Sabine and Volscian hills. But with their fall this miniature empire fell also, and at first it seemed as if the infant republic, torn by internal dissensions, must succumb to the foes who threatened it from so many sides at once. It was only after one hundred and fifty years of almost constant war that Rome succeeded in rolling back the tide of invasion and in establishing her supremacy over the neighbouring lowlands and over the hill country which bordered them to the east and south. The close of this first stage in her external growth is conveniently marked by the first collision with the Sabellian peoples beyond the Liris in 343.¹ In marked contrast with the slowness of her advance up to this point is the fact that only seventy-five years more were needed for the virtual subjugation of all the rest of the peninsula (343–269).

The expulsion of the Tarquins from Rome, followed as it seems to have been by the emancipation from Etruscan supremacy of all the country between the Tiber and the Liris, entirely altered the aspect of affairs. North of the Tiber the powerful Etruscan city of Veii, after a vain attempt to restore the Tarquins, relapsed into an attitude of sullen hostility towards Rome, which, down to the outbreak of the final struggle in 407, found vent in constant and harassing border forays. The Sabines recommenced their raids across the Anio; from their hills to the south-east the Æqui pressed forward as far as the eastern spurs of the Alban range, and ravaged the plain country between that range and the Sabine mountains; the Volsci overran the coast-lands as far as Antium, established themselves at Velitrae, and even ravaged the fields within a few miles of Rome. But the good fortune of Rome did not leave her to face these foes single-handed, and it is a significant fact that the history of the Roman advance begins, not with a brilliant victory, but with a useful and timely alliance. According to Livy, it was in 493, only a few years after the defeat of the prince of Tusculum at Lake Regillus, that a treaty was concluded between Rome and the Latin communities of the Campagna.² The alliance was in every respect natural. The Latins were the near neighbours and kinsmen of the Romans, and both Romans and Latins were just freed from Etruscan rule to find themselves as lowlanders and dwellers in towns face to face with a common foe in the ruder hill tribes on their borders. The exact terms of the treaty cannot, any more than the precise circumstances under which it was concluded, be stated with certainty (see LATIUM), but two points seem clear. There was at first a genuine equality in the relations between the allies; Romans and Latins, though combining for defence and offence, did so without sacrificing their separate freedom of action, even in the matter of waging wars independently of each other.³ But, secondly, Rome enjoyed from the first one inestimable advantage. The Latins lay between her and the most active of her foes, the Æqui and Volsci, and served to protect her territories at the expense of their own. Behind this barrier Rome grew strong, and the close of the Æquian and Volscian wars left the Latins

her dependents rather than her allies. Beyond the limits of the Campagna Rome found a second ally, hardly less useful than the Latins, in the tribe of the Hernici ("the men of the rocks"), in the valley of the Trerus, who had equal reason with the Romans and Latins to dread the Volsci and Æqui, while their position midway between the two latter peoples made them valuable auxiliaries to the lowlanders of the Campagna.

The treaty with the Hernici is said to have been concluded in 486,⁴ and the confederacy of the three peoples 268. —Romans, Latins, and Hernicans—lasted down to the great Latin war in 340. Confused and untrustworthy as 414. are the chronicles of the early wars of Rome, it is clear that notwithstanding the acquisition of these allies Rome made but little way against her foes during the first fifty years of the existence of the republic. In 474, it is true, 280. an end was put for a time to the harassing border feud with Veii by a forty years' peace, an advantage due not so much to Roman valour as to the increasing dangers from other quarters which were threatening the Etruscan states.⁵ But this partial success stands alone, and down to 449 the raids of Sabines, Æqui, and Volsci continue 305. without intermission, and are occasionally carried up to the very walls of Rome. Very different is the impression left by the annals of the next sixty years (449–390). 305–364. During this period there is an unmistakable development of Roman power on all sides.

In southern Etruria the capture of Veii (396) virtually Capture gave Rome the mastery as far as the Ciminian forest. of Veii. Sutrium and Nepete, "the gates of Etruria," became 358. her allies and guarded her interests against any attack from the Etruscan communities to the north, while along the Tiber valley her suzerainty was acknowledged as far as Capena and Falerii. On the Anio frontier we hear of no disturbances from 449 until some ten years after the sack of Rome by the Gauls. In 446 the Æqui 308. appear for the last time before the gates of Rome. After 418 they disappear from Mount Algidus, and in 336. the same year the communications of Rome and Latium with the Hernici in the Trerus valley were secured by the capture and colonization of Labicum. Successive invasions, too, broke the strength of the Volsci, and in 393 361. a Latin colony was founded as far south as Circeii. In part, no doubt, these Roman successes were due to the improved condition of affairs in Rome itself, consequent upon the great reforms carried between 450 and 442; but 304–312. it is equally certain that now as often afterwards fortune befriended Rome by weakening, or by diverting the attention of, her opponents. In particular, her rapid advance in southern Etruria was facilitated by the heavy blows Decline of Etruscan power. inflicted upon the Etruscans during the 5th century B.C. by Celts, Greeks, and Samnites. By the close of this century the Celts had expelled them from the rich plains of what was afterwards known as Cisalpine Gaul, and were even threatening to advance across the Apennines into Etruria proper. The Sicilian Greeks, headed by the tyrants of Syracuse, wrested from them their mastery of the seas, and finally, on the capture of Capua by the Samnites in 423, they lost their possessions in the fertile 331. Campanian plain. These conquests of the Samnites were part of a great southward movement of the highland Sabellian peoples, the immediate effects of which upon the fortunes of Rome were not confined to the weakening of the Etruscan power. It is probable that the cessation of the Sabine raids across the Anio was partly due to the new outlets which were opened southwards for the restless and populous hill tribes which had so long disturbed the peace of the Latin lowlands. We may conjecture, also,

that the growing feebleness exhibited by Volsci and Æqui was in some measure caused by the pressure upon their rear of the Sabellian clans which at this time established themselves near the Fucine Lake and along the course of the Liris.

Sack of Rome by the Gauls. 363.

But in 390, only six years after the great victory over her ancient rival Veii, the Roman advance was for a moment checked by a disaster which threatened to alter the course of history in Italy, and which left a lasting impress on the Roman mind. In 391 a Celtic horde left their newly won lands on the Adriatic, and, crossing the Apennines into Etruria, laid siege to the Etruscan city of Clusium (Chiusi). Thence, provoked, it is said, by the conduct of the Roman ambassadors, who, forgetting their sacred character, had fought in the ranks of Clusium and slain a Celtic chief, the barbarians marched upon Rome. On July 18, 390 B.C., only a few miles from Rome, was fought the disastrous battle of the Allia. The defeat of the Romans was complete, and Rome lay at the mercy of her foe. But in characteristic fashion the Celts halted three days to enjoy the fruits of victory, and time was thus given to put the Capitol at least in a state of defence. The arrival of the barbarians was followed by the sack of the city, but the Capitol remained impregnable. For seven months they besieged it, and then in as sudden a fashion as they had come they disappeared. The Roman chroniclers explain their retreat in their own way, by the fortunate appearance of Camillus with the troops which he had collected, at the very moment when famine had forced the garrison on the Capitol to accept terms. More probably the news that their lands across the Apennines were threatened by the Veneti, coupled with the unaccustomed tedium of a long siege and the difficulty of obtaining supplies, inclined the Celts to accept readily a heavy ransom as the price of their withdrawal. But, whatever the reason, it is certain that they retreated, and, though during the next fifty years marauding bands appeared at intervals in the neighbourhood of Rome, and even once penetrated as far south as Campania (361-360), the Celts never obtained any footing in Italy outside the plains in the north which they had made their own.

393-4.

Annexation of southern Etruria.

Nor, in spite of the defeat on the Allia and the sack of the city, was Rome weakened except for the moment by the Celtic attack. The storm passed away as rapidly as it had come on. The city was hastily rebuilt, and Rome dismayed the enemies who hastened to take advantage of her misfortunes by her undiminished vigour. Her conquests in southern Etruria were successfully defended against repeated attacks from the Etruscans to the north.

367.

The creation in 387 of four new tribes (Stellatina, Sabatina, Tromentina, Arniensis) marked the final annexation of the territory of Veii and of the lands lying along the Tiber valley. A few years later Latin colonies were established at Sutrium and Nepete for the more effectual defence of the frontier, and finally, in 353, the subjugation of South Etruria was completed by the submission of Cære (Cervetri) and its partial incorporation with the Roman state as a "municipium sine suffragio"—the first, it is said, of its kind.¹

401.

Successes against Æqui and Volsci. 364-411.

Next to the settlement of southern Etruria, the most important of the successes gained by Rome between 390 and 343 B.C. were those won against her old foes the Æqui and Volsci, and her old allies the Latins and Hernicans. The Æqui indeed, already weakened by their long feud with Rome, and hard pressed by the Sabellian tribes in their rear, were easily dealt with, and after the campaign of 389 we have no further mention of an

Æquian war until the last Æquian rising in 304. The 450. Volsci, who in 389 had advanced to Lanuvium, were met and utterly defeated by M. Furius Camillus, the conqueror of Veii, and this victory was followed up by the gradual subjugation to Rome of all the lowland country lying between the hills and the sea as far south as Tarracina. Latin colonies were established at Satricum (385), at Setia (379), and at Antium and Tarracina some 369, 375. time before 348. In 358 two fresh Roman tribes (Pomp-406, 396. tina and Publilia) were formed in the same district.²

Rome had now nothing more to fear from the foes who Re- a century ago had threatened her very existence. The organization of the lowland country, of which she was the natural centre, the Latin league. from the Ciminian forest to Tarracina, was quiet, and within its limits Rome was by far the strongest power. But she had now to reckon with the old and faithful allies to whose loyal aid her present position was largely due. The Latins and Hernicans had suffered severely in the Æquian and Volscian wars; it is probable that not a few of the smaller communities included in the league had either been destroyed or been absorbed by larger states, and the independence of all alike was threatened by the growing power of Rome. The sack of Rome by the Celts gave them an opportunity of reasserting their independence, and we are consequently told that this disaster was immediately followed by the temporary dissolution of the confederacy, and this again a few years later by a series of actual conflicts between Rome and her former allies. Between 383 and 358 we hear of wars with Tibur, Præneste, 371-396. Tusculum, Lanuvium, Circeii, and the Hernici. But in all Rome was successful. In 382 Tusculum was fully 372. incorporated with the Roman state by the bestowal of the full franchise³; in 358, according to both Livy and 396. Polybius the old alliance was formally renewed with Latins and Hernicans. We cannot, however, be wrong in assuming that the position of the allies under the new league was far inferior to that accorded them by the treaty of Spurius Cassius.⁴ Henceforth they were the subjects rather than the equals of Rome, a position which it is evident that they accepted much against their will, and from which they were yet to make one last effort to escape.

We have now reached the close of the first stage in Rome's advance towards supremacy in Italy. By 343 411. B.C. she was already mistress both of the low country stretching from the Ciminian forest to Tarracina and Circeii and of the bordering highlands. Her own territory had largely increased. Across the Tiber the lands of Veii, Capena, and Cære were nearly all Roman, while in Latium she had carried her frontiers to Tusculum on the Alban range and to the southernmost limits of the Pomptine district. And this territory was protected by a circle of dependent allies and colonies reaching northward to Sutrium and Nepete, and southward to Sora on the upper Liris, and to Circeii on the coast. Already, too, she was beginning to be recognized as a power outside the limits of the Latin lowlands. The fame of the capture of Rome by the Celts had reached Athens, and her subsequent victories over marauding Celtic bands had given her prestige in South Italy as a bulwark against northern barbarians. In 354 she had formed her first connexions 400. beyond the Liris by a treaty with the Samnites, and in 348 followed a far more important treaty with the great 406. maritime state of Carthage.⁵

Rome had won her supremacy from the Ciminian forest

Advance beyond the Liris, and the Samnite Wars.

331, 334.

First Samnite War.

411.

413.

The Latin War.

to the Liris as the champion of the comparatively civilized communities of the lowlands against the rude highland tribes which threatened to overrun them, and so, when her legions first crossed the Liris, it was in answer to an appeal from a lowland city against invaders from the hills. While she was engaged in clearing Latium of Volsci and Æqui, the Sabellian tribes of the central Apennines had rapidly spread over the southern half of the peninsula. Foremost among these tribes were the Samnites, a portion of whom had captured the Etruscan city of Capua in 423, the Greek Cumæ in 420, and had since then ruled as masters over the fertile Campanian territory. But in their new homes the conquerors soon lost all sense of relationship and sympathy with their highland brethren. They dwelt in cities, amassed wealth, and inherited the civilization of the Greeks and Etruscans whom they had dispossessed;¹ above all, they had before long to defend themselves in their turn against the attacks of their ruder kinsmen from the hills, and it was for aid against these that the Samnites of Campania appealed to the rising state which had already made herself known as the bulwark of the lowlands north of the Liris, and which with her Latin and Hernican allies had scarcely less interest than the Campanian cities themselves in checking the raids of the highland Samnite tribes.

The Campanian appeal was listened to. Rome with her confederates entered into alliance with Capua and the neighbouring Campanian towns, and war was formally declared (343) against the Samnites.² While to the Latins and Hernicans was entrusted apparently the defence of Latium and the Hernican valley against the northerly members of the Samnite confederacy, the Romans themselves undertook the task of driving the invaders out of Campania. After two campaigns the war was ended in 341 by a treaty, and the Samnites withdrew from the lowlands, leaving Rome the recognized suzerain of the Campanian cities which had sought her aid.³

There is no doubt that the check thus given by Rome to the advance of the hitherto invincible Sabellian highlanders not only made her the natural head and champion of the low countries, south as well as north of the Liris, but also considerably added to her prestige. Carthage sent her congratulations, and the Etruscan city of Falerii voluntarily enrolled herself among the allies of Rome. Of even greater service, however, was the fact that for fifteen years the Samnites remained quiet, for this inactivity, whatever its cause, enabled Rome triumphantly to surmount a danger which threatened for the moment to wreck her whole position. This danger was nothing less than a desperate effort on the part of nearly all her allies and dependents south of the Tiber to throw off the yoke of her supremacy. The way was led by her ancient confederates the Latins, whose smouldering discontent broke into open flame directly the fear of a Samnite attack was removed. From the Latin Campagna and the Sabine hills the revolt spread westward and southward to Antium and Tarracina, and even to the towns of the Campanian plain, where the mass of the inhabitants at once repudiated the alliance formed with Rome by the ruling class. The struggle was sharp but short. In two pitched battles⁴ the strength of the insurrection was broken, and two more campaigns sufficed for the complete reduction of such of the insurgent communities as still held out. The revolt crushed, Rome set her-

self deliberately to the task of re-establishing on a new Settlement and firmer basis her supremacy over the lowlands, and in doing so laid the foundations of that marvellous organization which was destined to spread rapidly over Italy, and to withstand the attacks even of Hannibal. The old historic Latin league ceased to exist, though its memory was still preserved by the yearly Latin festival on the Alban Mount. Most if not all of the common land of the league became Roman territory;⁵ five at least of the old Latin cities were compelled to accept the Roman franchise⁶ and enter the pale of the Roman state. The rest, with the Latin colonies, were ranked as Latin allies of Rome, but on terms which secured their complete dependence upon the sovereign city. The policy of isolation, which became so cardinal a principle of Roman rule, was now first systematically applied. No rights of "conubium" or "commercium" were any longer to exist between these communities. Their federal councils were prohibited, and all federal action independent of Rome forbidden.⁷

In future they were to have nothing in common but their common connexion with Rome, a connexion based in each case on a separate treaty between the individual Latin community and Rome. The Latin allied state retained its internal independence and the old rights of intermarriage and commerce with Rome, but it lost all freedom of action in external affairs. It could wage no wars, conclude no treaties, and was bound, so the phrase ran, to have always the same foes and friends as Rome herself. In Campania and the coast-lands and of connecting Campania with Rome, a policy of annexation was considered safer than that of alliance. Of the two frontier posts of the Volsci, Antium and Velitræ, the former was constituted a Roman colony, its long galleys burnt and their prows set up in the Forum at Rome, while the walls of Velitræ were razed to the ground, its leading men banished beyond the Tiber, and their lands given to Roman settlers. Farther south on the route to Campania, Fundi and Formiæ were, after the precedent set in the case of Cære, declared Roman and granted the civil rights of Roman citizenship, while lastly in Campania itself the same status was given to Capua, Cumæ, and the smaller communities dependent upon them.⁸ During the ten years from 338 to 328 the 416-426. work of settlement was steadily continued. Tarracina, like Antium, was made a Roman colony. Privernum, the last Volscian town to offer resistance to Rome, was subdued in 330, part of its territory allotted to Roman citizens, and 424. the state itself forced to accept the Roman franchise. Lastly, to strengthen the lines of defence against the Sabellian tribes, two colonies with the rights of Latin allies were established at Fregellæ and at Cales. The settlement of the lowlands was accomplished. From the Ciminian forest to the southern extremity of the Campanian plain, the lands lying between the sea and the hills were now, with few exceptions, Roman territory, while along the frontiers from Sutrium and Nepete in the north to Cales in the south stretched the protecting line of the Latin allied states and colonies. As a single powerful and compact state with an outer circle of closely dependent allies, Rome now stood in sharp contrast with the disunited and degenerate cities of northern Etruria, the loosely organized tribes of the Apennines, and the decaying and disorderly Greek towns of the south.

492.

The strength of this system was now to be tried by a struggle with the one Italian people who were still ready and able to contest with Rome the supremacy of the peninsula. The passive attitude of the Samnites between 342 and 327 was no doubt largely due to the dangers which had suddenly threatened them in South Italy. But the death of Alexander of Epirus, in 332,¹ removed their only formidable opponent there, and left them free to turn their attention to the necessity of checking the steady advance of Rome. In 327, the year after the ominous foundation of a Roman colony at Fregellæ, a pretext for renewing the struggle was offered them. The Cumæan colony of Palæopolis² had incurred the wrath of Rome by its raids into her territory in Campania. The Samnites sent a force to defend it, and Rome replied by a declaration of war. The two opponents were not at first sight unequally matched, and had the Sabellian tribes held firmly together the issue of the struggle might have been different. As it was, however, the Lucanians to the south actually joined Rome from the first, while the northern clans Marsi, Vestini, Pæligni, Frentani, after a feeble and lukewarm resistance, subsided into a neutrality which was exchanged in 304 for a formal alliance with Rome. An even greater advantage to Rome from the outset was the enmity existing between Samnites and the Apulians, the latter of whom from the first joined Rome and thus gave her a position in the rear of her enemy and in a country eminently well fitted for maintaining a large military force. These weaknesses on the Samnite side were amply illustrated by the events of the war.

The first seven or eight years were marked by one serious disaster to the Roman arms, the defeat at the Caudine Forks (321), but, when in 318 the Samnites asked for and obtained a two years' truce, Rome had succeeded not only in inflicting several severe blows upon her enemies but in isolating them from outside help. The Lucanians to the south were her allies. To the east, in the rear of Samnium, Apulia acknowledged the suzerainty of Rome, and Luceria, captured in 320, had been established as a base of Roman operations. Finally to the north the Romans had easily overcome the feeble resistance of the Vestini and Frentani, and secured through their territories a safe passage for their legions to Apulia. On the renewal of hostilities in 316, the Samnites, bent on escaping from the net which was being slowly drawn round them, made a series of desperate efforts to break through the lines of defence which protected Latium and Campania. Sora and Fregellæ on the upper Liris were captured by a sudden attack; the Ausones in the low country near the mouth of the same river were encouraged to revolt by the appearance of the Samnite army; and in Campania another army, attracted by rumours of disturbance, all but defeated the Roman consuls under the very walls of Capua. But these efforts were unavailing. Sora and Fregellæ were recovered as quickly as they had been lost, and the frontier there was strengthened by the establishment of a colony at Interamna. The Ausones were punished by the confiscation of their territory, and Roman supremacy further secured by the two colonies of Suessa and Pontia (312). The construction of the famous Via Appia,³ the work of the censor Appius Claudius Cæcus, opened a safe and direct route to Campania, while the capture of Nola deprived the Samnites of their last important stronghold in the Campanian lowlands. The failure of these attempts broke the courage even of the Samnites. Their hopes were indeed raised for a moment by the news that Etruria had risen against Rome (310), but their daring scheme of effecting a union with the Etruscans was frustrated by the energy of the Roman

generals. Five years later (305) the Romans revenged a 449. Samnite raid into Campania by an invasion of Samnium itself. Arpinum on the frontier was taken, and at last, after a twenty-two years' struggle, the Second Samnite War was closed by a renewal of the ancient treaty with Rome (304).⁴ 450.

The six years of peace which followed (304-298) 450-3. were characteristically employed by Rome in still further strengthening her position. Already, two years before the peace, a rash revolt of the Hernici⁵ had given Rome a pretext for finally annexing the territory of her ancient allies. The tribal confederacy was broken up, and all the Hernican communities, with the exception of three which had not joined the revolt, were incorporated with the Roman state as municipia, with the civil rights of the Roman franchise. Between the Hernican valley and the frontiers of the nearest Sabellian tribes lay what remained of the once formidable people of the Æqui. In their case, too, a revolt (304) was followed by the annexa- 450. tion of their territory, which was marked in this case by the formation there (301) of two Roman tribes (Aniensis 453. and Teretina).⁶ Not content with thus carrying the borders of their own territory up to the very frontiers of the Sabellian country, Rome succeeded in finally detaching from the Sabellian confederacy all the tribes lying⁷ between the north-east frontier of Latium and the Adriatic Sea. Henceforward the Marsi, Pæligni, Vestini, Marrucini, and Frentani were enrolled among the allies of Rome, and not only swelled her forces in the field but interposed a useful barrier between her enemies to the north in Etruria and Umbria and those to the south in Samnium, while they connected her directly with the friendly Apulians. Lastly, as a security for the fidelity at least of the nearest of these allies, colonies were planted in the Marsian territories at Carsæoli and at Alba Fuentia. A significant indication of the widening range of Rome's influence in Italy, and of the new responsibilities rapidly pressing upon her, is the fact that when in 302 the Spartan Cleonymus landed in 454. the territory of the Sallentini, far away in the south-east, he was met and repulsed by a Roman force.⁸

Six years after the conclusion of the treaty which ended Third the Second Samnite War, news arrived that the Samnites Samnite War, 298-290 = 456-464. were harassing the Lucanians. Rome at once interfered to protect her allies. Samnium was invaded in force, the country ravaged, and one stronghold after another captured. Unable any longer to hold their own in a position where they were hedged round by enemies, the Samnite leaders turned as a last hope to the communities of northern Etruria, to the free tribes of Umbria, and to the once dreaded Celts. With a splendid daring they formed the scheme of uniting all these peoples with themselves in a last desperate effort to break the power of Rome.

For some forty years after the final annexation of Romans southern Etruria (351 B.C.) matters had remained un- in N. Etruria. 403. changed in that quarter. Sutrium and Nepete still guarded the Roman frontier; the natural boundary of the Ciminian forest was still intact; and up the valley of the Tiber Rome had not advanced beyond Falerii, a few miles short of the most southerly Umbrian town Oriculum. But in 311, on the expiry, apparently, of the long truce 443. with Rome, concluded in 351, the northern Etruscans, alarmed no doubt by the rapid advances which Rome was making further south, rose in arms and attacked Sutrium. The attack, however, recoiled disastrously upon the heads of the assailants. A Roman force promptly relieved Sutrium, and its leader, Q. Fabius Rullianus, without awaiting orders from home, boldly plunged into the wilds of the Ciminian forest, and crossing them safely swept

with fire and sword over the rich lands to the north. Then turning southward he met and utterly defeated the forces which the Etruscans had hastily raised in the hopes of intercepting him at the Vadimonian Lake.¹ This decisive victory ended the war. The Etruscan cities, disunited among themselves, and enervated by long years of peace, abandoned the struggle for the time, paid a heavy indemnity, and concluded a truce with Rome (309-308). In the same year the promptitude of Fabius easily averted a threatened attack by the Umbrians, but Rome proceeded nevertheless to fortify herself in her invariable fashion against future dangers on this side, by an alliance with Ocriculum, which was followed ten years later by a colony at Nequinum,² and an alliance with the Picentes, whose position in the rear of Umbria rendered them as valuable to Rome as the Apulians had proved farther south.

445-6. Fourteen years had passed since the battle on the Battle of Sentinum, Vadimonian Lake, when the Samnites appeared on the borders of Etruria and called on the peoples of northern Italy to rise against the common enemy. Their appeal, backed by the presence of their troops, was successful. The Etruscans found courage to face the Roman legions once more; a few of the Umbrians joined them; but the most valuable allies to the Samnites were the Celts, who had for some time threatened a raid across the Apennines, and who now marched eagerly into Umbria and joined the coalition. The news that the Celts were in motion produced a startling effect at Rome, and every nerve was strained to meet this new danger. While two armies were left in southern Etruria as reserves, the two consuls, Fabius and Decius, both tried soldiers, marched northwards up the valley of the Tiber and into Umbria at the head of four Roman legions and a still larger force of Italian allies. At Sentinum, on the further side of the Apennines, they encountered the united forces of the Celts and Samnites, the Etruscans and Umbrians having, it is said, been withdrawn for the defence of their own homes. The battle that followed was desperate, and the Romans lost one of their consuls, Decius, and more than 8000 men.³ But the Roman victory was decisive. The Celts were annihilated, and the fear of a second Celtic attack on Rome removed. All danger from the coalition was over. The Etruscan communities gladly purchased peace by the payment of indemnities. The rising in Umbria, never formidable, died away, and the Samnites were left single-handed to bear the whole weight of the wrath of Rome. During four years more, however, they desperately defended their highland homes, and twice at least, in 293 and 292, they managed to place in the field a force sufficient to meet the Roman legions on equal terms. At last, in 290, the consul M. Curius Dentatus finally exhausted their power of resistance. Peace was concluded, and it is significant of the respect inspired at Rome by their indomitable courage that they were allowed to become the allies of Rome, on equal terms and without any sacrifice of independence.⁴

461, 462. Between the close of the Third Samnite War and the landing of Pyrrhus in 281 B.C. we find Rome engaged, as her wont was, in quietly extending and consolidating her power. In southern Italy she strengthened her hold on Apulia by planting on the borders of Apulia and Lucania the strong colony of Venusia.⁵ In central Italy the annexation of the Sabine country (290) carried her frontiers eastward to the borders of her Picentine allies on the Adriatic.⁶ Farther east, in the territory of the

Picentes themselves, she established colonies on the Adriatic coast at Hatria and Castrum (285-283).⁷ By 469-471. these measures her control of central Italy from sea to sea was secured, and an effectual barrier interposed between her possible enemies in the north and those in the south. North of the Picentes lay the territories of the Celtic Senones, stretching inland to the north-east borders of Etruria, and these too now fell into her hands. Ten years after their defeat at Sentinum (285-284) a Celtic force descended into Etruria, besieged Arretium, and defeated the relieving force despatched by Rome. In 283 the consul L. Cornelius Dolabella was sent to avenge the insult. He completely routed the Senones. Their lands were annexed by Rome, and a colony established at Sena on the coast. This success, followed as it was by the decisive defeat of the neighbouring tribe of the Boii, who had invaded Etruria and penetrated as far south as the Vadimonian Lake, awed the Celts into quiet, and for more than forty years there was comparative tranquillity in northern Italy.⁸

In the south, however, the claims of Rome to supremacy were now to be disputed by a new and formidable foe. At the close of the Third Samnite War the Greek cities on the southern coast of Italy found themselves once more harassed by the Sabellian tribes on their borders, whose energies, no longer absorbed by the long struggles in central Italy, now found an attractive opening southward. Naturally enough the Greeks, like the Capuans sixty years before, appealed for aid to Rome (283-282), 471-2. and like the Capuans they offered in return to recognize the suzerainty of the great Latin republic. In reply a Roman force under C. Fabricius marched into South Italy, easily routed the marauding bands of Lucanians, Bruttians, and Samnites, and established Roman garrisons in Locri, Croton, Rhegium, and Thurii. At Tarentum, the most powerful and flourishing of the Greek seaports, this sudden and rapid advance of Rome excited the greatest anxiety. Tarentum was already allied by treaty (301) 453. with Rome, and she had now to decide whether this treaty should be exchanged for one which would place her, like the other Greek communities, under the protectorate of Rome, or whether she should find some ally able and willing to assist in making a last stand for independence. The former course, in Tarentum, as before at Capua, was the one favoured by the aristocratic party; the latter was eagerly supported by the mass of the people and their leaders. While matters were still in suspense, the appearance, contrary to the treaty, of a Roman squadron off the harbour decided the controversy. The Tarentines, indignant at the insult, attacked the hostile fleet, killed the admiral, and sunk most of the ships. Still Rome, relying probably on her partisans in the city, tried negotiation, and an alliance appeared likely after all, when suddenly, the help for which the Tarentine democrats had been looking appeared, and war with Rome was resolved upon (281-280).⁹

473-4. King Pyrrhus, whose timely appearance seemed for the moment to have saved the independence of Tarentum, was the most brilliant of the military adventurers whom the disturbed times following the death of Alexander the Great had brought into prominence. High-spirited, generous, and ambitious, he had formed the scheme of rivalling Alexander's achievements in the East, by winning for himself an empire in the West. He aspired not only to unite under his rule the Greek communities of Italy and Sicily, but to overthrow the great Phœnician state of Carthage—the natural enemy of Greeks in the West, as Persia had been in the East. Of Rome it is clear that he

knew little or nothing; the task of ridding the Greek seaports of their barbarian foes he no doubt regarded as an easy one; and the splendid force he brought with him was intended rather for the conquest of the West than for the preliminary work of chastising a few Italian tribes, or securing the submission of the unwarlike Italian Greeks. Pyrrhus's first measure was to place Tarentum under a strict military discipline; this done he advanced into Lucania to meet the Roman consul Lævinus. The battle which followed, on the banks of the Liris, ended in the complete defeat of the Roman troops, largely owing to the panic caused by the elephants which Pyrrhus had brought with him (280).¹ The Greek cities expelled their Roman garrisons and joined him, while numerous bands of Samnites, Lucanians, and Bruttians flocked to his standard. But, to the disappointment of his Greek and Italian allies, Pyrrhus showed no anxiety to follow up the advantage he had gained. His heart was set on Sicily and Africa, and his immediate object was to effect such an arrangement with Rome as would at once fulfil the pledges he had given to the Greeks by securing them against Roman interference and set himself free to seek his fortunes westward. But, though his favourite minister Cineas employed all his skill to win the ear of the senate, and, though Pyrrhus himself lent weight to his envoy's words by advancing as near Rome as Anagnia (279), nothing could shake the resolution of the senate, and Cineas brought back the reply that the Romans could not treat with Pyrrhus so long as he remained in arms upon Italian soil. Disappointed in his hopes of peace, Pyrrhus in the next year (278) turned his forces against the Roman strongholds in Apulia.² Once more, at Asculum, he routed the legions, but only to find that the indomitable resolution of the enemy was strengthened by defeat. Weary of a struggle which threatened indefinitely to postpone the fulfilment of his dreams of empire, Pyrrhus resolved to quit Italy, and, leaving garrisons in the Greek towns, crossed into Sicily. Here his success at first was such as promised the speedy realization of his hopes. The Sicilian Greeks hailed him as a deliverer; the Carthaginians were driven back to the extreme west of the island, and Eryx and Panormus fell into his hands. But at this point fortune deserted him. His efforts to take Lilybæum were fruitless; the Carthaginians recovered their courage, while the unstable Greeks, easily daunted by the first threatenings of failure, and impatient of the burdens of war, broke out into open murmurs against him. Soured and disappointed, Pyrrhus returned to Italy (276) to find the Roman legions steadily moving southwards, and his Italian allies disgusted by his desertion of their cause. One of the consuls for the year (275), M. Curius Dentatus, the conqueror of Samnium, was encamped at Beneventum awaiting the arrival of his colleague. Here Pyrrhus attacked him, and the closing battle of the war was fought. It ended in the complete victory of the Romans. Pyrrhus, unable any longer to face his opponents in the field, and disappointed of all assistance from his allies, retreated in disgust to Tarentum and thence crossed into Greece.³

A few years later (272) Tarentum was surrendered to Rome by its Epirot garrison; it was granted a treaty of alliance, but its walls were razed and its fleet handed over to Rome. In 270 Rhegium also entered the ranks of Roman allies, and finally in 269 a single campaign crushed the last efforts at resistance in Samnium. Rome was now at leisure to consolidate the position she had won. Between 273 and 263 three new colonies were founded in Samnium and Lucania—Pæstum in 273, Beneventum in

268, Æsernia in 263. In central Italy the area of Roman territory was increased by the full enfranchisement (268) of the Sabines,⁴ and of their neighbours to the east, the Picentes. To guard the Adriatic coast colonies were established at Ariminum (268), at Firmum, and at Castrum Novum (264), while to the already numerous maritime colonies was added that of Cosa in Etruria.⁵

Rome was now the undisputed mistress of Italy. The limits of her supremacy to the north were represented roughly by a line drawn across the peninsula from the mouth of the Arno on the west to that of the Æsis on the east.⁶ Beyond this line lay the Ligurians and the Celts; all south of it was now united as "Italy" under the rule of Rome.

But the rule of Rome over Italy, like her wider rule over the Mediterranean coasts, was not an absolute dominion over conquered subjects. It was in form at least a confederacy under Roman protection and guidance; and the Italians, like the provincials, were not the subjects, but the "allies and friends" of the Roman people.⁷ Marvellous as are the perseverance and skill with which Rome built up, consolidated, and directed this confederacy, it is yet clear that both her success in forming it and its stability when formed were due in part to other causes than Roman valour and policy. The disunion which, in former times, had so often weakened the Italians in their struggles with Rome still told in her favour, and rendered the danger of a combined revolt against her authority remote in the extreme. In some cases, and especially in the city states of Etruria, Campania, and Magna Græcia, where the antagonism of the two political parties, aristocrats and democrats, was keen, Rome found natural and valuable allies in the former. Among the more backward peoples of central Italy, the looseness of their political organization not only lessened their power of resistance, but enabled Rome either to detach tribe after tribe from the confederacy or to attack and crush them singly. Elsewhere she was aided by ancient feuds, such as those between Samnites and Apulians, or Tarentines and Iapygians, or by the imminent dread of a foe—Celt, or Samnite, or Lucanian—whom Roman aid alone could repel. And, while combination against her was thus rendered difficult, if not impossible, by internal dissensions, feuds, differences of interest, of race, of language, and habits, Rome herself, from her position in the centre of Italy, was so placed as to be able to strike promptly, on the first signs of concerted opposition. All these advantages Rome utilized to the utmost. We have no means of deciding how far she applied elsewhere the principle upon which she acted in northern Etruria and Campania, of attaching the aristocratic party in a community to Roman interests, by the grant of special privileges; but it is certain that she endeavoured by every means in her power to perpetuate, and even to increase, the disunion which she had found so useful among her allies. In every possible way she strove to isolate them from each other, while binding them closely to herself. The old federal groups were in most cases broken up, and each of the members united with Rome by a special treaty of alliance. In Etruria, Latium, Campania, and Magna Græcia the city state was taken as the unit; in central Italy, where urban life was non-existent, the unit was the tribe. The northern Sabellian peoples, for instance,—the Marsi, Pæligni, Vestini, Marrucini, Frentani,—were now

⁴ Vell. Pat., i. 14, "suffragii ferendi jus Sabinis datum."

Rome as the mistress of Italy.

The
Latins.

constituted as separate communities in alliance with Rome. In many cases, too, no freedom of trade or intermarriage was allowed between the allies themselves, a policy afterwards systematically pursued in the provinces. Nor were all these numerous allied communities placed on the same footing as regarded their relations with Rome herself. To begin with, a sharp distinction was drawn between the "Latini" and the general mass of Italian allies. The "Latins" of this period had little more than the name in common with the old thirty Latin peoples of the days of Spurius Cassius. With a few exceptions, such as Tibur and Præneste, the latter had either disappeared or had been incorporated with the Roman state, and the Latins of 268 B.C. were almost exclusively the "Latin colonies," that is to say, communities founded by Rome, composed of men of Roman blood, and whose only claim to the title "Latin" lay in the fact that Rome granted to them some portion of the rights and privileges formerly enjoyed by the old Latin cities under the Cassian treaty.¹ Though nominally allies, they were in fact offshoots of Rome herself, bound to her by community of race, language, and interest, and planted as Roman garrisons among alien and conquered peoples. The Roman citizen who joined a Latin colony lost his citizenship,—to have allowed him to retain it would no doubt have been regarded as enlarging too rapidly the limits of the citizen body; but he received in exchange the status of a favoured ally. The Latin colony did not indeed enjoy the equality and independence originally possessed by the old Latin cities. It had no freedom of action outside its own territory, could not make war or peace, and was bound to have the same friends and foes as Rome. But its members had the right of commercium and down to 268² of connubium also with Roman citizens. Provided they left sons and property to represent them at home, they were free to migrate to Rome and acquire the Roman franchise. In war time they not only shared in the booty, but claimed a portion of any land confiscated by Rome and declared "public." These privileges, coupled with their close natural affinities with Rome, successfully secured the fidelity of the Latin colonies, which became not only the most efficient props of Roman supremacy, but powerful agents in the work of Romanizing Italy. Below the privileged Latins stood the Italian allies; and here again we know generally that there were considerable differences of status, determined in each case by the terms of their respective treaties with Rome. We are told that the Greek cities of Neapolis and Heraclea were among the most favoured;³ the Bruttii, on the other hand, seem, even before the Hannibalic war, to have been less generously treated. But beyond this the absence of all detailed information does not enable us to go.

486.

The
Italian
allies.

Rome, however, did not rely only on this policy of isolation. Her allies were attached as closely to herself as they were clearly separated from each other, and from the first she took every security for the maintenance of her own paramount authority. Within its own borders, each ally was left to manage its own affairs as an independent state.⁴ The badges which marked subjection to Rome in the provinces—the resident magistrate and the tribute—were unknown in Italy. But in all points affecting the relations of one ally with another, in all questions of the general

interests of Italy and of foreign policy, the decision rested solely with Rome. The place of a federal constitution, of a federal council, of federal officers, was filled by the Roman senate, assembly, and magistrates. The maintenance of peace and order in Italy, the defence of the coasts and frontiers, the making of war or peace with foreign powers, were matters the settlement of which Rome kept entirely in her own hands. Each allied state, in time of war, was called upon for a certain contingent of men, but, though its contingent usually formed a distinct corps under officers of its own, its numerical strength was fixed by Rome, it was brigaded with the Roman legions, and was under the orders of the Roman consul.⁵

This paramount authority of Rome throughout the peninsula was confirmed and justified by the fact that Rome herself was now infinitely more powerful than any one of her numerous allies. Her territory, as distinct from that of the allied states, covered something like one-third of the peninsula south of the Æsis. Along the west coast it stretched from Cære to the southern borders of Campania. Inland, it included the former territories of the Æqui and Hernici, the Sabine country, and even extended eastward into Picenum, while beyond these limits were outlying districts, such as the lands of the Senonian Celts, with the Roman colony of Sena, and others elsewhere in Italy, which had been confiscated by Rome and given over to Roman settlers. Since the first important annexation of territory after the capture of Veii (396), twelve new tribes had been formed,⁶ 353. and the number of male citizens registered at the census had risen from 152,000 to 290,000.⁷ Within this enlarged Roman state were now included numerous communities with local institutions and government. At their head stood the Roman colonies ("coloniae civium Romanorum"), founded to guard especially the coasts of Latium and Campania.⁸ Next to these eldest children of Rome came those communities which had been invested with the full Roman franchise, such, for instance, as the old Latin towns of Aricia, Lanuvium, Tusculum, Nomentum, and Pedum. Lowest in the scale were those which had not been considered ripe for the full franchise, but had, like Cære, received instead the "civitas sine suffragio," the civil without the political rights.⁹ Their members, though Roman citizens, were not enrolled in the tribes, and in time of war served not in the ranks of the Roman legions but in separate contingents. In addition to these organized town communities, there were also the groups of Roman settlers on the public lands, and the dwellers in the village communities of the enfranchised highland districts in central Italy.

The
Roman
state.Colonies
and
muni-
cipia.

The administrative needs of this enlarged Rome were obviously such as could not be adequately satisfied by the system which had done well enough for a small city state with a few square miles of territory. The old centralization of all government in Rome itself had become an impossibility, and the Roman statesmen did their best to meet the altered requirements of the time. The urban communities within the Roman pale, colonies and muni-

¹ For the "coloniae Latinae" founded before the First Punic War, see Beloch, 136 sq.

² The year of the foundation of Ariminum, the first Latin colony with the restricted rights; Cic. *Pro Caec.*, 35; Mommsen, *R. G.*, i. 421, note; Marquardt, *Staatsverw.*, i. 53. Beloch, 155–158, takes a different view.

³ Beloch, *Camp.*, 39; Cic. *Pro Balbo*, 22.

⁸ Ostia, Antium, Tarracina, Minturnæ, Sinuessa, and, on the Adriatic, Sena and Castrum Novum.

⁹ To both these classes the term "municipia" was applied.

cipia, were allowed a large measure of local self-government. In all we find local assemblies, senates, and magistrates, to whose hands the ordinary routine of local administration was confided, and, in spite of differences in detail, e.g., in the titles and numbers of the magistrates, the same type of constitution prevailed throughout.¹ But these local authorities were carefully subordinated to the higher powers in Rome. The local constitution could be modified or revoked by the Roman senate and assembly, and the local magistrates, no less than the ordinary members of the community, were subject to the paramount authority of the Roman consuls, prætors, and censors. In particular, care was taken to keep the administration of justice well under central control. The Roman citizen in a colony or municipium enjoyed of course the right of appeal to the Roman people in a capital case. We may also assume that from the first some limit was placed to the jurisdiction of the local magistrate, and that cases falling outside it came before the central authorities. But an additional safeguard for the equitable and uniform administration of Roman law, in communities to many of which the Roman code was new and unfamiliar, was provided by the institution of prefects ("præfecti iuridundo"),² who were sent out annually, as representatives of the Roman prætor, to administer justice in the colonies and municipia. To prefects was, moreover, assigned the charge of those districts within the Roman pale where no urban communities, and consequently no organized local government, existed. In these two institutions, that of municipal government and that of prefectures, we have already two of the cardinal points of the later imperial system of government.

Prefects.

The military system.

A word must lastly be said of the changes which the altered position and increased responsibilities of Rome had effected in her military system.³ For the most part these changes tended gradually to weaken the old and intimate connexion between the Roman army in the field and the Roman people at home, and thus prepared the way for that complete breach between the two which in the end proved fatal to the republic. It is true that service in the legion was still the first duty and the highest privilege of the fully qualified citizen. Every "assiduus" was still liable to active military service between the ages of seventeen to forty-five, and "proletarii" and freedmen were still called out only in great emergencies,⁴ and then but rarely enrolled in the legions. But this service was gradually altering in character. Though new legions were still raised each year for the summer campaigns, this was by no means always accompanied, as formerly, by the disbandment of those already on foot, and this increase in the length of time during which the citizen was kept with the standards had, as early as the siege of Veii, necessitated a further deviation from the old theory of military service—the introduction of pay.⁵ Hardly less important than these changes were those which had taken place in the organization of the legion itself. In the early days of the republic the same divisions served for the soldier in the legion and the citizen in the assembly. The Roman army in the field, and the Roman people in the comitia on the Campus, were alike grouped according to their wealth, in classes and centuriæ. But by the time of the Latin war the arrangement of the legion had been wholly altered. In

the new manipular system, with its three lines, no regard was paid to civic distinctions, but only to length of service and military efficiency, while at the same time the more open order of fighting which it involved demanded of each soldier greater skill, and therefore a more thorough training in arms than the old phalanx. One other change resulted from the new military necessities of the time, consulate. The pro- which was as fruitful of results as the incipient separation between the citizen and the soldier. The citizen soldiers of early Rome were commanded in the field by the men whom they had chosen to be their chief magistrates at home, and still, except when a dictator was appointed, the chief command of the legions rested with the consuls of the year. But, as Rome's military operations increased in area and in distance from Rome, a larger staff became necessary, and the inconvenience of summoning home a consul in the field from an unfinished campaign became intolerable. The remedy found, that of prolonging for a further period the imperium of the consul, was first applied in 327 B.C. in the case of Q. Publilius Philo,⁶ and between 327 and 264 instances of this "prorogatio imperii" 427-490. became increasingly common. This proconsular authority, originally an occasional and subordinate one, was destined to become first of all the strongest force in the republic, and ultimately the chief prop of the power of the Cæsars. Already, within the limits of Italy, Rome had laid the foundation stones of the system by which she afterwards governed the world,—the municipal constitutions, the allied states, the proconsuls, and the prefects.

PERIOD II: ROME AND THE MEDITERRANEAN STATES, 265-146 B.C.—(a) *Conquest of the West*.—Though marked 489-608. out by her geographical position as the natural centre of the Mediterranean, Italy had hitherto played no active part in Mediterranean politics, but, now that she was for the first time united, it was felt throughout the Mediterranean world that a new power had arisen, and Rome, as the head and representative of Italy, found herself irresistibly drawn into the vortex of Mediterranean affairs. With those of the eastern Mediterranean indeed she was not immediately called upon to concern herself. Her repulse of Pyrrhus, and the news that the Greek cities of South Italy had acknowledged her suzerainty, had, it is true, suddenly revealed to the Eastern world the existence of a powerful Italian state. Egypt sought her alliance, and Greek scholars began to interest themselves keenly in the history, constitution, and character of the Latin republic which had so suddenly become famous. But this was all, and not until fifty years after the retreat of Pyrrhus did Rome seriously turn her attention eastward. Westward of Italy the case was different. The western coasts of the peninsula were the most fertile and populous and wealthy, and it was westward rather than eastward that the natural openings for Italian commerce were to be found. But it was precisely on this side that Rome had serious ground for anxiety. Carthage was now at the height of her power. Her outposts were threateningly near to Italy in Sardinia and in Sicily, while her fleets swept the seas and jealously guarded for the benefit of Carthage alone the hidden treasures of the West. In the east of Sicily, Syracuse still upheld the cause of Greek independence against the hereditary foe of the Greek race; but Syracuse stood alone, and her resources were comparatively small. What Rome had to fear was the establishment, and that at no distant date, of an absolute Carthaginian domination over the Western seas—a domination which would not only be fatal to Italian commerce but would be a standing menace to the safety of the Italian coasts. Rome had indeed long been

¹ For details, see Beloch, *Ital. Bund.*, caps. v., vi., vii. The enfranchised communities in most cases retained the old titles for their magistrates, and hence the variety in their designations.

⁶ Livy, viii. 23, "ut pro consule rem gereret quoad debellatum esset."

connected with Carthage by treaty, and the older purely commercial treaties had quite recently been replaced by a close alliance formed in face of the common danger to which both had been exposed by the adventurous schemes of Pyrrhus. But this danger was past, and it is probable that others besides Pyrrhus foresaw that on the old battleground of Greeks and Phœnicians a struggle must soon be fought out between the Phœnician mistress of the Italian seas and the rulers of the Italian peninsula.

First
Punic
War,
265-241 =
489-513.

489.

It was above all things essential for Rome that the Carthaginians should advance no farther eastward. But already in 272 Tarentum had almost fallen into their grasp, and seven years later Rome was threatened with a danger at least as serious, the establishment of Carthaginian rule in the east of Sicily, and within sight of the Italian coast. In 265 a body of Campanian mercenaries, who had seized Messana, found themselves hard pressed by Hiero, king of Syracuse. One party among them appealed for aid to Carthage. The Carthaginians readily responded, and a Carthaginian garrison occupied the citadel of Messana. But at Messana, as once at Tarentum, there were others who turned to Rome, and, as Italians themselves, implored the aid of the great Italian republic, offering in return to place Messana under the suzerainty of Rome. The request was a perplexing one. Both Hiero and the Carthaginians were allies of Rome, and Messana, if rescued from the latter, belonged of right to Hiero and not to Rome. Apart, too, from treaty obligations, the Roman senate naturally hesitated before acceding to an appeal which would precipitate a collision with Carthage, and commit Rome to a new and hazardous career of enterprise beyond the sea. Finally, however, all other considerations gave way before the paramount importance of checking the advance of Carthage.

490.

The Roman assembly voted that assistance should be sent to the Mamertines, and in 264 the Roman legions for the first time crossed the sea. Messana was occupied, and, after sustaining a defeat, the Carthaginians and Syracusans were forced to raise the siege and withdraw. The opening years of the war which was thus begun gave little promise of the length of the struggle, and it seemed likely at the outset that Rome's immediate object, the expulsion of the Carthaginians from Sicily, would be soon attained.

491.

The accession to the Roman side of King Hiero (263) not only confirmed the position which Rome had already assumed in Italy of the champion of the western Greeks against barbarians, but provided her in eastern Sicily with a convenient base of operations and commodious winter quarters, and in Hiero himself with a loyal and effective ally. In the next year (262) followed the capture of Agrigentum, and in 261 the Roman senate resolved on supplementing these successes on land by the formation of a fleet which should not only enable them to attack the maritime strongholds which defied the assaults of their legions, and protect their own coasts, but even to carry the war into Africa itself. In the spring of 260 the first regular Roman fleet, consisting of one hundred quinqueremes and twenty triremes set sail;¹ and the brilliant naval victory off Mylæ, won by the consul C. Duilius in the same year, seemed to promise the Romans as much success by sea as they had won by land. But the promise was not fulfilled;

494.

and in 256 the senate, impatient of the slow progress made in Sicily, determined on boldly invading Africa. It was a policy for which, if Africa were once reached, the defenceless state of the Carthaginian territories, the doubtful loyalty of her Libyan subjects, and the unwarlike habits of her own citizens, gave every hope of success, and, but for the blunders of the Romans themselves, it might have succeeded now as it did fifty years later. The

498.

passage to Africa was opened by the defeat of the Carthaginian fleet off Ecnomus; the two consuls, L. Manlius Vulso and M. Atilius Regulus, landed in safety and rapidly overran the country. But these successes led the senate, at the close of the summer, into committing the serious blunder of recalling one of the consuls, Manlius, with a large portion of the troops. It was one of many instances in which the rules and traditions of the old republican system proved themselves inconsistent with the new requirements of an extended warfare. The consul came back to hold the elections; his soldiers returned, as the custom had been, to their homes after a summer's campaign; but the efficiency of the expedition was fatally impaired. The rashness and over-confidence of Regulus aggravated the effects of the senate's action. Emboldened by further successes, and notwithstanding his diminished forces, he met the Carthaginian proposals for peace by terms so harsh that the latter, though the Romans were almost at their gates, their soldiers disheartened, and the nomad tribes swarming on their frontiers, indignantly broke off the negotiations and prepared to resist to the last. At this crisis, so the story runs, the arrival of Xanthippus, a Spartan soldier of fortune, changed the face of affairs, as that of Gylippus had formerly done at Syracuse. His superior military skill remedied the blunders of the Carthaginian generals; confidence was restored; and in 255 he triumphantly routed the Roman forces a few 499. miles outside the city. Regulus was taken prisoner,² and only a miserable remnant of two thousand men escaped to the Roman camp on the coast. Here they were rescued by a Roman fleet, but their ill-fortune pursued them. On its way home the fleet was wrecked, and all but 80 vessels out of a total of 364 were lost.

Still, though abandoning all thoughts of invading Africa, the Romans were unwilling to renounce all thoughts of facing their enemy on the sea. But fresh disasters followed. The hopes raised (254) by the capture of 500. Panormus were dashed to the ground the next year (253) 501. by the total destruction in a storm of the victorious fleet on its way home from Panormus to Rome. Four years later a second fleet, despatched under P. Claudius to assist in the blockade of Lilybæum, was completely defeated off Drepana, while, to make matters worse, his colleague L. Junius, who had been hastily sent out with reinforcements, was wrecked near the dangerous promontory of Pachynus.

Disheartened by these repeated disasters, the senate resolved to trust only to the legions, and by sheer force of perseverance slowly to force the enemy out of the few positions to which he still clung in Sicily. But, though for five years (248-243) no fresh naval operations were 506-511. attempted, no compensating success by land followed. Hamilcar Barca, the new Carthaginian commander, not only ravaged with his fleet the coasts of Italy, but from his impregnable position at Ercte incessantly harassed the Roman troops in the west of the island, and even recaptured Eryx. Convinced once more of the impossibility of driving the Carthaginians out of Sicily as long as their navy swept the seas, the Romans determined on a final effort. The treasury was empty; but by the liberal contributions of private citizens a fleet was equipped, and C. Lutatius Catulus, consul for 242, started for Sicily early 512. in the summer of that year with 200 quinqueremes. From Drepana, whither he had gone to aid in the blockade, he sailed out to meet a Carthaginian fleet, despatched from Africa against him; and a battle took place at the Ægates islands, some 20 miles from the Sicilian coast, in which Catulus completely defeated his enemy. The end

¹ Mommsen, *R. G.*, i. 515.

² For criticisms of the story of Regulus, see Mommsen, i. 523; Ihne ii. 69; Ranke, *Weltgeschichte*, ii. 185. Cf. art. REGULUS.

of the long struggle had come at last. The Carthaginian government, despairing of being able to send further aid to their troops in Sicily, authorized Hamilcar to treat for peace. His proposals were accepted by Catulus, and the terms agreed upon between them were confirmed in all essential points by the commissioners sent out from Rome. The Carthaginians agreed to evacuate Sicily and the adjoining islands, to restore all prisoners, and to pay an indemnity of 2300 talents.

In its duration and its severity the First Punic War is justly ranked by Polybius above all other wars of his own and preceding times, though neither in the military talent displayed nor in the importance of its results can it be compared with the war that followed. It was distinguished by no military achievement comparable with Hannibal's invasion of Italy, and with the single exception of Hamilcar it produced no general of the calibre of Hannibal or Scipio. It was in fact a struggle in which both Rome and Carthage were serving an apprenticeship in a warfare the conditions of which were unfamiliar to both. The Roman legions were foes very unlike any against which the Carthaginian leaders had ever led their motley array of mercenaries, while Rome was called upon for the first time to fight a war across the sea, and to fight with ships against the greatest naval power of the age. The novelty of these conditions accounts for much of the vacillating and uncertain action observable on both sides, and their effect in this direction was increased by the evident doubts felt by both antagonists as to the lengths to which the quarrel should be pushed. It is possible that Hamilcar had already made up his mind that Rome must be attacked and crushed in Italy, but his government attempted nothing more than raids upon the coast. There are indications also that some in the Roman senate saw no end to the struggle but in the destruction of Carthage; yet an invasion of Africa was only once seriously attempted, and then only a halfhearted support was given to the expedition. But these peculiarities in the war served to bring out in the clearest relief the strength and the weakness of the two contending states. The chief dangers for Carthage lay obviously in the jealousy exhibited at home of her officers abroad, in the difficulty of controlling her mercenary troops, and in the ever-present possibility of disaffection among her subjects in Libya,— dangers which even the genius of Hannibal failed finally to surmount. Rome, on the other hand, was strong in the public spirit of her citizens, the fidelity of her allies, the valour and discipline of her legions. What she needed was a system which should make a better use of her splendid materials than one under which her plans were shaped from day to day by a divided senate, and executed by officers who were changed every year, and by soldiers most of whom returned home at the close of each summer's campaign.

The interval between the First and Second Punic Wars was employed by both Rome and Carthage in strengthening their respective positions. Of the islands lying off the coast of Italy, the most important, Sicily, had fallen to Rome as the prize of the recent war. The eastern end of the island was still left under the rule of King Hiero as the ally of Rome, but the larger western portion became directly subject to Rome, and a temporary arrangement seems to have been made for its government, either by one of the two prætors, or possibly by a quæstor.¹ Sardinia and Corsica had not been surrendered to Rome by the treaty of 241, but three years later (238), on the invitation of the Carthaginian mercenaries stationed in the islands, a Roman force occupied them; Carthage pro-

tested, but, on the Romans threatening war, she gave way, and Sardinia and Corsica were formally ceded to Rome, though it was some seven or eight years before all resistance on the part of the natives themselves was crushed. In 227, however, the senate considered matters ripe for 527. the establishment of a separate and settled government, not only in Sardinia and Corsica, but also in Sicily. In that year two additional prætors were elected; to one was assigned the charge of western Sicily, to the other that of Sardinia and Corsica,² and thus the first stones of the Roman provincial system were laid. Of at least equal importance for the security of the peninsula was the subjugation of the Celtic tribes in the valley of the Po. These, headed by the Boii and Insubres and assisted by levies from the Celts to the westward, had in 225 alarmed 529. the whole of Italy by invading Etruria and penetrating to Clusium, only three days' journey from Rome. Here, however, their courage seems to have failed them. They retreated northward along the Etruscan coast, until at Telamon their way was barred by the Roman legions, returning from Sardinia to the defence of Rome, while a second consular army hung upon their rear. Thus hemmed in, the Celts fought desperately, but were completely defeated and the flower of their tribesmen slain. The Romans followed up their success by invading the Celtic territory. The Boii were easily reduced to submission. The Insubres, north of the Po, resisted more obstinately, but by 222 the war was over, and all the 532. tribes in the rich Po valley acknowledged the supremacy of Rome. The conquered Celts were not enrolled among the Italian allies of Rome, but were treated as subjects beyond the frontier. Three colonies were founded to hold them in check—Placentia and Cremona in the territory of the Insubres, Mutina in that of the Boii; and the great northern road (Via Flaminia) was completed as far as the Celtic border at Ariminum.

On the Adriatic coast, where there was no Carthage to be feared, and no important adjacent islands to be annexed, the immediate interests of Rome were limited to rendering the sea safe for Italian trade. It was with this object that, in 229, the first Roman expedition crossed the 525. Adriatic, and inflicted severe chastisement on the Illyrian pirates of the opposite coast.³ But the results of the expedition did not end here, for it was the means of establishing for the first time direct political relations between Rome and the states of Greece proper, to many of which the suppression of piracy in the Adriatic was of as much importance as to Rome herself. Alliances were concluded with Corcyra, Epidamnus, and Apollonia; and embassies explaining the reasons which had brought Roman troops into Greece were sent to the Ætolians, the Achæans, and even to Athens and Corinth. Everywhere they were well received, and the admission of the Romans to the Isthmian games⁴ (228) formally acknowledged them as the natural 526. allies of the free Greek states against both barbarian tribes and foreign despots, a relationship which was destined to prove as useful to Rome in the East as it had already proved itself to be in the West.

While Rome was thus fortifying herself on all sides, Carthage had acquired a possession which promised to compensate her for the loss of Sicily, Sardinia, and Corsica. The genius of her greatest citizen and soldier, Hamilcar Barca, had appreciated the enormous value of the Spanish peninsula, and conceived the scheme of founding there a Carthaginian dominion which should not only add to the wealth of Carthage, but supply her with troops, and with a base of operations for that war of revenge with Rome on which his heart was set. The conquest of southern and eastern Spain, begun by Hamilcar (236–228), and carried 518–526.

526-533. on by his kinsman Hasdrubal (228-221), was completed by his son Hannibal, who, with all his father's genius, inherited also his father's hatred of Rome, and by 219 the authority of Carthage had been extended as far as the Ebro. Rome had not watched this rapid advance without anxiety, but, probably owing to her troubles with the Celts, she had contented herself with stipulating (226) that Carthage should not carry her arms beyond the Ebro, so as to threaten Rome's ancient ally, the Greek Massilia, and with securing the independence of the two nominally Greek communities, Emporiæ and Saguntum,¹ on the east coast.

535. But these precautions were of no avail against the resolute determination of Hannibal, with whom the conquest of Spain was only preliminary to an attack upon Italy, and who could not afford to leave behind him in Spain a state allied to Rome. In 219, therefore, disregarding the protests of a Roman embassy, he attacked and took Saguntum, an act which, as he had foreseen, rendered a rupture with Rome inevitable, while it set his own hands free for a further advance.

Second Punic War, 218-201 = 536-553. 536. A second war with Carthage was no unlooked-for event at Rome; but the senate seems to have confidently expected that it would be waged at a distance from Italy—in Africa and in Spain, where Saguntum would have given them a convenient point of support; and to this hope they clung even after Saguntum was lost. In 218, the first year of the war, one consul, P. Cornelius Scipio, was despatched to Spain, and the other, T. Sempronius Gracchus, to Sicily, and thence to Africa. But Hannibal's secrecy and promptitude baffled all their calculations. Leaving New Carthage early in 218, in the space of five months he crossed the Pyrenees, reached the Rhone just as Scipio arrived at Massilia on his way to Spain, passed the Alps in spite of endless difficulties and hardships, and startled Italy by descending into the plains of Cisalpine Gaul. In two battles on the Ticinus and the Trebia he defeated the forces hastily collected to bar his progress southwards; the Celtic tribes rallied to his standard; and at the beginning of the next year he prepared to realize the dream of his life and carry fire and sword into Italy itself. His own force numbered 26,000 men; the total available strength of Rome and her allies was estimated at over 700,000.² But Hannibal's hope lay in the possibility that by the rapidity of his movements he might be able to strike a decisive blow before Rome could mobilize her levies, or get her somewhat cumbrous military machinery into working order. From a first success he expected no less a result than the break up of the Roman confederacy, and the isolation of Rome herself, while it would also increase the readiness of his own government to render him effective support. His trust in himself and his army was not misplaced, for to the last he had the advantage over the Roman legions wherever he met them in person. Except, however, in South Italy, his brilliant victories and dashing marches brought him no allies, and it was his inability to shake the loyalty of northern and central Italy and of the Latin colonies everywhere, even more than the indomitable perseverance of Rome and the supineness of Carthage, which caused his ultimate failure.

537. In the spring of 217 Hannibal crossed the Apennines and marched southwards through the lowlands of eastern Etruria, the route taken before him by the Celtic hordes. In April he annihilated Flaminius and his army at the Trasimene Lake,³ and pushed on to Spolegium, only a few

days' march from Rome. But Rome was not yet his goal; from Spolegium, which had closed its gates against him, he moved rapidly eastward, ravaging the territories of Roman allies as he went, till he reached the Adriatic and the fertile lands of northern Apulia, where supplies and especially remounts for his Numidian cavalry⁴ were plentiful, and communication with Carthage easy, and where, moreover, he was well placed for testing the fidelity of the most recent and the least trustworthy of the Italian allies of Rome. A second victory here, on the scale of that at the Trasimene Lake, might be the signal for a general revolt against Roman rule. It was not, however, until the summer of the next year that his opportunity came. The patient tactics of Q. Fabius Cunctator had become unpopular at Rome; and the consuls of 216, L. 538. Æmilius Paulus and M. Terentius Varro, took the field in Apulia, at the head of a larger force than Rome had yet raised, and with orders to fight and crush the daring invader. The result realized for the moment Hannibal's highest hopes. The Roman army was annihilated at Cannæ; and South Italy, with the exception of the Latin colonies and the Greek cities on the coast, came over to his side. Nor did the Roman misfortunes end here. Philip of Macedon concluded an alliance with Hannibal (215), 539. and threatened an invasion of Italy. In the very next year Syracuse, no longer ruled by the faithful Hiero, revolted, and a Carthaginian force landed in Sicily; lastly, in 212 came the loss of the Greek cities on the south 542. coast. But the truth of Polybius's remark that the Romans are most to be feared when their danger is greatest was never better illustrated than by their conduct in the face of these accumulated disasters. Patiently and undauntedly they set themselves to regain the ground they had lost. Philip of Macedon was first of all forced to retire from the allied city of Apollonia which he had attacked (214), and 540. then effectually diverted from all thoughts of an attack on Italy, by the formation of a coalition against him in Greece itself (211); Syracuse was recaptured in 212, after a 543, 542. lengthy siege, and Roman authority re-established in Sicily. In Italy itself the Roman commanders took advantage of Hannibal's absence in the extreme south to reconquer northern Apulia; but their main efforts were directed to the recovery of Campania, and above all of Capua. The imminent danger of Capua, which he had named as the successor of Rome in the headship of Italy, recalled Hannibal from the south, where he was besieging a Roman garrison in the citadel of Tarentum. Failing to break through the lines which enclosed it, he resolved, as a last hope of diverting the Roman legions from the devoted city, to advance on Rome itself. But his march, deeply as it impressed the imagination of his contemporaries by its audacity and promptitude, was without result. Silently and rapidly he moved along the course of the Latin Way, through the heart of the territory of Rome, to within 3 miles of the city, and even rode up with his advanced guard to the Colline gate. Yet no ally joined him; no Roman force was recalled to face him; no proposals for peace reached his camp; and, overcome, it is said, by the unmoved confidence of his foe, he withdrew, as silently and rapidly as he had advanced, to his headquarters in the south. The fall of Capua followed inevitably (211),⁵ and 543. the Roman senate saw with relief the seat of war removed to Lucania and Bruttium, and a prospect opening of some relief from the exhausting exertions of the last five years. Their hopes were quickly dashed to the ground. The

⁵ Livy, xxvi. 16, 33, gives the sentence passed on Capua: "Ager omnis et tecta publica P. R. facta, habitari tantum tanquam urbem, corpus nullum civitatis esse." For the condition of Capua subsequently, see Cic., *L. Agr.*, i. 6; compare *C. I. L.*, 566 *sq.*

faithful Massiliots sent word that Hasdrubal, beaten in Spain, was marching to join Hannibal in Italy. The anxiety at Rome was intense, and every nerve was strained to prevent the junction of the two brothers. Equally great was the relief when the news arrived that the bold march of the consul Claudius had succeeded, and that Hasdrubal had been defeated and slain on the river Metaurus (207). The war in Italy was now virtually ended, for, though during four years more Hannibal stood at bay in a corner of Bruttium, he was powerless to prevent the restoration of Roman authority throughout the peninsula. Sicily was once more secure; and finally in 206, the year after the victory on the Metaurus, the successes of the young P. Scipio in Spain (211-206) were crowned by the complete expulsion of the Carthaginians from the peninsula. Nothing now remained to Carthage outside Africa but the ground on which Hannibal desperately held out, and popular opinion at Rome warmly supported Scipio when on his return from Spain he eagerly urged an immediate invasion of Africa. The senate hesitated. Many were jealous of Scipio's fame, and resented his scarcely concealed intention of appealing to the people, should the senate decline his proposals. Others, like the veteran Q. Fabius, thought the attempt hazardous, with exhausted resources, and while Hannibal was still on Italian soil. But Scipio gained the day. He was elected consul for 205, and given the province of Sicily, with permission to cross into Africa if he thought fit. Voluntary contributions of men, money, and supplies poured in to the support of the popular hero; and by the end of 205 Scipio had collected in Sicily a sufficient force for his purpose. In 204 he crossed to Africa, where he was welcomed by the Numidian prince Masinissa, whose friendship he had made in Spain. In 203 he twice defeated the Carthaginian forces, and a large party at Carthage were anxious to accept his offer of negotiations. But the advocates of resistance triumphed. Hannibal was recalled from Italy, and with him his brother Mago, who had made a last desperate attempt to create a diversion in Italy by landing in Liguria. Mago died on the voyage, but Hannibal returned to fight his last battle against Rome at Zama, where Scipio, who had been continued in command as proconsul for 202 by a special vote of the people, won a complete victory. The war was over. The Roman assembly gladly voted that the Carthaginian request for peace should be granted, and entrusted the settlement of the terms to its favourite Scipio and a commission of ten senators. Carthage was allowed to retain her own territory in Africa intact; but she undertook to wage no wars outside Africa, and none inside without the consent of Rome. She surrendered all her ships but ten triremes, her elephants, and all prisoners of war. Finally she agreed to pay an indemnity of 10,000 talents in fifty years. Masinissa was rewarded by an increase of territory, and was enrolled among the "allies and friends" of the Roman people.¹

The battle of Zama decided the fate of the West. The power of Carthage was broken, and her supremacy passed by the right of conquest to Rome. Henceforth Rome had no rival to fear westward of Italy, and it rested with herself to settle within what limits her supremacy should be confined, and what form it should take. The answer to both these questions was largely determined for her by circumstances. For the next fifty years Rome was too deeply involved in the affairs of the East to think of extending her rule far beyond the limits of the rich inheritance which had fallen to her by the defeat of Carthage; and it was not until 125 that she commenced a fresh career of conquest in the West by invading Transalpine Gaul. But within this area considerable advance was

made in the organization and consolidation of her rule. The rate of progress was indeed unequal. In the case of Sicily and Spain, the immediate establishment of a Roman government was imperatively necessary, if these possessions were not either to fall a prey to internal anarchy, or be recovered for Carthage by some second Hamilcar. Accordingly, we find that in Sicily the former dominions of Hiero were at once united with the western half of the island as a single province, under the rule of a Roman prætor (201),² and that in Spain, after nine years of a provisional government (206-197), two provinces were in 197³ definitely established, and each, like Sicily, assigned to one of the prætors for the year, two additional prætors being elected for the purpose. But here the resemblance between the two cases ends. From 201 down to the outbreak of the Slave War in 136 there was unbroken peace in Sicily, and its part in the history is limited to its important functions in supplying Rome with corn and in provisioning and clothing the Roman legions.⁴ It became every year a more integral part of Italy; and a large proportion even of the land itself passed gradually into the hands of enterprising Roman speculators. The governors of the two Spains had very different work to do from that which fell to the lot of the Sicilian prætors. Although the coast towns readily acquiesced in Roman rule, the restless and warlike tribes of the interior were in a constant state of ferment, which from time to time broke out into open revolt. In Sicily the ordinary prætorian authority, with at most a few cohorts, was sufficient, but the condition of Spain required that year after year the prætors should be armed with the consular authority, and backed by a standing force of four legions, while more than once the presence of the consuls themselves was found necessary. Still, in spite of all difficulties, the work of pacification proceeded. To the elder Cato (consul 195), and to Tiberius Sempronius Gracchus (prætor and proprætor 180-179), father of the two tribunes, is mainly due the credit of quieting the Celtiberian tribes of central Spain, and the government of Gracchus was followed by thirty years of comparative tranquillity. The insurrection headed by Viriathus in 149 was largely caused by the exactions of the Roman magistrates themselves, while its obstinate continuance down to the capture of Numantia in 133, was almost as much the result of the incapacity of the Roman commanders. But the re-settlement of the country by Scipio Africanus the younger in that year left all Spain, with the exception of the highland Astures and Cantabri in the north-west, finally and tranquilly subject to Rome. Meanwhile the disturbed state of the interior had not prevented the spread of Roman civilization on the seaboard. Roman traders and speculators flocked to the seaport towns and spread inland. The mines became centres of Roman industry; the Roman legionaries quartered in Spain year after year married Spanish wives, and when their service was over gladly settled down in Spain, in preference to returning to Italy. The first Roman communities established outside Italy were both planted in Spain, and both owed their existence to the Roman legions.⁵ Spain even in 133 gave promise of becoming in time "more Roman than Rome itself."

In Africa there was no question at first of the introduction of Roman government by the formation of a province. Carthage, bound hand and foot by the treaty of 201, was placed under the jealous watch of the loyal prince of Numidia.

¹ Livy, xxvi. 40. The union was apparently effected in 210; but the first prætor of all Sicily was sent there in 201.

midia, who himself willingly acknowledged the suzerainty of Rome. But it was impossible for this arrangement to be permanent. Every symptom of reviving prosperity at Carthage was regarded at Rome with feverish anxiety, and neither the expulsion of Hannibal in 195 nor his death in 183 did much to check the growing conviction that Rome would never be secure while her rival existed. It was therefore with grim satisfaction that many in the Roman senate watched the increasing irritation of the Carthaginians under the harassing raids and encroachments of their favoured neighbour Masinissa, and waited for the moment when Carthage should, by some breach of the conditions imposed upon her, supply Rome with a pretext for interference. At last in 151 came the news that Carthage, in defiance of treaty obligations, was actually at war with Masinissa. The anti-Carthaginian party in the senate, headed by M. Porcius Cato, eagerly seized the opportunity, and, in spite of the protests of Scipio Nasica and others, war was declared, and nothing short of the destruction of their city itself was demanded from the despairing Carthaginians. This demand, as the senate no doubt foresaw, was refused, and in 149 the siege of Carthage began. During the next two years little progress was made, but in 147 P. Cornelius Scipio Æmilianus, son of L. Æmilius Paulus, conqueror of Macedonia, and grandson by adoption of the conqueror of Hannibal was, at the age of thirty-seven, and though only a candidate for the ædileship, elected consul, and given the command in Africa. In the next year (146) Carthage was taken and razed to the ground. Its territory became the Roman province of Africa, while Numidia, now ruled by the three sons of Masinissa, remained as an allied state under Roman suzerainty, and served to protect the new province against the raids of the desert tribes. Within little more than a century from the commencement of the First Punic War, the whole of the former dominions of Carthage had been brought under the direct rule of Roman magistrates, and were regularly organized as Roman provinces.

Italy. In Italy itself the Hannibalic war was inevitably followed by important changes, and these changes were naturally enough in the direction of an increased Roman predominance. In the north the Celtic tribes paid for their sympathy with Hannibal with the final loss of all separate political existence. Cispadane Gaul, studded with colonies, and flooded with Roman settlers, was rapidly Romanized. Beyond the Po in Polybius's time, about sixty years after the Hannibalic war, Roman civilization was already widely spread. In the extreme north-east the Latin colony of Aquileia, the last of its kind, was founded in 181, to hold in check the Alpine tribes, while in the north-west the Ligurians, though not finally subdued until a later time, were held in check by the colony of Luna (180), and by the extensive settlements of Roman citizens and Latins made on Ligurian territory in 173.¹ In southern Italy the effects of the war were not less marked. The depression of the Greek cities on the coast, begun by the raids of the Sabellian tribes, was completed by the repeated blows inflicted upon them during the Hannibalic struggle. Some of them lost territory;² all suffered from a decline of population and loss of trade; and their place was taken by such new Roman settlements as Brundisium and Puteoli.³ In the interior the southern Sabellian tribes suffered scarcely less severely. The Bruttii were struck off the list of Roman allies, and nearly

all their territory was confiscated.⁴ To the Apulians and Lucanians no such hard measure was meted out; but their strength had been broken by the war, and their numbers dwindled; large tracts of land in their territories were seized by Rome, and allotted to Roman settlers, or occupied by Roman speculators. That Etruria also suffered from declining energy, a dwindling population, and the spread of large estates is clear from the state of things existing there in 133. It was indeed in central Italy, the home of the Latins and their nearest kinsmen, and in the new Latin and Roman settlements throughout the peninsula that progress and activity were henceforth concentrated, and even within this area the Roman, and not the strictly Latin, element tended to preponderate. Of the twenty colonies founded between 201 and 146 only four were Latin. 553-608.

(b) *Rome in the East, 200-133.*—Ever since the repulse of Pyrrhus from Italy, Rome had been slowly drifting into closer contact with the Eastern states. With one of the three great powers which had divided between them the empire of Alexander, with Egypt, she had formed an alliance in 273, and the alliance had been cemented by the growth of commercial intercourse between the two countries.⁵ In 228 her chastisement of the Illyrian pirates had led naturally enough to the establishment of friendly relations with some of the states of Greece proper. Further than this, however, Rome for the time showed no desire to go. The connexions already formed were sufficient to open the eastern ports to her trade, and the engrossing struggle with Carthage left her neither leisure nor strength for active interference in the incessant feuds and rivalries which had made up Eastern politics since the falling asunder of Alexander's empire. In 214 the alliance between Philip and Hannibal, and the former's threatened attack on Italy, forced her into war with Macedon, but even then she contented herself with heading a coalition of the Greek states against him, which effectually frustrated his designs against herself; and at the first opportunity (205) she ended the war by a peace which left the position unchanged. The results of the war were not only to draw closer the ties which bound Rome to the Greek states, but to inspire the senate with a genuine dread of Philip's restless ambition, and with a bitter resentment against him for his union with Hannibal. The events of the next four years served to deepen both these feelings. In 205 Philip entered into a compact with Antiochus of Syria for the partition between them of the dominions of Egypt, now left by the death of Ptolemy Philopator to the rule of a boy king. Antiochus was to take Coele-Syria and Phœnicia, while Philip claimed for his share the districts subject to Egypt on the coasts of the Ægean and the Greek islands. Philip no doubt hoped to be able to secure these unlawful acquisitions before the close of the Second Punic War should set Rome free to interfere with his plans. But the obstinate resistance offered by Attalus of Pergamum and the Rhodians upset his calculations. In 201 Rome made peace with Carthage, and the senate had leisure to listen to the urgent appeal for assistance which reached her from her Eastern allies. With Antiochus indeed the senate was not yet prepared to quarrel; Egypt was assured of the continued friendship of Rome, but Antiochus was allowed to work his will in Coele-Syria.⁷ With Philip it is clear that the senate had no thoughts of a peaceful settlement. Their animosity against him had been deepened by the assistance he had recently rendered to Carthage. Always an unsafe and turbulent

neighbour, he would, if allowed to become supreme in the Ægean, prove as dangerous to her interests in the East as Carthage had been in the West; nor, lastly, could Rome, in honour, look quietly on at the ill-treatment of states which, as Greeks and as allies of her own, had a double claim on her protection. To cripple or at least to stay the growth of Philip's power was in the eyes of the senate a necessity, but it was only by representing a Macedonian invasion of Italy as imminent that they persuaded the assembly, which was longing for peace, to pass a declaration of war¹ (200), an ostensible pretext for which was found in the invasion by Macedonian troops of the territory of Rome's ally, Athens.

554.

Second
Mace-
donian
War,
200-197 =
554-557.

The war commenced in the summer of 200 B.C., and, though the landing of the Roman legions in Epirus was not followed, as had been hoped, by any general rising against Philip, yet the latter had soon to discover that, if they were not enthusiastic for Rome, they were still less inclined actively to assist himself. Neither by force nor diplomacy could he make any progress south of Boeotia. The fleets of Pergamum and Rhodes, now the zealous allies of Rome, protected Attica and watched the eastern coasts. The Achæans and Nabis of Sparta were obstinately neutral, while nearer home in the north the Epirots and Ætolians threatened Thessaly and Macedonia. His own resources both in men and in money had been severely strained by his constant wars,² and the only ally who could have given him effective assistance, Antiochus, was fully occupied with the conquest of Coele-Syria. It is no wonder then that, in spite of his dashing generalship and high courage, he made but a brief stand. T. Quinctius Flaminius (consul 198), in his first year of command, defeated him on the Aous, drove him back to the pass of Tempe, and in the next year utterly routed him at Cynoscephalæ. Almost at the same moment the Achæans, who had now joined Rome, took Corinth, and the Rhodians defeated his troops in Caria.³ Further resistance was impossible; Philip submitted, and early the next year a Roman commission reached Greece with instructions to arrange terms of peace. These were such as effectually secured Rome's main object in the war, the removal of all danger to herself and her allies from Macedonian aggression.⁴ Philip was left in possession of his kingdom, but was degraded to the rank of a second-rate power, deprived of all possessions in Greece, Thrace, and Asia Minor, and forbidden, as Carthage had been in 201, to wage war without the consent of Rome, whose ally and friend he now became. Macedon thus weakened could no longer be formidable, but might yet be useful, not only as a barrier against Thracians and Celts,⁵ but as a check upon anti-Roman intrigues in Greece.

556.

553.

The
liberation
of Greece.

560.

The second point in the settlement now effected by Rome was the liberation of the Greeks. The "freedom of Greece" was proclaimed at the Isthmian games amid a scene of wild enthusiasm,⁶ which reached its height when two years later (194) Flaminius withdrew his troops even from the "three fetters of Greece"—Chalcis, Demetrias, and Corinth.⁷ There is no reason to doubt that, in acting thus, not only Flaminius himself, but the senate and people at home were influenced, partly at any rate, by feelings of genuine sympathy with the Greeks and reverence for their past. It is equally clear that no other course was open to them. For Rome to have annexed Greece, as she had annexed Sicily and Spain, would have been a flagrant violation of the pledges she had repeatedly given both before and during the war; the attempt would have excited the fiercest opposition,

and would probably have thrown the Asiatic as well as the European Greeks into the arms of Antiochus. But a friendly and independent Greece would be at once a check on Macedon, a barrier against aggression from the East, and a promising field for Roman commerce. Nor while liberating the Greeks did Rome abstain from such arrangements as seemed necessary to secure the predominance of her own influence. In the Peloponnese, for instance, the Achæans were rewarded by considerable accessions of territory; and it is possible that the Greek states, as allies of Rome, were expected to refrain from war upon each other without her consent. The failure of the policy, after all, was due to the impracticability of the Greeks, and the intensity of their civic and tribal feuds. To suppose as some have done that Rome intended it to fail is to attribute to the statesmen of the generation of Scipio and Flaminius even more than the cynicism of the time of L. Mummius.⁸

Antiochus III. of Syria, Philip's accomplice in the proposed partition of the dominions of their common rival, Egypt, returned from the conquest of Coele-Syria (198) to learn first of all that Philip was hard pressed by the Romans, and shortly afterwards that he had been decisively beaten at Cynoscephalæ. It was already too late to assist his former ally, but Antiochus resolved at any rate to lose no time in securing for himself the possessions of the Ptolemies in Asia Minor and in eastern Thrace, which Philip had claimed, and which Rome now pronounced free and independent. In 197-196 he overran Asia Minor and crossed into Thrace.⁹ But Antiochus was pleasure-loving, irresolute, and above all no general, and it was not until 192 that the urgent entreaties of the Ætolians, and the withdrawal of the Roman troops from Greece, nerved him to the decisive step of crossing the Ægean; and even then the force he took with him was so small as to show that he completely failed to appreciate the nature of the task before him.¹⁰ At Rome the prospect of a conflict with Antiochus excited great anxiety, and it was not until every resource of diplomacy had been exhausted that war was declared.¹¹ At a distance, indeed, Antiochus, the great king, the lord of all the forces of Asia, seemed an infinitely more formidable opponent than their better known neighbour Philip, and a war against the vaguely known powers of the East a far more serious matter than a campaign in Thessaly. War, however, was unavoidable, unless Rome was to desert her Greek allies, and allow Antiochus to advance unopposed to the coasts of the Adriatic. And the war had no sooner commenced than the real weakness which lay behind the magnificent pretensions of the "king of kings" was revealed.

Had Antiochus acted with energy when in 192 he landed in Greece, he might have won the day before the Roman legions appeared. As it was, in spite of the warnings of Hannibal,¹² who was now in his camp, and of the Ætolians, he frittered away valuable time between his pleasures at Chalcis and useless attacks on petty Thessalian towns. In 191 Glabrio landed at the head of an imposing force; and a single battle at Thermopylæ broke the courage of Antiochus, who hastily recrossed the sea to Ephesus, leaving his Ætolian allies to their fate. But Rome could not pause here. The safety of her faithful allies, the Pergamenes and Rhodians, and of the Greek cities in Asia Minor, as well as the necessity of chastising Antiochus, demanded an invasion of Asia. A Roman fleet

ment of
western
Asia.

had already (191) crossed the *Ægean*, and in concert with the fleets of Pergamum and Rhodes worsted the navy of Antiochus. In 190 the new consul L. Scipio, accompanied by his famous brother, the conqueror of Africa, led the Roman legions for the first time into Asia. At Magnesia, near Mount Sipylus in Lydia, he met and defeated the motley and ill-disciplined hosts of the great king.¹ For the first time the West, under Roman leadership, successfully encountered the forces of the East, and the struggle began which lasted far on into the days of the emperors. The terms of the peace which followed the victory at Magnesia tell their own story clearly enough. There is no question, any more than in Greece, of annexation; the main object in view is that of securing the predominance of Roman interests and influence throughout the peninsula of Asia Minor, and removing to a safe distance the only Eastern power which could be considered dangerous.² The line of the Halys and the Taurus range, the natural boundary of the peninsula eastward, was established as the boundary between Antiochus and the kingdoms, cities, and peoples now enrolled as the allies and friends of Rome. This line Antiochus was forbidden to cross; nor was he to send ships of war farther west than Cape Sarpedon in Cilicia. Immediately to the west of this frontier lay the small states of Bithynia and Paphlagonia and the immigrant Celtic Galatæ, and these frontier states, now the allies of Rome, served as a second line of defence against attacks from the east. The area lying between these "buffer states" and the *Ægean* was organized by Rome in such a way as should at once reward the fidelity of her allies and secure both her own paramount authority and safety from foreign attack. Pergamum and Rhodes were so strengthened—the former by the gift of the Chersonese, Lycæonia, Phrygia, Mysia, and Lydia, the latter by that of Lycia and Caria—as not only amply to reward their loyalty, but to constitute them effective props of Roman interests and effective barriers alike against Thracian and Celtic raids in the north and against aggression by Syria in the south. Lastly, the Greek cities on the coast, except those already tributary to Pergamum, were declared free, and established as independent allies of Rome.

554-565.

In a space of little over eleven years (200-189) Rome had broken the power of Alexander's successors and established throughout the eastern Mediterranean a Roman protectorate. It remained to be seen whether this protectorate could be maintained, or whether Rome would be driven to that policy of annexation which she had adopted from the first in Sicily and Spain.

Third
Mace-
donian
War,
171-168=
583-6.

It was in the western half of the protectorate in European Greece that the first steps in the direction of annexation were taken. The enthusiasm provoked by the liberation of the Greeks had died away, and its place had been taken by feelings of dissatisfied ambition or sullen resentment. Internecine feuds and economic distress had brought many parts of Greece to the verge of anarchy, and, above all, the very foundations of the settlement effected in 197 were threatened by the reviving power and aspirations of Macedon. Loyally as Philip had aided Rome in the war with Antiochus, the peace of Magnesia brought him nothing but fresh humiliation. He was forced to abandon all hopes of recovering Thessaly, and he had the mortification to see the hated king of Pergamum installed almost on his borders as master of the Thracian Chersonese. Resistance at the time was unavailing, but from 189 until his death (179) he laboured patiently and quietly to increase the internal resources of his own kingdom,³ and to foment, by dexterous intrigue, feelings of

565-575.

hostility to Rome among his Greek and barbarian neighbours. His successor, Perseus, his son by a left-handed alliance, continued his father's work. He made friends among the Illyrian and Thracian princes, connected himself by marriage with Antiochus IV. of Syria and with Prusias of Bithynia, and, among the Greek peoples, strove, not without success, to revive the memories of the past glories of Greece under the Macedonian leadership of the great Alexander.⁴ The senate could no longer hesitate. They were well aware of the restlessness and discontent in Greece; and after hearing from Eumenes of Pergamum, and from their own officers, all details of Perseus's intrigues and preparations they declared war.⁵ The struggle, in spite of Perseus's courage and the incapacity at the outset of the Roman commanders, was short and decisive. The sympathy of the Greeks with Perseus, which had been encouraged by the hitherto passive attitude assumed by Rome, instantly evaporated on the news that the Roman legions were on their way to Greece. No assistance came from Prusias or Antiochus, and Perseus's only allies were the Thracian king Cotys and the Illyrian Genthius. The victory gained by L. *Æmilius* Paulus at Pydna (168) ended the war.⁶ Perseus became the prisoner of Rome, and as such died in Italy a few years later.⁷ Rome had begun the war with the fixed resolution no longer of crippling but of destroying the Macedonian state. Perseus's repeated proposals for peace during the war had been rejected; and his defeat was followed by the final extinction of the kingdom of Philip and Alexander.⁸ Macedonia, though it ceased to exist as a single state, was not definitely constituted a Roman province.⁹ On the contrary, the mistake was made of introducing some of the main principles of the provincial system—taxation, disarmament, and the isolation of the separate communities—without the addition of the element most essential for the maintenance of order—that of a resident Roman governor. The four petty republics now created were each autonomous, and each separated from the rest by the prohibition of commercium and connubium, but no central controlling authority was substituted for that of the Macedonian king. The inevitable result was confusion and disorder, resulting finally (149-146) in the attempt of a pretender, Andriscus, who claimed to be a son of Perseus, to resuscitate the ancient monarchy.¹⁰ On his defeat in 146 the senate hesitated no longer, and Macedonia became a Roman province, with a Roman magistrate at its head.¹¹

605-8.
Mace-
donia a
Roman
province.

The results of the protectorate in Greece, if less dangerous to Roman supremacy, were quite as unfavourable to the maintenance of order. But from 189 to the defeat of Perseus in 167, no formal change of importance in the status of the Greek states was made by Rome. The senate, though forced year after year to listen to the mutual recriminations and complaints of rival communities and factions, contented itself as a rule with intervening just enough to remind the Greeks that their freedom was limited by its own paramount authority, and to prevent any single state or confederacy from raising itself too far above the level of general weakness which it was the interest of Rome to maintain. After the victory at Pydna, however, the sympathy shown for Perseus, exaggerated as it seems to have been by the interested representations of the Romanizing factions in the various states,

was made the pretext for a more emphatic assertion of Roman ascendancy. All those suspected of Macedonian leanings were removed to Italy, as hostages for the loyalty of their several communities,¹ and the real motive for the step was made clear by the exceptionally severe treatment of the Achæans, whose loyalty was not really doubtful, but whose growing power in the Peloponnese and growing independence of language had awakened alarm at Rome. A thousand of their leading men, among them the historian Polybius, were carried off to Italy (see POLYBIUS). In Ætolia the Romans connived at the massacre by their so-called friends of 500 of the opposite party. Acarnania was weakened by the loss of Leucas, while Athens was rewarded for her unambitious loyalty by the gift of Delos and Samos.

Settle-
ment of
Greece,
146-608.

But this somewhat violent experiment only answered for a time. In 148 the Achæans rashly persisted, in spite of warnings, in attempting to compel Sparta by force of arms to submit to the league. When threatened by Rome with the loss of all that they had gained since Cynoscephalæ, they madly rushed into war.² They were easily defeated, and a "commission of ten," under the presidency of L. Mummius, was appointed by the senate thoroughly to settle the affairs of Greece.³ Corinth, by orders of the senate, was burnt to the ground, and its territory confiscated. Thebes and Chalcis were destroyed, and the walls of all towns which had shared in the last desperate outbreak were razed to the ground. All the existing confederacies were dissolved; no "commercium" was allowed between one community and another. Everywhere an aristocratic type of constitution, according to the invariable Roman practice, was established, and the payment of a tribute imposed. Into Greece, as into Macedonia in 167, the now familiar features of the provincial system were introduced—disarmament, isolation, and taxation. The Greeks were still nominally free, and no separate province with a governor of its own⁴ was established, but the needed central control was provided by assigning to the neighbouring governor of Macedonia a general supervision over the affairs of Greece. From the Adriatic to the Ægean, and as far north as the river Drilo and Mount Scardus, the whole peninsula was now under direct Roman rule.⁵

The
Roman
protector-
ate in
Asia,
189-146=
565-608.

Beyond the Ægean the Roman protectorate worked no better than in Macedonia and Greece, and the demoralizing recriminations, quarrels, and disorders which flourished under its shadow were aggravated by its longer duration, and by the still more selfish view taken by Rome of the responsibilities connected with it.⁶ At one period indeed, after the battle of Pydna, it seemed as if the more vigorous, if harsh, system then initiated in Macedon and Greece was to be adopted farther east also. The leveling policy pursued towards Macedon and the Achæans was applied with less justice to Rome's two faithful and favoured allies, Rhodes and Pergamum. The former had rendered themselves obnoxious to Rome by their independent tone, and still more by their power and commercial prosperity. On a charge of complicity with Perseus they were threatened with war, and though this danger was averted⁷ they were forced to exchange their equal alliance with Rome for one which placed them in close

dependence upon her, and to resign the lucrative possessions in Lycia and Caria given them in 189. Finally, 565. their commercial prosperity was ruined by the establishment of a free port at Delos,⁸ and by the short-sighted acquiescence of Rome in the raids of the Cretan pirates. With Eumenes of Pergamum no other fault could be found than that he was strong and successful; but this was enough. His brother Attalus was invited, but in vain, to become his rival. His turbulent neighbours, the Galatæ, were encouraged to harass him by raids. Pamphylia was declared independent, and favours were heaped upon Prusias of Bithynia. These and other annoyances and humiliations had the desired effect. Eumenes and his two successors—his brother and son, Attalus II. and Attalus III.—contrived indeed by studious humility and dexterous flattery to retain their thrones, but Pergamum ceased to be a powerful state, and its weakness, added to that of Rhodes, increased the prevalent disorder in Asia Minor. During the same period we have other indications of a temporary activity on the part of Rome. The frontier of the protectorate was pushed forward to the confines of Armenia and to the upper Euphrates by alliances with the kings of Pontus and Cappadocia beyond the Halys. In Syria, on the death of Antiochus Epiphanes (164), Rome intervened to place a minor, Antiochus 590. Eupator, on the throne, under Roman guardianship.⁹ In 168 Egypt formally acknowledged the suzerainty of 586. Rome,¹⁰ and in 163 the senate, in the exercise of this new 591. authority, restored Ptolemy Philometor to his throne, but at the same time weakened his position by handing over Cyrene and Cyprus to his brother Euergetes.¹¹

But this display of energy was short-lived. From the death of Eumenes in 159 down to 133 Rome, secure 595-621. in the absence of any formidable power in the East, and busy with affairs in Macedonia, Africa, and Spain, relapsed into an inactivity the disastrous results of which revealed themselves in the next period, in the rise of Mithradates of Pontus, the spread of Cretan and Cilician piracy, and the advance of Parthia. To the next period also belongs the conversion, on the death of Attalus III., of the kingdom of Pergamum into the Roman province of Asia.

Both the western and eastern Mediterranean now acknowledged the suzerainty of Rome, but her relations with the two were from the first different. The West fell to her as the prize of victory over Carthage, and, the Carthaginian power broken, there was no hindrance to the immediate establishment in Sicily, Sardinia, Spain, and finally in Africa, of direct Roman rule. To the majority, moreover, of her Western subjects she brought a civilization as well as a government of a higher type than any before known to them. And so in the West she not only formed provinces but created a new and wider Roman world. To the east, on the contrary, she came as the liberator of the Greeks; and it was only slowly that in this part of the empire her provincial system made way. In the East, moreover, the older civilization she found there obstinately held its ground. Her proconsuls governed and her legions protected the Greek communities, but to the last the East remained in language, manners, and thought Greek and not Roman.

PERIOD III.: THE PERIOD OF THE REVOLUTION (146-49 608-705 B.C.).—In the course of little more than a century, Rome had become the supreme power in the civilized world. By all men, says Polybius, it was taken for granted that nothing remained but to obey the commands of the Romans.¹² For

the future the interest of Roman history centres in her attempts to perform the two Herculean tasks which this unique position laid upon her,—the efficient government of the subject peoples, and their defence against the barbarian races which swarmed around them on all sides. They were tasks under which the old republican constitution broke down, and which finally overtaxed the strength even of the marvellous organization framed and elaborated by Augustus and his successors.

At the outset the difficulties of Rome were increased by the rapidity with which her new duties came upon her. From a century, first of deadly struggle, and then of dazzlingly easy success, she emerged to find herself called upon to govern a world with the primitive machinery of a small city state, and to deal with new and complicated administrative problems which she had as yet had no leisure to study. Nor was it until her own political system had been remodelled that she was able to deal effectively with the government of the empire at large. During the period which has now to be considered, the period of the so-called Revolution, but little advance was made towards a better imperial organization, and that little was made by men who, like Cæsar and Pompey, belonged, both in the methods and aims of their policy and in the position they held, to the empire rather than to the republic.

Although in its outward form the old constitution had undergone little change during the age of war and conquest from 265 to 146,¹ the causes, both internal and external, which brought about its fall had been silently at work throughout. Its form was in strictness that of a moderate democracy. The patriciate had ceased to exist as a privileged caste,² and there was no longer any order of nobility recognized by the constitution. The senate and the offices of state were in law open to all,³ and the will of the people in their comitia had been in the most explicit and unqualified manner declared to be supreme alike in the election of magistrates, in the passing of laws, and in all matters touching the "caput" of a Roman citizen. But in practice the constitution had become an oligarchy. The senate, not the assembly, ruled Rome, and both the senate and the magistracies were in the hands of a class which, in defiance of the law, arrogated to itself the title and the privileges of a nobility.⁴ The ascendancy of the senate is too obvious and familiar a fact to need much illustration here. It is but rarely that the assembly was called upon to decide questions of policy, and then the proposal was usually made by the magistrate in obedience to the express directions of the senate.⁵ In the enormous majority of cases the matter was settled by a *senatus consultum*, without any reference to the people at all. The assembly decides for war or peace⁶, but the conduct of the war and the conditions of peace are matters left to the senate. Now and then the assembly confers a

command upon the man of its choice, or prolongs the imperium of a magistrate,⁷ but, as a rule, these and all questions connected with foreign affairs are settled within the walls of the senate house. It is the senate which year after year assigns the commands and fixes the number and disposition of the military forces,⁸ directs the organization of a new province,⁹ conducts negotiations, and forms alliances. Within Italy, though its control of affairs was less exclusive, we find that, besides supervising the ordinary current business of administration, the senate decides questions connected with the Italian allies, sends out colonies, allots lands, and directs the suppression of disorders. Lastly, both in Italy and abroad it managed the finances.¹⁰ Inseparably connected with this monopoly of affairs to the exclusion of the assembly was the control which in practice, if not in theory, the senate exercised over the magistrates. The latter had become what Cicero wrongly declares they were always meant to be, merely the subordinate ministers of the supreme council,¹¹ which assigned them their departments, provided them with the necessary equipment, claimed to direct their conduct, prolonged their commands, and rewarded them with triumphs. It was now at once the duty and the interest of a magistrate to be "in auctoritate senatus," "subject to the authority of the senate," and even the once formidable "tribuni plebis" are found during this period actively and loyally supporting the senate, and acting as its spokesmen in the assembly.¹²

The causes of this ascendancy of the senate are not to be found in any additions made by law to its constitutional prerogatives, but first of all in the fact that the senate was the only body capable of conducting affairs in an age of incessant war. The voters in the assembly, a numerous, widely scattered body, many of whom were always away with the legions abroad, could not readily be called together, and when assembled were very imperfectly qualified to decide momentous questions of military strategy and foreign policy. The senate, on the contrary, could be summoned in a moment,¹³ and included in its ranks all the skilled statesmen and soldiers of the commonwealth, while its forms of procedure were at least better fitted than those of the comitia for securing the careful discussion and prompt decision of the question before it. The subordination of the magistrates was equally the result of circumstances, though it suited the senatorial advocates of a later day to represent it as an original principle of the constitution, and though it was encouraged and confirmed by the policy of the senate itself.¹⁴ For, as the numbers of the magistrates, and also the area of government, increased, some central controlling power became absolutely necessary to prevent collisions between rival authorities, and to secure a proper division of labour, as well as to enforce the necessary concert and co-operation,¹⁵ nor could such a power be found anywhere in the republican system but in the senate, standing as it necessarily did in the closest relations with the magistrate, and composed as it was increasingly of men who were or had been in office.

Once more, behind both senate and magistrates lay the "nobles."

¹ The most important change was the assimilation of the division by classes and centuries with that by tribes, a change effected apparently by the censors in their revision of the register, and probably effected gradually. For a full discussion of the point, see Mommsen, *R. G.*, i. 818; Lange, *Röm. Alterth.*, ii. 463 (where the literature is given); Madvig, *Verf. d. Röm. Reichs*, i. 117. A second constitutional question was the franchise of the freedmen; see Nitzsch, *Die Gracchen*, 132 (Berlin, 1847).

² A few offices of a more or less priestly character were still filled only by patricians, e.g., rex sacrorum, flamen Dialis. A plebeian first became "curio maximus" in 209 (545 A.U.C.); Livy, xxvii. 8; see Mommsen, *Röm. Forsch.*, i. 77-127.

³ The "lectio senatus" was in the hands of the censors, but whether before Sulla's time their choice was subject to legal restrictions is doubtful. Cf. Cicero *Pro Sestio*, 65, "Deligerentur in id consilium ab universo populo."

⁴ Mommsen, *R. G.*, i. 781 sq.; Lange, *Röm. Alterth.*, ii.

⁵ "Ex auctoritate senatus." The lex Flaminia agraria of 232 was an exception, Cic. *De Senect.*, 4; Polyb., ii. 21.

⁶ Livy, xxxi. 5, xxxvii. 25, xxxvii. 55.

⁷ Livy, xxix. 40, xxx. 27, 41, xxxi. 50.

⁸ Livy, xxvi. 1, "consules de republica, de administratione belli, de provinciis exercitibusque patres consuluerunt."

⁹ Livy, xiv. 18.

¹⁰ Ihne, *R. G.*, iv. 43; Polyb., vi. 13.

¹² Livy, xxvii. 5, xxviii. 45.

¹³ Livy, xxii. 7; in 191 the senators were forbidden to leave Rome for more than a day. Nor were more than five to be absent at once; Livy, xxxvi. 3.

¹⁴ E.g., the abandonment of the dictatorship and the growing infrequency of re-election after the Second Punic War.

¹⁵ Livy, xxvii. 35; xxxv. 42, 43.

Constitutional changes, 265-146=489-608.

Ascendancy of the senate.

whole power and influence of the new nobility.¹ These "nobles" are essentially distinct from the older and more legitimate patrician aristocracy. Every patrician was of course noble, but the majority of the "noble families" in 146 were not patrician but plebeian.² The title had been gradually appropriated, since the opening of the magistracies, by those families whose members had held curule office, and had thereby acquired the "jus imaginum." It was thus in theory within the reach of any citizen who could win election even to the curule ædileship, and, moreover, it carried with it no legal privileges whatsoever. Gradually, however, the ennobled plebeian families drew together, and combined with the older patrician gentes to form a distinct order. Office brought wealth and prestige, and both wealth and prestige were liberally employed in securing for this select circle a monopoly of political power, and excluding new men.³ Already by the close of the period it is rare for any one but a noble to find his way into high office or into the senate. The senate and magistrates are the mouthpieces of this order, and are identified with it in policy and interest. Lastly, it must be allowed that both the senate and the nobility had to some extent justified their power by the use they made of it. It was their tenacity of purpose and devoted patriotism which had carried Rome through the dark days of the Hannibalic war. The heroes of the struggle with Carthage belonged to the leading families; the disasters at the Trasimene Lake and at Cannæ were associated with the blunders of popular favourites.

Weakness
of the
senatorial
govern-
ment.

From the first however, there was an inherent weakness in this senatorial government. It had no sound constitutional basis, and with the removal of its accidental supports it fell to the ground. Legally the senate had no positive authority. It could merely advise the magistrate when asked to do so, and its decrees were strictly only suggestions to the magistrate, which he was at liberty to accept or reject as he chose.⁴ It had it is true become customary for the magistrate not only to ask the senate's advice on all important points, but to follow it when given. But it was obvious that if this custom were weakened, and the magistrates chose to act independently, the senate was powerless. It might indeed anathematize⁵ the refractory official, or hamper him if it could by setting in motion against him a colleague or the tribunes, but it could do no more, and these measures, though as a rule effective in the case of magistrates stationed in Rome, failed just where the senate's control was most needed and most difficult to maintain—in its relations with the generals and governors of provinces abroad. The virtual independence of the proconsul was before 146 already exciting the jealousy of the senate and endangering its supremacy.⁶ Nor again had the senate any legal hold over the assembly. Except in certain specified cases, it rested with the magistrate to decide whether any question should be settled by a decree of the senate or a vote of the assembly.⁷ If he

¹ Mommsen, *R. G.*, i. 782 sq.

² *E.g.*, Livii, Sempronii, Cæcili, Licinii, &c.

³ Livy, xxii. 34, "plebeios nobiles . . . contemnere plebem, ex quo contemni a patribus desierint, coepisse"; cf. Sall., *Jug.*, 41, "paucorum arbitrio belli domique agitabatur penes eosdem aerarium, provinciae, magistratus." Mommsen, *R. G.*, i. 792, 793. The number of new families ennobled dwindles rapidly after 200 B.C.; Willems, *Le Sénat de la République Romaine*, i. 366 sq. (Paris, 1878).

⁴ The senators' whole duty is "sententiam dicere." The senator was asked "quid censes?" the assembly "quid velitis jubetis?" Cf. also the saving clause, "Si eis videretur" (sc. consilibus, &c.) in Seta., *e.g.*, Cic., *Phil.*, v. 19.

⁵ By declaring his action to be "contra rempublicam." The force of this anathema varied with circumstances. It had no legal value.

⁶ Livy, xxxviii. 42, of Cn. Manlius Vulso in Asia, 189 B.C.; cf. also the position of the two Scipios.

⁷ Hence the same things, *e.g.*, founding of colonies, are done in one

decided to make a proposal to the assembly, he was not bound except by custom to obtain the previous approval of the senate, and⁸ the constitution set no limits to the power of the assembly to decide any question whatsoever that was laid before it. The right of the people to govern was still valid, and though it had long lain dormant any year might see a magistrate in office resolved on recalling the people to a larger share in the conduct of affairs by consulting them rather than the senate, and an assembly bent on the exercise of its lawful prerogatives.

And from 167 at least, onwards, there were increasing indications that both the acquiescence of the people and the loyalty of the magistrates were failing. The absorbing excitement of the great wars had died away; the economic and social disturbance and distress which they produced were creating a growing feeling of discontent; and at the same time the senate provoked inquiries into its title to govern by its failure any longer to govern well. In the East there was growing confusion; in the West a single native chieftain defied the power which had crushed Carthage. At home the senate was becoming more and more simply an organ of the nobility, and the nobility were becoming every year more exclusive, more selfish, and less capable and unanimous.⁹

But if the senate was not to govern, the difficulty arose of finding an efficient substitute, and it was this difficulty that mainly determined the issue of the struggles which convulsed Rome from 133 to 49. As the event showed, neither the assembly nor the numerous and disorganized magistracy were equal to the work; the latter were gradually pushed aside in favour of a more centralized authority, and the former became only the means by which this new authority was first encouraged in opposition to the senate and finally established in a position of impregnable strength. The assembly which made Pompey and Cæsar found out too late that it could not unmake them.

It is possible that these constitutional and administrative difficulties would not have proved so rapidly fatal to the republic had not its very foundations been sapped by the changes which followed more or less directly on the conquest of the world. These changes can only be glanced at here. Civic equality and solidarity were alike destroyed by the concentration of wealth in a few hands, the disappearance of the small independent freeholder, and the growing numbers of freedmen and clients. The Roman community became not only unmanageably large, but hopelessly divided by class distinctions and interests, and wide differences in habits of life and modes of thought. The old traditions, beliefs, and usages inseparably connected with the republican regime, and essential to its continuance, lost ground daily before the incoming flood of new fashions, intellectual and social, from Greece and the East. Before the republic fell, Roman society was already in structure, temper, and mind thoroughly un-republican.

The first systematic attack upon the senatorial government is connected with the names of Tiberius and Gaius Gracchus, and its immediate occasion was an attempt to deal with no less a danger than the threatened disappearance of the class to which of all others Rome owed most

year by a Scetum., in another by a "lex"; cf. Cic. *De Rep.*, ii. 32; *Phil.*, i. 2, of Antony as consul, "mutata omnia, nihil per senatum, omnia per populum."

⁸ There was no legal necessity, before Sulla's time, for getting the "senatus auctoritas" for a proposal to the assembly.

⁹ See generally Mommsen, *R. G.*, i. bk. iii. cap. 6; Lange, *Röm. Alterth.*, vol. ii.; Ihne, v. cap. i. The first law against bribery at elections was passed in 181 B.C. (Livy, xl. 20), and against magisterial extortion in the provinces in 149 (Lex Calpurnia de pecuniis repetundis). The senators had special seats allotted to them in the theatre in 194 B.C.; Livy, xxxiv. 44, 54.

The Gracchi,

in the past.¹ For, while Rome had been extending her sway westward and eastward, while the treasury had been enriched, and while her nobles and merchants were amassing colossal fortunes abroad, the small freeholders throughout the greater part of Italy were sinking deeper into ruin under the pressure of accumulated difficulties. The Hannibalic war had laid waste their fields and thinned their numbers, and when peace returned to Italy it brought with it no revival of prosperity. The heavy burden of military service still pressed ruinously upon them,² and in addition they were called upon to compete with the foreign corn imported from beyond the sea,³ and with the foreign slave-labour purchased by the capital of wealthier men. Farming became unprofitable, and the hard laborious life with its scanty returns was thrown into still darker relief when compared with the stirring life of the camps with its opportunities of booty, or with the cheap provisions, frequent largesses, and gay spectacles to be had in the large towns. The small holders went off to follow the eagles or swell the proletariat of the cities, and their holdings were left to run waste or merged in the vineyards, oliveyards, and above all in the great cattle-farms, of the rich, and their own place was taken by slaves. The evil was not equally serious in all parts of Italy. It was least felt in the central highlands, in Campania, and in the newly settled fertile valley of the Po. It was worst in Etruria and in southern Italy; but everywhere it was serious enough to demand the earnest attention of Roman statesmen. Of its existence the government had received plenty of warning in the declining numbers of able-bodied males returned at the census,⁴ in the increasing difficulties of recruiting for the legions,⁵ in servile outbreaks in Etruria and Apulia,⁶ and

to the resumption by the state of as much of the Tiberius "common land" as was not held in occupation by authorized persons and conformably to the provisions of the Licinian law. Unauthorized occupiers were to be evicted; in other cases the occupation was reduced to a maximum size of 1000 acres;¹³ the public pastures were reclaimed for agriculture.¹⁴ And the land thus rescued for the community from the monopoly of a few was to be distributed in allotments.¹⁵ It was a scheme which could quote in its favour ancient precedent as well as urgent necessity. Of the causes which led to its ultimate failure something will be said later on; for the present we must turn to the constitutional conflict which it provoked. The senate from the first identified itself with the interests of the wealthy occupiers, and Tiberius found himself forced into a struggle with the senate, which had been no part of his original plan. He fell back on the legislative sovereignty of the assembly; he resuscitated the half-forgotten powers of interference vested in the tribunate in order to paralyse the action of the senatorial magistrates, and finally lost his life in an attempt to make good one of the weak points in the tribune's position by securing his own re-election for a second year. But the conflict did not end with his death. It was renewed on a wider scale, and with a more deliberate aim by his brother Gaius, who on his election to the tribunate (123) at once came forward as the avowed enemy of the senate. The latter suddenly found its control of the administration threatened at a variety of points. On the invitation of the popular tribune the assembly proceeded to restrict the senate's freedom of action in assigning the provinces.¹⁶ It regulated the taxation of the province of Asia¹⁷ and altered the conditions of military service.¹⁸ In home affairs it inflicted two serious blows on the senate's authority by declaring the summary punishment of Roman citizens by the consuls on the strength of a *senatus consultum* to be a violation of the law of appeal,¹⁹ and by taking out of the senate's hands the control of the newly established court for the trial of cases of magisterial misgovernment in the provinces.²⁰ Tiberius had committed the mistake of relying too exclusively on the support of one section only of the community; his brother endeavoured to enlist on the popular side every available ally. The Latins and Italians had opposed an agrarian scheme which took from them land which they had come to regard as rightfully theirs, and gave them no share in the benefit of the allotments.²¹ Gaius not only removed this latter grievance,²² but ardently supported and himself brought forward the first proposals made in Rome for their enfranchisement.²³

Ihne, v. 25; Marquardt, *Röm. Staatsverw.*, i. 437 sq.; Lange, *Röm. Alterth.*, iii. 8 sq.; Nitzsch, *Gracchen*, 294; Dureau de la Malle, *Écon. politique des Romains*, ii. 280.

²³ The *rogatio Fulvia*, 125 B.C.; *Val. Max.*, ix. 5, 1; App., *B. C.*, i. 21.

The indifference of the city populace, to whom the prospect of small holdings in a remote district of Italy was not a tempting one, was overcome by the establishment of regular monthly doles of corn at a low price.¹ Finally, the men of business—the publicans, merchants, and money-lenders—were conciliated by the privilege granted to them of collecting the tithes of the new province of Asia, and placed in direct rivalry with the senate by the substitution of men of their own class as judges in the “quaestio de repetundis,” in place of senators.² The organizer of this concerted attack upon the position of the senate fell, like his brother, in a riot.

Failure of the attempted agrarian reform. 636. 643.

The agrarian reforms of the two Gracchi had little permanent effect.³ Even in the lifetime of Gaius the clause in his brother's law rendering the new holdings inalienable was repealed, and the process of absorption recommenced.⁴ In 118 a stop was put to further allotment of occupied lands,⁵ and finally, in 111, the whole position of the agrarian question was altered by a law which converted all land still held in occupation into private land.⁶ The old controversy as to the proper use of the lands of the community was closed by this act of alienation. The controversy in future turns, not on the right of the poor citizens to the state lands, but on the expediency of purchasing other lands for distribution at the cost of the treasury.⁷

But, though the agrarian reform failed, the political conflict it had provoked ended only with the dictatorship of Cæsar, and the lines on which it was waged were in the main those laid down by Gaius Gracchus. The sovereignty of the assembly continued to be the watchword of the popular party, and a free use of the tribunician powers of interference and of legislation remained the most effective means of giving effect to their aims. At the same time the careers of both Tiberius and Gaius had illustrated the weak points of their position,—the uncertain temper and varying composition of the assembly, the limited tenure of office enjoyed by the tribunes⁸ and the possibility of disunion in their own body, and, lastly, the difficulty of keeping together the divergent interests which Gaius had for a moment united in hostility to the senate.

Marius, 118-100=636-654.

Ten years after the death of Gaius the populares once more summoned up courage to challenge the supremacy of the senate; and it is important as marking a step in advance that it was on a question not of domestic reform but of foreign administration that the conflict was renewed. The course of affairs in the client state of Numidia since Micipsa's death in 118 had been such as to discredit a stronger government than that of the senate.⁹ In open defiance of Roman authority, and relying on the influence of his own well-spent gold, Jugurtha had murdered both his legitimate rivals, Hiempsal and Adherbal, and made himself master of Numidia. The declaration of war

¹ Plut., *C. G.*, 5; App., i. 21; Livy, *Epit.*, lx.; Festus, 290.

² Hence Gaius ranked as the founder of the equestrian order. Plin., *N. H.*, xxxiii. 34, “judicium appellatione separare eum ordinem . . . instituisse Gracchi;” Varro ap. Non., 454, “bicipitem civitatem fecit.”

³ Traces of the work of the commission survive in the *Miliarium Popilianum*, *C. I. L.*, i. 551, in a few Gracchan “termini,” *ib.*, 552, 553, 554, 555, in the “*limites Gracchani*,” *Liber Colon.*, ed. Lachmann, pp. 209, 210, 211, 229, &c. Compare also the rise in the numbers of the census of 125 B.C.; Livy, *Epit.*, lx.

⁴ Lex Minucia, 121 B.C.; App., i. 27; Oros., v. 12; Festus, 201.

⁵ The so-called lex Thoria; App., i. 27; Cic. *Brut.*, 36; cf. Wordsworth, *Fragm.*, 441.

⁶ The “lex agraria,” still extant in a fragmentary condition in the museum at Naples. See Mommsen, *C. I. L.*, i. 200; Wordsworth, 441 sq.; Bruns, *Fontes Juris Rom.*, 54-67; App., i. 27.

⁷ Cic., *Lex Agr.*, ii. sect. 65.

⁸ Efforts were repeatedly made to get over this difficulty, e.g., the lex Papiria, 131 B.C.; Livy, *Epit.*, lix. Gaius was himself tribune for two years, 110-109 (cf. Sall., *Jug.*, 37, “tribuni continuare magistratum nitebantur”), and Saturninus in 100 B.C.

⁹ Sallust, *Jug.*, 5 sq.; Livy, *Epit.*, lxii., lxiv.

wrung from the senate (112) by popular indignation had 642. been followed by the corruption of a consul¹⁰ (111) and 643. the crushing defeat of the proconsul Albinus.¹¹ On the news of this crowning disgrace the storm burst, and on the proposal of the tribunes a commission of inquiry was appointed into the conduct of the war.¹² But the popular leaders did not stop here. Cæcilius Metellus, who as consul (109) had succeeded to the command in Numidia, was 645. an able soldier but a rigid aristocrat; and they now resolved to improve their success by entrusting the command instead to a genuine son of the people. Their choice fell on Gaius Marius (see MARIUS), an experienced officer and administrator, but a man of humble birth, wholly illiterate, and one who, though no politician, was by temperament and training a hater of the polished and effeminate nobles who filled the senate.¹³ He was triumphantly elected, and, in spite of a decree of the senate continuing Metellus as proconsul, he was entrusted by a vote of the assembly with the charge of the war against Jugurtha.¹⁴

Jugurtha was vanquished; and Marius, who had been a second time elected consul in his absence, arrived at Rome in January 104, bringing the captive prince with him in 650. chains.¹⁵ But further triumphs awaited the popular hero. The Cimbri and Teutones were at the gates of Italy; they had four times defeated the senatorial generals, and Marius was called upon to save Rome from a second invasion of the barbarians.¹⁶ After two years of suspense the victory at Aquæ Sextiæ (102), followed by that on the 652. Raudine plain (101), put an end to the danger by the 653. annihilation of the invading hordes; and Marius, now consul for the fifth time, returned to Rome in triumph. There the popular party welcomed him as a leader, and as one who would bring to their aid the imperium of the consul and all the prestige of a successful general. Once more, however, they were destined to a brief success followed by disastrous defeat. Marius became for the sixth time consul;¹⁷ of the two popular leaders Glaucia became prætor Saturninus and Saturninus tribune. But neither Marius nor his allies were statesmen of the stamp of the Gracchi; and the laws proposed by Saturninus had evidently no other serious aim in view than that of harassing the senate. His corn law merely reduced the price fixed in 123 for the 631. monthly dole of corn, and the main point of his agrarian law lay in the clause appended to it requiring all senators to swear to observe its provisions.¹⁸ The laws were carried; the senators with the exception of Metellus took the oath; but the triumph of the popular leaders was short-lived. Their recklessness and violence had alienated all classes in Rome; and their period of office was drawing to a close. At the elections fresh rioting took place, and at last Marius as consul was called upon by the senate to protect the state against his own partisans. In despair Saturninus and Glaucia surrendered, but while the senate was discussing their fate they were surrounded and murdered by the populace.

The popular party had been worsted once more in their struggle with the senate, but none the less their alliance with Marius, and the position in which their votes placed him, marked an epoch in the history of the revolution.

Military
reforms
of
Marius.

The six consulships of Marius represented not merely a party victory but a protest against the system of divided and rapidly-changing commands, which was no doubt the system favoured by the senate, but was also an integral element of the republican constitution, and in assailing it the populares weakened the republic even more than they irritated the senate. The transference of the political leadership to a consul who was nothing if not a soldier was at once a confession of the insufficiency of the purely civil authority of the tribunate and a dangerous encouragement of military interference in political controversies. The consequences were already foreshadowed by the special provisions made by Saturninus for Marius's veterans, and in the active part taken by them in the passing of his laws. Indirectly too Marius, though no politician, played an important part in this new departure. His military reforms¹ at once democratized the army and attached it more closely to its leader for the time being. He swept away the last traces of civil distinctions of rank or wealth within the legion, admitted to its ranks all classes, and substituted voluntary enlistment under a popular general for the old-fashioned compulsory levy. The efficiency of the legion was increased at the cost of a complete severance of the ties which bound it to the civil community and to the civil authorities.

The defeat of Saturninus was followed by several years of quiet; nor was the next important crisis provoked directly by any efforts of the discredited popular party. It was due partly to the rivalry which had been growing more bitter each year since 122 between the senate and the commercial class, and secondly to the long impending question of the enfranchisement of the Italian allies. The publicani, negotiatores, and others, who constituted what was now becoming known as the equestrian order, had made unscrupulous use of their control of the courts and especially of the "quaestio de repetundis" against their natural rivals, the official class in the provinces. The threat of prosecution before a hostile jury was held over the head of every governor, legate, and quaestor who ventured to interfere with their operations in the provinces. The average official preferred to connive at their exactions; the bolder ones paid with fines and even exile for their courage. In 93 the necessity for a reform was proved beyond a doubt by the scandalous condemnation of P. Rutilius Rufus,² ostensibly on a charge of extortion, in reality as the reward of his efforts to check the extortions of the Roman equites in Asia.

The need of reform was clear, but it was not so easy to carry a reform which would certainly be opposed by the whole strength of the equestrian order, and which, as involving the repeal of a Sempronian law, would arouse the resentment of the popular party. The difficulties of the Italian question were more serious. That the Italian allies were discontented was notorious. After nearly two centuries of close alliance, of common dangers and victories, they now eagerly coveted as a boon that complete amalgamation with Rome which they had at first resented as a dishonour. But, unfortunately, Rome had grown more selfishly exclusive in proportion as the value set upon Roman citizenship increased. The politic liberality with which the franchise had once been granted had disappeared. The allies found their burdens increasing and their ancient privileges diminishing, while the resentment with which they viewed their exclusion from the fruits of the conquests they had helped to make was aggravated by

the growingly suspicious and domineering attitude of the Roman government.³ During the last forty years feelings of hope and disappointment had rapidly succeeded each other; Marcus Fulvius, Gaius Gracchus, Saturninus, had all held out promises of relief—and nothing had yet been done. On each occasion they had crowded to Rome, full of eager expectation, only to be harshly ejected from the city by the consul's orders.⁴ The justice of their claims could hardly be denied, the danger of continuing to ignore them was obvious—yet the difficulties in the way of granting them were formidable in the extreme. The temper of senate and people alike was still jealously exclusive, and from a higher than a merely selfish point of view there was much to be said against the revolution involved in so sudden and enormous an enlargement of the citizen body.

Marcus Livius Drusus, who as tribune gallantly took up the task of reform, is claimed by Cicero⁵ as a member of that party of the centre to which he belonged himself. Noble, wealthy, and popular, he seems to have hoped to be able by the weight of his position and character to rescue the burning questions of the day from the grasp of extreme partisans and to settle them peacefully and equitably. But he, like Cicero after him, had to find to his cost that there was no room in the fierce strife of Roman politics for moderate counsels. His proposal to reform the law courts excited the equestrian order and their friends in the senate to fury. The agrarian and corn laws which he coupled with it⁶ alienated many more in the senate, and roused the old anti-popular party feeling; finally, his known negotiations with the Italians were eagerly misrepresented to the jealous and excited people as evidence of complicity with a wide-spread conspiracy against Rome. His laws were carried, but the senate pronounced them null and void.⁷ Drusus was denounced in the senate house as a traitor, and on his way home was struck down by the hand of an unknown assassin.

The knights retained their monopoly of the courts, but this and all other domestic controversies were silenced for the time by the news which followed hard upon the murder of Drusus that the Italians were in open revolt against Rome. His assassination was the signal for an outbreak which had been secretly prepared for some time before. Throughout the highlands of central and southern Italy the flower of the Italian peoples rose as one man.⁸ Etruria and Umbria held aloof; the isolated Latin colonies stood firm; but the Sabellian clans, north and south, the Latinized Marsi and Paeligni, as well as the still Oscan-speaking Samnites and Lucanians, rushed to arms. No time was lost in proclaiming their plans for the future. A new Italian state was to be formed. The Paelignian town of Corfinium was selected as its capital and re-christened with the proud name of Italica. All Italians were to be citizens of this new metropolis, and here were to be the place of assembly and the senate house. A senate of 500 members and a magistracy resembling that of Rome completed a constitution which adhered closely to the very political traditions which its authors had most reason to abjure.

Now, as always in the face of serious danger, the action

of Rome was prompt and resolute. Both consuls took the field;¹ with each were five legates, among them the veteran Marius and his destined rival L. Cornelius Sulla, and even freedmen were pressed into service with the legions. But the first year's campaign opened disastrously. In central Italy the northern Sabellians, and in the south the Samnites, defeated the forces opposed to them. And though before the end of the year Marius and Sulla in the north, and the consul Cæsar himself in Campania, succeeded in inflicting severe blows on the enemy, and on the Marsi especially, it is not surprising that, with an empty treasury, with the insurgents' strength still unbroken, and with rumours of disaffection in the loyal districts, opinion in Rome should have turned in the direction of the more liberal policy which had been so often scornfully rejected and in favour of some compromise which should check the spread of the revolt, and possibly sow discord among their enemies. Towards the close of the year 90 the consul Cæsar carried the "lex Julia,"² by which the Roman franchise was offered to all communities which had not as yet revolted; early in the next year (89) the Julian law was supplemented by the "lex Plautia Papiria," introduced by two of the tribunes, which enacted that any citizen of an allied community then domiciled in Italy might obtain the franchise by giving in his name to a prætor in Rome within sixty days. A third law (lex Calpurnia) apparently passed at the same time empowered Roman magistrates in the field to bestow the franchise there and then upon all who were willing to receive it. This sudden opening of the closed gates of Roman citizenship was completely successful, and its effects were at once visible in the diminished vigour of the insurgents. By the end of 89 the Samnites and Lucanians were left alone in their obstinate hostility to Rome, and neither, thanks to Sulla's brilliant campaign in Samnium, had for the moment any strength left for active aggression.

The termination of the Social War brought with it no peace in Rome. The old quarrels were renewed with increased bitterness, and the newly enfranchised Italians themselves complained as bitterly of the restriction³ which robbed them of their due share of political influence by allowing them to vote only in a specified number of tribes. The senate itself was distracted by violent personal rivalries—and all these feuds, animosities, and grievances were aggravated by the widespread economic distress and ruin which affected all classes.⁴ Lastly, war with Mithradates had been declared; it was notorious that the privilege of commanding the force to be sent against him would be keenly contested, and that the contest would lie between the veteran Marius and L. Cornelius Sulla.⁵

It was in an atmosphere thus charged with the elements of disturbance that P. Sulpicius Rufus as tribune⁶ brought forward his laws. He proposed—(1) that the command of the Mithradatic war should be given to Marius, (2) that the new citizens should be distributed through all the tribes, (3) that the freedmen should no longer be confined to the four city tribes, (4) that any senator owing more

than 2000 denarii should lose his seat, (5) that those exiled on suspicion of complicity with the Italian revolt should be recalled. Whatever may have been Sulpicius's intentions, these proposals inevitably provoked a storm. The old voters bitterly resented the swamping of the existing constituency; the senate rallied its forces to oppose the alteration in the franchise of the freedmen and the proposed purging of its own ranks; and, lastly, both the senate and Sulla himself, now one of the consuls, prepared to resist the transference of the Asiatic command to Marius. Both sides were ominously ready for violent measures. The consuls, in order to prevent legislation, proclaimed a public holiday.⁷ Sulpicius replied by arming his followers and driving the consuls from the forum. The proclamation was withdrawn and the laws carried, but Sulpicius's triumph was short-lived. From Nola in Campania, where lay the legions commanded by him in the Social War, Sulla advanced on Rome, and for the first time a Roman consul entered the city at the head of the legions of the republic. Resistance was hopeless. Marius and Sulpicius fled,⁸ and Sulla, summoning the assembly of the centuries, proposed the measures he considered necessary for the public security, the most important being a provision that the sanction of the senate should be necessary before any proposal was introduced to the assembly.⁹ Then, after waiting in Rome long enough to hold the consular elections, he left for Asia early in 87. 667.

Sulla had conquered, but his victory cost the republic dear. He had first taught political partisans to look for final success, not to a majority of votes in the forum or campus, but to the swords of the soldiery; and he had shown that the legions, composed as they now were, could be trusted to regard nothing but the commands of a favourite leader. The lesson was well learnt. Shortly after his departure, Cinna as consul revived the proposals of Sulpicius;¹⁰ his colleague Octavius at the head of an armed force fell upon the new citizens who had collected in crowds to vote, and the forum was heaped high with the bodies of the slain.¹¹ Cinna fled, but fled like Sulla to the legions. When the senate declared him deposed from his consulship, he replied by invoking the aid of the soldiers in Campania in behalf of the violated rights of the people and the injured dignity of the consulship, and, like Sulla, found them ready to follow where he led. The neighbouring Italian communities, who had lost many citizens in the recent massacre, sent their new champion men and money;¹² while from Africa, whither he had escaped after Sulla's entry into Rome, came Marius with 1000 Numidian horsemen. He landed in Etruria, where his old veterans flocked to his standard, and at the head of some 6000 men joined Cinna before the gates of Rome. The senate had prepared for a desperate defence, but fortune was adverse, and after a brief resistance they gave way. Cinna was acknowledged as consul, the sentence of outlawry passed on Marius was revoked, and Cinna and Marius entered Rome with their troops. Marius's thirst for revenge was gratified by a frightful massacre, and he lived long enough to be nominated consul for the seventh time. But he held his consulship only a few weeks. Early in 86 he died, and for the next three years 668. Cinna ruled Rome. Constitutional government was virtu-

669, 670. ally suspended. For 85 and 84 Cinna nominated himself and a trusted colleague as consuls.¹ The state was, as Cicero² says, without lawful authority.³ One important matter was carried through—the registration in all the tribes of the newly enfranchised Italians,⁴ but beyond this little was done. The attention of Cinna and his friends was in truth engrossed by the ever-present dread of Sulla's return from Asia. The consul of 86, Valerius Flaccus, sent out to supersede him, was murdered by his own soldiers at Nicomedia.⁵ In 85 Sulla, though disowned by his government, concluded a peace with Mithradates.⁶ In 84, after settling affairs in Asia and crushing Flaccus's successor Fimbria, he crossed into Greece, and in the spring of 83 landed at Brundisium with 40,000 soldiers and a large following of emigré nobles. Cinna was dead,⁷ murdered like Flaccus by his mutinous soldiers; his most trusted colleague Carbo was commanding as proconsul in Cisalpine Gaul; and the resistance offered to Sulla's advance was slight. At Capua Sulla routed the forces of one consul, Norbanus; at Teanum the troops of the other went over in a body to the side of the outlawed proconsul. After a winter spent in Campania he pressed forward to Rome, defeated the younger Marius (consul 82) near Præneste, and entered the city without further opposition. In North Italy the success of his lieutenants Metellus, C. Pompeius, and Marcus Crassus had been fully as decisive. Cisalpine Gaul, Umbria, and Etruria had all been won for Sulla, and the two principal leaders on the other side, Carbo and Norbanus, had each fled, one to Rhodes, the other to Africa. Only one foe remained to be conquered. The Samnites and Lucanians whom Cinna had conciliated, and who saw in Sulla their bitterest foe, were for the last time in arms, and had already joined forces with the remains of the Marian army close to Rome. The decisive battle was fought under the walls of the city, and ended in the complete defeat of the Marians and Italians.⁸

672. For a period of nearly ten years Rome and Italy had been distracted by civil war. Constitutional government, whether by senate or assembly, had been in abeyance, while the opposing parties fought out their quarrels with the sword, under the leadership of generals at the head of legions ready and willing to follow them against their fellow citizens and against the established authorities of the state. The strife had spread from the Roman forum to Italy, and from Italy to the provinces; and for the first time the integrity of the empire was threatened by the conflicts of rival governors.⁹ The tottering fabric of Italian prosperity had been rudely shaken by the ravages of war. Class hatreds and personal feuds distracted the community, while the enfranchisement of the Italians was in itself a revolution which affected the very foundations of the republic. Such was the situation with which Sulla was now called upon to deal. It was for him to heal the divisions which rent the state asunder, to set in working again the machinery of civil government, and above all so to modify it as to meet the altered conditions,

and to fortify it against the dangers which visibly threatened it in the future. The real charge against Sulla¹⁰ is not that he failed to accomplish all this, for to do so was beyond the powers even of a man so able, resolute, and self-confident as Sulla, armed though he was with absolute authority and backed by overwhelming military strength and the prestige of unbroken success. He stands convicted rather of deliberately aggravating some and culpably ignoring others of the evils he should have tried to cure, and of contenting himself with a party triumph when he should have aimed at the regeneration and confirmation of the whole state. His victory was instantly followed, not by any measures of conciliation, but by a series of massacres, proscriptions, and confiscations, of which almost the least serious consequence was the immediate loss of life which they entailed.¹¹ From this time forward the fear of proscription and confiscation recurred as a possible consequence of every political crisis, and it was with difficulty that Cæsar himself dissipated the belief that his victory would be followed by a Sullan reign of terror. The legacy of hatred and discontent which Sulla left behind him was a constant source of disquiet and danger. In the children of the proscribed, whom he excluded from holding office, and the dispossessed owners of the confiscated lands, every agitator found ready and willing allies.¹² The moneyed men of the equestrian order were more than ever hostile to the senatorial government, which they now identified with the man who cherished towards them a peculiar hatred,¹³ and whose creatures had hunted them down like dogs. The attachment which the new Italian citizens might in time have learnt to feel for the old republican constitution was nipped in the bud by the massacres at Præneste and Norba, by the harsh treatment of the ancient towns of Etruria, and by the ruthless desolation of Samnium and Lucania.¹⁴ Quite as fatal were the results to the economic prosperity of the peninsula. Sulla's confiscations, following on the civil and social wars, opened the doors wide for a long train of evils. The veterans whom he planted on the lands he had seized¹⁵ did nothing for agriculture, and swelled the growing numbers of the turbulent and discontented.¹⁶ The "Sullan men" became as great an object of fear and dislike as the "Sullan reign."¹⁷ The "latifundia" increased with startling rapidity—whole territories passing into the hands of greedy partisans.¹⁸ Wide tracts of land, confiscated but never allotted, ran to waste.¹⁹ In all but a few districts of Italy the free population finally and completely disappeared from the open country; and life and property were rendered insecure by the brigandage which now developed unchecked, and in which the herdsmen slaves played a prominent part. The outbreaks of Spartacus in 73, and of Catiline ten years later, were significant com- 681.
mentaries on this part of Sulla's work.²⁰ His constitutional
legislation, while it included many useful administrative
reforms, is marked by as violent a spirit of partisanship, legisla-
tion of
and as apparently wilful a blindness to the future. The Sulla.

666.

re-establishment on a legal basis of the ascendancy which custom had so long accorded to the senate was his main object. With this purpose he had already, when consul in 88, made the "senatus auctoritas" legally necessary for proposals to the assembly. He now as dictator¹ followed this up by crippling the power of the magistracy, which had been the most effective weapon in the hands of the senate's opponents. The legislative freedom of the tribunes was already hampered by the necessity of obtaining the senate's sanction; in addition, Sulla restricted their wide powers of interference (intercessio) to their original purpose of protecting individual plebeians,² and discredited the office by prohibiting a tribune from holding any subsequent office in the state.³ The control of the courts (quaestiones perpetuae) was taken from the equestrian order and restored to the senate.⁴ To prevent the people from suddenly installing and keeping in high office a second Marius, he re-enacted the old law against re-election,⁵ and made legally binding the custom which required a man to mount up gradually to the consulship through the lower offices.⁶ His increase of the number of praetors from six to eight,⁷ and of quaestors to twenty,⁸ though required by administrative necessities, tended, by enlarging the numbers and further dividing the authority of the magistrates, to render them still more dependent upon the central direction of the senate. Lastly, he replaced the pontifical and augural colleges in the hands of the senatorial nobles, by enacting that vacancies in them should, as before the lex Domitia (104), be filled up by co-optation.⁹ This policy of deliberately altering the constitution, so as to make it pronounce in favour of his own party, was open to two grave objections. It was not to be expected that the new legal safeguards would protect the senate any more efficiently than the established custom and tradition which the Gracchi had broken down; and, secondly, it was inevitable that the popular party would on the first opportunity follow Sulla's example, and alter the constitution to suit themselves. Still less was Sulla successful in fortifying the republican system against the dangers which menaced it from without. He accepted as an accomplished fact the enfranchisement of the Italians,¹⁰ but he made no provision to guard against the consequent reduction of the comitia to an absurdity, and with them of the civic government which rested upon them, or to organize an effective administrative system for the Italian communities.¹¹ Of all men, too, Sulla had the best reason

650.

to appreciate the dangers to be feared from the growing independence of governors and generals in the provinces, and from the transformation of the old civic militia into a group of professional armies, devoted only to a successful leader, and with the weakest possible sense of allegiance to the state. He had himself, as proconsul of Asia, contemptuously and successfully defied the home government, and he, more than any other Roman general, had taught his soldiers to look only to their leader, and to think only of booty.¹² Yet, beyond a few inadequate regulations, there is no evidence that Sulla dealt with these burning questions, the settlement of which was among the greatest of the achievements of Augustus.¹³ One administrative reform of real importance must, lastly, be set down to his credit. The judicial procedure first established in 149 605-673. for the trial of cases of magisterial extortion in the provinces, and applied between 149 and 81 to cases of treason and bribery, Sulla extended so as to bring under it the chief criminal offences, and thus laid the foundations of the Roman criminal law.¹⁴

The Sullan system stood for nine years, and was then Overthrown—as it had been established—by a successful of the Sullan soldier. It was the fortune of Cn. Pompeius, a favourite of the Sullan officer of Sulla, first of all to violate in his own person the fundamental principles of the constitution re-established constitution, 70 = 684. by his old chief, and then to overturn it. In Spain the Marian governor Q. Sertorius (see SERTORIUS) had defeated one after another of the proconsuls sent out by the senate, and was already in 77 master of all Hither Spain.¹⁵ To 677. meet the crisis, the senate itself took a step which was in fact the plainest possible confession that the system sanctioned afresh by Sulla was inadequate to the needs of the state. Pompey, who was not yet thirty, and had never held even the quaestorship, was sent out to Spain with proconsular authority.¹⁶ Still Sertorius held out, until in 73 he was foully murdered by his own officers. 681. The native tribes who had loyally stood by him submitted, and Pompey early in 71 returned with his troops to Italy, 683. where, during his absence in Spain, an event had occurred which had shown Roman society with startling plainness how near it stood to revolution. In 73 Spartacus,¹⁷ a 681. Thracian slave, escaped with seventy others from a gladiators' training school at Capua. In an incredibly short time he found himself at the head of a numerous force

¹² Sall., *Cat.*, ii., "L. Sulla exercitum, quo sibi fidem faceret, contra morem majorum luxuriose nimisque liberaliter habuerat."

¹³ There was a "lex Cornelia de provinciis ordinandis," but only two of its provisions are known:—(1) that a magistrate sent out with the imperium should retain it till he re-entered the city (*Cic. Ad Fam.*, i. 9, 25), a provision which increased rather than diminished his freedom of action; (2) that an outgoing governor should leave his province within thirty days after his successor's arrival (*Cic. Ad Fam.*, iii. 6, 4). A "lex Cornelia de maiestate" contained, it is true, a definition of treason evidently framed in the light of recent experience. The magistrate was forbidden "exire de provincia, educere exercitum, bellum sua sponte gerere, in regnum injussu populi ac senatus accedere," *Cic. In Pis.*, 21. Sulla also added one to the long list of laws dealing with extortion in the provinces. But the danger lay, not in the want of laws, but in the want of security for their observance by an absolutely autocratic proconsul. The present writer cannot agree with those who would include among Sulla's laws one retaining consuls and praetors in Rome for their year of office and then sending them out to a province. This was becoming the common practice before 81. After 81 it is invariable for praetors, as needed for the judicial work, and invariable but for two exceptions in the case of consuls; but nowhere is there a hint that there had been any legislation on the subject, and there are indications that it was convenience and not law which maintained the arrangement. Mommsen, ii. 355; Marquardt, *Staatsverw.*, i. 378.

¹⁴ For this, the most lasting of Sulla's reforms, see Mommsen, ii. 359; Rein, *Criminal-Recht*; Zumpt, *Criminal-Prozess d. Römer*.

¹⁵ For the Sertorian War, see Plutarch, *Sertorius*.

¹⁶ Plut., *Pomp.*, 17; Livy, *Epit.*, xci. For Pompey's earlier life, see POMPEY.

¹⁷ App., i. 116; Livy, *Epit.*, xcvi; Plut., *Crass.*, 8 sq.

¹ For Sulla's dictatorship as in itself a novelty, see App., i. 98; Plut., *Sulla*, 33; *Cic. Ad Att.*, 9, 15; *Cic. De Legg.*, i. 15.

² *Cic. De Legg.*, iii. 22, "injuriae faciendae potestatem ademit, auxilii ferendi reliquit." Cf. *Cic. Verr.*, i. 60; Livy, *Epit.*, lxxxix.

³ *Cic. Pro Cornel.*, fr. 78; Ascon. *In Corn.*, 78; Appian, i. 100.

⁴ Velleius, ii. 32; Tac., *Ann.*, xi. 22; *Cic. Verr.*, i. 13.

⁵ App., *B. C.*, i. 100; cf. Livy, vii. 42 (342 B.C.), "ne quis eundem magistratum intra decem annos caperet."

⁶ The custom had gradually established itself. Cf. Livy, xxxii. 7. The "certus ordo magistratuum" legalized by Sulla was—quaestorship, praetorship, consulate; App., i. 100.

⁷ Pompon., *De Orig. Juris (Dig.)*, i. 2, 2; Velleius, ii. 89. Compare also Cicero *In Pison.*, 15, with Id. *Pro Milone*, 15. The increase was connected with his extension of the system of "quaestiones perpetuae," which threw more work on the praetors as the magistrates in charge of the courts.

⁸ Tac., *Ann.*, xi. 22. The quaestorship henceforward carried with it the right to be called up to the senate. By increasing the number of quaestors, Sulla provided for the supply of ordinary vacancies in the senate and restricted the censors' freedom of choice in filling them up. Fragments of the "lex Cornelia de XX quaestoribus" survive. See *C. I. L.*, 108.

⁹ Dio Cass., xxxvii. 37; Ps. Ascon., 102 (Orelli). He also increased their numbers; Livy, *Epit.*, lxxxix.

¹⁰ He did propose to deprive several communities which had joined Cinna of the franchise, but the deprivation was not carried into effect; *Cic. Pro Domo*, 80, and *Pro Caecina*, 33, 35.

¹¹ There is no evidence to show that Sulla's legislation touched at all upon municipal government in Italy; cf. Mommsen, ii. 361 sq.

of runaway slaves, outlaws, brigands, and impoverished peasants. By the end of 73 he had 70,000 men under his command, had twice defeated the Roman troops, and was master of southern Italy. In 72 he advanced on Rome, but, though he again routed the legions led against him by the consuls in person, he abandoned his scheme and established himself in the now desolate country near Thurii, already the natural home of brigandage. At length in 71 the prætor Crassus, who had been sent against him with no less than six legions, ended the war. Spartacus was defeated and slain in Apulia. In Rome itself the various classes and parties hostile to the Sullan system had, ever since Sulla's death in 78, been incessantly agitating for the repeal of his most obnoxious laws, and needed only a leader in order successfully to attack a government discredited by failure at home and abroad. With the return of Pompey from Spain their opportunity came. Pompey, who understood politics as little as Marius, was anxious to obtain—what the senate was more than likely to refuse to give him, and what he was not legally entitled to—a triumph, the consulship for the next year (70), and as the natural consequence of this an important command in the East. The opposition wanted his name and support, and a bargain was soon struck. Pompey and with him Marcus Crassus, the conqueror of Spartacus, were elected consuls, almost in the presence of their troops, which lay encamped outside the gates in readiness to assist at the triumph and ovation granted to their respective leaders. Pompey lost no time in performing his part of the agreement. The tribunes regained their prerogatives.¹ The "perpetual courts" were taken out of the hands of the senatorial judges, who had outdone the equestrian order in scandalous corruption,² and finally the censors, the first since 86 B.C., purged the senate of the more worthless and disreputable of Sulla's partisans.³ The victory was complete; but for the future its chief significance lay in the clearness with which it showed that the final decision in matters political lay with neither of the two great parties in Rome, but with the holder of the military authority. The recognition of this fact was fatal to the dignity of politics in the city. In proportion as the mass of the Roman community in Italy, and able aspirants to power, like Cæsar, became conscious of the unreality of the old constitutional controversies, they became indifferent to the questions which agitated the forum and the curia and contemptuously ready to alter or disregard the constitution itself, when it stood in the way of interests nearer to their hearts. Of this growing indifference to the traditional politics of the republic, against which Cicero struggled in vain, Pompey is an excellent example. He was absolutely without interest in them, except in so far as they led up to important military commands, and, though he was never revolutionary in intention, his own career, in its quiet defiance of all the established rules of the constitution, did almost more than the direct attacks of others to render the republic impossible.

Gabinian and Manilian laws. When his consulship ended, Pompey impatiently awaited at the hands of the politicians he had befriended the further gift of a foreign command. He declined an ordinary

province, and from the end of 70 to 67 he remained at 684-7. Rome in a somewhat affectedly dignified seclusion.⁴ But in 67 and 66 the laws of Gabinus and Manilius gave him 687, 688. all and more than all that he expected. The ravages of the pirates, encouraged in the first instance by the inactivity which had marked Roman policy in the East after 167, and by the absence of any effective Roman navy in the Mediterranean, had now risen to an intolerable height, and the spasmodic efforts made since 81 had done little to check them. The trade of the Mediterranean was paralysed, and even the coasts of Italy were not safe from their raids.⁵ Aulus Gabinus, a tribune, and a follower of Pompey, now proposed to the people to entrust Pompey with the sole command against the pirates.⁶ His command was to last for three years. He was to have supreme authority over all Roman magistrates in the provinces throughout the Mediterranean and over the coasts for 50 miles inland. Fifteen legati, all of prætorian rank, were assigned to him, with two hundred ships, and as many troops as he thought desirable. These powers were still further enlarged in the next year by the Manilian law, which transferred from Lucullus and Glabrio to Pompey the conduct of the Mithradatic war in Asia, and with it the entire control of Roman policy and interests in the East.⁷ The unrepudiated character of the position thus granted to Pompey, and the dangers of the precedent established, were clearly enough pointed out by such moderate men as Q. Lutatius Catulus, the "father of the senate," and by the orator Hortensius—but in vain. Both laws were supported, not only by the tribunes and the populace, but by the whole influence of the "publicani" and "negotiores," whose interests in the East were at stake.

Pompey left Rome in 67, and did not return to Italy Cæsar. till towards the end of 62. The interval was marked in 687, 692. Rome by the rise to political importance of Cæsar and Cicero, and by Catiline's attempt at revolution. When in 70 684. the removal of the restrictions placed upon the tribunate restored to the popular party their old weapons of attack, Cæsar was already a marked man. In addition to his patrician birth, and his reputation for daring and ability, he possessed, as the nephew of Marius and the son-in-law of Cinna, a strong hereditary claim to the leadership of the popular and Marian party. He had already taken part in the agitation for the restoration of the tribunate; he had supported the Manilian law; and, when Pompey's withdrawal left the field clear for other competitors, he stepped at once into the front rank on the popular side.⁸ He took upon himself, as their nearest representative, the task of clearing the memory and avenging the wrongs of the great popular leaders, Marius, Cinna, and Saturninus. He publicly reminded the people of Marius's services, and set up again upon the Capitol the trophies of the Cimbric War. He endeavoured to bring to justice, not only the ringleaders in Sulla's bloody work of proscription, but even the murderers of Saturninus, and vehemently pleaded the cause of the children of the proscribed. While thus carrying on in genuine Roman fashion the feud of his family, he attracted the sympathies of the Italians by his efforts to procure the Roman franchise for the Latin communities beyond the Po, and won the affections of the populace in Rome and its immediate neighbourhood by the splendour of the games which he gave as curule ædile (65), and by his lavish expenditure upon the improve- 689.

¹ The exact provisions of Pompey's law are nowhere given; Livy, *Epit.*, xvii., "tribuniciam potestatem restituerunt." Cf. Velleius, ii. 30. A "lex Aurelia," in 75, had already repealed the law disqualifying a tribune for further office; Cic., *Corn.*, fr. 78.

² This was the work of L. Aurelius Cotta, prætor in this year. The "judices" were to be taken in equal proportions from senators, equites, and "tribuni aerarii." For the latter and for the law generally, see Madvig, *Verf.*, i. 182, ii. 222; Lange, *R. Alt.*, iii. 193. Compare also Cicero's language, *In Verr.*, i. 1, 15. The prosecution of Verres shortly preceded the lex Aurelia.

³ Livy, *Epit.*, xcviii. Sixty-four senators were expelled. Cf. Plut., *Pomp.*, 22; Cic. *In Verr.*, i. 1, 15.

⁴ Velleius, ii. 31; Plut., *Pomp.*, 23.

⁵ See the brilliant sketch by Mommsen, *R. G.*, iii. 39 sq.

⁶ Plut., *Pomp.*, 25; Dio, xxxvi. 6; Livy, *Epit.*, c.

⁷ Cic. *Pro Lege Manilia*; Dio, xxxvi. 25; Plut., *Pomp.*, 30.

⁸ Prof. Beesly, in his essay on Catiline, has vainly endeavoured to show that Catiline and not Cæsar was the popular leader from 67 to 63. That this is the inference intentionally conveyed by Sallust, in order to screen Cæsar, is true, but the inference is a false one.

ment of the Appian Way. But it is characteristic of Cæsar and of his time that these measures were with him only means to the further end of creating for himself a position such as that which Pompey had already won; and this ulterior aim he pursued with a skill, and with an audacious indifference to constitutional forms and usages, unsurpassed even by Sulla. His coalition with Crassus, soon after Pompey's departure, secured him an ally whose colossal wealth and wide financial connexions were of inestimable value, and whose vanity and inferiority of intellect rendered him a willing tool. The story of his attempted *coup d'état* in January 65 is probably false,¹ but it is evident that by the beginning of 63 he was bent on reaping the reward of his exertions by obtaining from the people an extraordinary command abroad, which should secure his position before Pompey's return; and the agrarian law proposed early that year by the tribune Rullus had for its real object the creation, in favour of Cæsar and Crassus, of a commission with powers so wide as to place its members almost on a level with Pompey himself.² It was at this moment, when all seemed going well, that Cæsar's hopes were dashed to the ground by Catiline's desperate outbreak, which not only discredited every one connected with the popular party, but directed the suspicions of the well-to-do classes against Cæsar himself, as a possible accomplice in Catiline's revolutionary schemes.³

689.

691.

Cicero.

The same wave of indignation and suspicion which for the moment checked Cæsar's rise carried Marcus Tullius Cicero to the height of his fortunes. Cicero, as a politician, has been equally misjudged by friends and foes. That he was deficient in courage, that he was vain, and that he attempted the impossible, may be admitted at once. But he was neither a brilliant and unscrupulous adventurer nor an aimless trimmer, nor yet a devoted champion merely of senatorial ascendancy.⁴ He was a representative man, with a numerous following, and a policy which was naturally suggested to him by the circumstances of his birth, connexions, and profession, and which, impracticable as it proved to be, was yet consistent, intelligible, and high-minded. Born at Arpinum, he cherished like all Arpinates the memory of his great fellow-townsmen Marius, the friend of the Italians, the saviour of Italy, and the irreconcilable foe of Sulla and the nobles. A "municipal" himself, his chosen friends and his warmest supporters were found among the well-to-do classes in the Italian towns.⁵ Unpopular with the Roman aristocracy, who despised him as a "peregrinus,"⁶ and with the Roman populace, he was the trusted leader of the Italian middle class, "the true Roman people," as he proudly styles them. It was they who carried his election for the consulship⁷ (63), who in 58 insisted on his recall from exile,⁸ and it was his influence with them which made Cæsar so anxious to win him over in 49. He represented their antipathy alike to socialistic schemes and to aristocratic exclusiveness, and their old-fashioned simplicity of life in contrast

691, 696.

705.

¹ The story is so told by Suetonius, *Jul.*, 8. In Sallust, *Cat.*, 18, it appears as an intrigue originating with Catiline, and Cæsar's name is omitted.

² Cic., *Lex Agr.*, ii. 6, "nihil aliud actum nisi ut decem reges constituerentur."

³ That Cæsar and Crassus had supported Catiline for the consulship in 65 is certain, and they were suspected naturally enough of favouring his designs in 63, but their complicity is in the highest degree improbable.

⁴ Mommsen is throughout unfair to Cicero, as also are Drumann and Prof. Beesly. The best estimate of Cicero's political position known to the present writer is that given by Prof. Tyrrell in the Introduction to his edition of Cicero's *Letters*.

⁵ Cic. *Ad Att.*, i. 191, "locupletes . . . noster exercitus."

⁶ Cic. *Pro Sulla*, 7; Sall., *Cat.*, 31, "inquinus urbis Romæ."

⁷ See the *De Petitione Consulatus*, *passim*.

⁸ *De Domo*, 28; *Pro Plancio*, 97.

with the cosmopolitan luxury of the capital.⁹ By birth, too, he belonged to the equestrian order, the foremost representatives of which were indeed still the publicani and negotiatores, but which since the enfranchisement of Italy included also the substantial burgesses of the Italian towns and the smaller "squires" of the country districts. With them, too, Cicero was at one in their dread of democratic excesses and their social and political jealousy of the "nobles."¹⁰ Lastly, as a lawyer and a scholar, he was passionately attached to the ancient constitution. His political ideal was the natural outcome of these circumstances of his position. He advocated the maintenance of the old constitution, but not as it was understood by the extreme politicians of the right and left. The senate was to be the supreme directing council,¹¹ but the senate of Cicero's dreams was not an oligarchic assemblage of nobles, but a body freely open to all citizens, and representing the worth of the community.¹² The magistrates, while deferring to the senate's authority, were to be at once vigorous and public-spirited; and the assembly itself which elected the magistrates and passed the laws was to consist, not of the "mob of the forum," but of the true Roman people throughout Italy.¹³ For the realization of this ideal he looked, above all things, to the establishment of cordial relations between the senate and nobles in Rome and the great middle class of Italy represented by the equestrian order, between the capital and the country towns and districts. This was the "concordia ordinum," the "consensus Italiae," for which he laboured.¹⁴ He failed because his ideal was impracticable. The inveterate selfishness and exclusiveness of the nobles, the indifference of the Italians to constitutional questions, and their suspicious dislike of Roman politicians, above all the incompetency of the old machinery, even if reformed as he would have had it reformed, to govern the empire and control the proconsuls and the army, were insuperable obstacles in his way.

Cicero's election to the consulship for 63 over the heads of Cæsar's nominees, Antonius and Catiline, was mainly the work of the Italian middle class, already rendered uneasy both by the rumours which were rife of revolutionary schemes and of Cæsar's boundless ambition, and by the numerous disquieting signs of disturbance noticeable in Italy.

The new consul vigorously set himself to discharge the trust placed in him. He defeated the insidious proposals of Rullus for Cæsar's aggrandizement, and assisted in quashing the prosecution of Rabinus. But with the consular elections in the autumn of 63 a fresh danger arose from a different quarter. The "conspiracy" of Catiline (see CATILINE) was not the work of the popular party, and still less was it an unselfish attempt at reform; L. Sergius Catilina himself was a patrician, who had held high office, and possessed considerable ability and courage; but he was bankrupt in character and in purse, and two successive defeats in the consular elections had rendered him desperate. To retrieve his broken fortunes by violence was a course which was only too readily suggested by the history of the last forty years, and materials for a conflagration abounded on all sides. The danger to be feared from his intrigues lay in the state of Italy, which made a revolt against society and the established government only too likely if once a leader presented himself, and it was such a revolt that Catiline

⁹ Cic. *Pro Quintio*, 31; *Pro Cluentio*, 46, 153.

¹⁰ Cic. *In Verr.*, ii. 73; *De Pet. Cons.*, i. He shared with them their dislike to Sulla, as the foe of their order; *Pro Cluentio*, 55.

¹⁴ *Ad Att.*, i. 18.

¹⁵ For Catiline's conspiracy, see Sallust, *Catiline*; Cicero *In Catilinam*; Plut., *Cicero*; Mommsen, *R. G.*, iii. 164 sq.; and especially C. John, *Entstehung d. Catilinarischen Verschwörung* (Leipsic, 1876).

endeavoured to organize. Bankrupt nobles like himself, Sullan veterans and the starving peasants whom they had dispossessed of their holdings, outlaws of every description, the slave population of Rome, and the wilder herdsmen-slaves of the Apulian pastures, were all enlisted under his banner, and attempts were even made to excite disaffection among the newly-conquered people of southern Gaul and the warlike tribes who still cherished the memory of Sertorius in Spain. In Etruria, the seat and centre of agrarian distress and discontent, a rising actually took place headed by a Sullan centurion, but the spread of the revolt was checked by Cicero's vigorous measures. Catiline fled from Rome, and died fighting with desperate courage at the head of his motley force of old soldiers, peasants, and slaves. His accomplices in Rome were arrested, and, after an unavailing protest from Cæsar, the senate authorized the consuls summarily to put them to death.

The Catilinarian outbreak had been a blow to Cæsar, whose schemes it interrupted, but to Cicero it brought, not only popularity and honour, but, as he believed, the realization of his political ideal. The senate and the equestrian order, the nobles of Rome and the middle class in the country, had made common cause in the face of a common danger; and the danger had been averted by the vigorous action of a consul sprung from the people, under the guidance of a united senate, and backed by the mass of good citizens.

Return of Pompey from Asia.
 691.
 695.
 Coalition of Pompey, Cæsar, and Crassus, 60 = 694.

But Pompey was now on his way home,¹ and again as in 70 the political future seemed to depend on the attitude which the successful general would assume; Pompey himself looked simply to the attainment by the help of one political party or another of his immediate aims, which at present were the ratification of his arrangements in Asia and a grant of land for his troops. It was the impracticable jealousy of his personal rivals in the senate, aided by the versatility of Cæsar, who presented himself not as his rival but as his ally, which drove Pompey once more, in spite of Cicero's efforts, into the camp of what was still nominally the popular party. In 60, on Cæsar's return from his propretorship in Spain, the coalition was formed which is known by the somewhat misleading title of the first triumvirate.² Pompey was ostensibly the head of this new alliance, and in return for the satisfaction of his own demands he undertook to support Cæsar's candidature for the consulship. The wealth and influence of Crassus were enlisted in the same cause, but what he was to receive in exchange is not clear. Cicero was under no illusions as to the significance of this coalition. It scattered to the winds his dreams of a stable and conservative republic. Pompey, whom he had hoped to enlist as the champion of constitutional government, had been driven into the arms of Cæsar. The union between the senate and the equestrian order had been dissolved, and the support of the publicani lost by an untimely quarrel over the price to be paid for collecting the taxes of Asia, and, to crown all, both his own personal safety and the authority of the senate were threatened by the openly avowed intentions of Catiline's friends to bring the consul of 63 to account for his unconstitutional execution of Catiline's accomplices. His fears were fully justified by the results. The year 59 saw the republic powerless in the hands of three citizens. Cæsar as consul procured the ratification of Pompey's acts in Asia, conciliated the publicani by granting them

the relief refused by the senate, and carried an agrarian law of the new type, which provided for the purchase of lands for allotment at the cost of the treasury, and for the assignment of the rich "ager Campanus."³ But Cæsar aimed at more than the carrying of an agrarian law in the teeth of the senate or any party victory in the forum. An important military command was essential to him, and he judged correctly enough that in the West there was work to be done which might enable him to win a position such as Pompey had achieved in the East. An obedient tribune was found, and by the lex Vatinia he was given for five years the command of Cisalpine Gaul and Illyricum, to which was added by a decree of the senate Transalpine Gaul also.⁴ It was a command which not only opened to him a great military career, but enabled him, as the master of the valley of the Po, to keep an effective watch on the course of affairs in Italy.

Early the next year the attack upon himself which Cicero had foreseen was made. P. Clodius as tribune brought forward a law enacting that any one who had put a Roman citizen to death without trial by the people should be interdicted from fire and water. Cicero finding himself deserted even by Pompey left Rome in a panic, and by a second Clodian law he was declared to be outlawed.⁵ With Cæsar away in his province, and Cicero banished, Clodius was for the time master in Rome. But, absolute as he was in the streets, and recklessly as he parodied the policy of the Gracchi by violent attacks on the senate, his tribunate merely illustrated the anarchy which now inevitably followed the withdrawal of a strong controlling hand. A reaction speedily followed. Pompey, bewildered and alarmed by Clodius's violence, at last bestirred himself. Cicero's recall was decreed by the senate, and early in August 57 in the comitia centuriata, to which his Italian supporters flocked in crowds, a law was passed revoking the sentence of outlawry passed upon him.

Intoxicated by the acclamations which greeted him, and encouraged by Pompey's support, and by the salutary effects of Clodius's excesses, Cicero's hopes rose high, and a return to the days of 63 seemed not impossible.⁶ With indefatigable energy he strove to reconstruct a solid constitutional party, but only to fail once more. Pompey was irritated by the hostility of a powerful party in the senate, who thwarted his desires for a fresh command and even encouraged Clodius in insulting the conqueror of the East. Cæsar became alarmed at the reports which reached him that the repeal of his agrarian law was threatened and that the feeling against the coalition was growing in strength; above all he was anxious for a renewal of his five years' command. He acted at once, and in the celebrated conference at Luca (56) the alliance of the three self-constituted rulers of Rome was renewed. Cicero succumbed to the inevitable and withdrew in despair from public life. Pompey and Crassus became consuls for 55. Cæsar's command was renewed for another five years, and to each of his two allies important provinces were assigned for a similar period—Pompey

³ For the lex Julia Agraria and the lex Campana, see Dio Cass., xxxviii. 1; App., *B. C.*, ii. 10; Suet., *Cæsar*, 20; Cic. *Ad Att.*, ii. 16, 18.

⁴ Suet., *Cæsar*, 22; Dio Cass., xxxviii. 8; App., *B. C.*, ii. 13; Plut., *Cæs.*, 14.

⁵ Both laws were carried in the "comitia tributa." The first merely reaffirmed the right of appeal, as the law of Gaius Gracchus had done. The second declared Cicero to be already by his own act in leaving Rome "interdicted from fire and water,"—a procedure for which precedents could be quoted. Clodius was within the letter of the law.

⁶ Cicero's speech *Pro Sestio* gives expression to these feelings; it contains a passionate appeal to all good citizens to rally round the old constitution. The acquittal of Sestius confirmed his hopes. See *Ad Q. Fr.*, ii. 4.

¹ For the history of the next eighteen years, the most important ancient authority is Cicero in his letters and speeches.

² Misleading, because the coalition was unofficial. The "triumvirs" of 43 were actual magistrates, "iuviri reipublicae constituendae causa."

receiving the two Spains and Africa, and Crassus Syria.¹ The coalition now divided between them the control of the empire. For the future the question was, how long the coalition itself would last. Its duration proved to be short. In 53 Crassus was defeated and slain by the Parthians at Carrhæ, and in Rome the course of events slowly forced Pompey into an attitude of hostility to Cæsar. The year 54 brought with it a renewal of the riotous anarchy which had disgraced Rome in 58-57. Conscious of its own helplessness, the senate, with the eager assent of all respectable citizens, dissuaded Pompey from leaving Italy. His provinces were left to his legates, and he himself remained at home to maintain order by the weight of his influence. It was a confession that the republic could not stand alone. But Pompey's mere presence proved insufficient. The anarchy and confusion grew worse, and even strict constitutionalists like Cicero talked of the necessity of investing Pompey with some extraordinary powers for the preservation of order.² At last in 52 he was elected sole consul, and not only so, but his provincial command was prolonged for five years more, and fresh troops were assigned him.³ The rôle of "saviour of society" thus thrust upon Pompey was one which flattered his vanity, but it entailed consequences which it is probable he did not foresee, for it brought him into close alliance with the senate, and in the senate there was a powerful party who were resolved to force him into heading the attack they could not successfully make without him upon Cæsar. It was known that the latter, whose command expired in March 49, but who in the ordinary course of things would not have been replaced by his successor until January 48, was anxious to be allowed to stand for his second consulship in the autumn of 49 without coming in person to Rome.⁴ His opponents in the senate were equally bent on bringing his command to an end at the legal time, and so obliging him to disband his troops and stand for the consulship as a private person, or, if he kept his command, on preventing his standing for the consulship. Through 51 and 50 the discussions in the senate and the negotiations with Cæsar continued, but with no result. On 1st January 49 Cæsar made a last offer of compromise. The senate replied by requiring him on pain of outlawry to disband his legions. Two tribunes who supported him were ejected from the senate house, and the magistrates with Pompey were authorized to take measures to protect the republic. Cæsar hesitated no longer; he crossed the Rubicon and invaded Italy. The rapidity of his advance astounded and bewildered his foes. Pompey, followed by the consuls, by the majority of the senate and a long train of nobles, abandoned Italy as untenable, and crossed into Greece.⁵ At the end of March Cæsar entered Rome as the master of Italy. The story of the civil war which followed, down to the victory at Munda in the spring of 45, has been told elsewhere.⁶ We are concerned here with the work which Cæsar achieved in the brief intervals

of rest allowed him during these stormy years, and with the place which his dictatorship holds in the history of Rome.

The task which Cæsar had to perform was no easy one. Dictatorship of Cæsar, 48-44=706-710. It came upon him suddenly; for there is no sufficient reason to believe that Cæsar had long premeditated revolution, or that he had previously aspired to anything more than such a position as that which Pompey had already won, a position unrepublican indeed, but accepted by republicans as inevitable.⁷ War was forced upon him as the alternative to political suicide, but success in war brought the responsibilities of nearly absolute power, and Cæsar's genius must be held to have shown itself in the masterly fashion in which he grasped the situation, rather than in the supposed sagacity with which he is said to have foreseen and prepared for it. In so far as he failed, his failure was mainly due to the fact that his tenure of power was too short for the work which he was required to perform. From the very first moment when Pompey's ignominious retreat left him master of Italy, he made it clear that he was neither a second Sulla nor even the reckless anarchist which many believed him to be.⁸ The Roman and Italian public were first startled by the masterly rapidity and energy of his movements, and then agreeably surprised by his lenity and moderation. No proscriptions or confiscations followed his victories, and all his acts evinced an unmistakable desire to effect a sober and reasonable settlement of the pressing questions of the hour; of this, and of his almost superhuman energy, the long list of measures he carried out or planned is sufficient proof. The "children of the proscribed" were at length restored to their rights,⁹ and with them many of the refugees¹⁰ who had found shelter in Cæsar's camp during the two or three years immediately preceding the war; but the extreme men among his supporters soon realized that their hopes of "novae tabulae" and grants of land were illusory. In allotting lands to his veterans, Cæsar carefully avoided any disturbance of existing owners and occupiers,¹¹ and the mode in which he dealt with the economic crisis produced by the war seems to have satisfied all reasonable men.¹² It had been a common charge against Cæsar in former days that he paid excessive court to the populace of Rome, and now that he was master he still dazzled and delighted them by the splendour of the spectacles he provided, and by the liberality of his largesses. But he was no indiscriminate flatterer of the mob. The popular clubs and guilds which had helped to organize the anarchy of the last few years were dissolved.¹³ A strict inquiry was made into the distribution of the monthly doles of corn, and the number of recipients was reduced by one half;¹⁴ finally, the position of the courts of justice was raised by the abolition of the popular element among the judges.¹⁵ Nor did Cæsar shrink from the attempt, in which so many had failed before him, to mitigate the twin evils which were ruining the prosperity of Italy,—the concentration of a

¹ Livy, *Epit.*, cv.; Dio Cass., xxxix. 31. For Cicero's views, see *Ep. Ad Fam.*, i. 9; *Ad Att.*, iv. 5.

² A dictatorship was talked of in Rome; Plut., *Pomp.*, 54; Cic. *Ad Q. Fr.*, iii. 8. Cicero himself anticipated Augustus in his picture of a "princeps civitatis" sketched in a lost book of the *De Republica*, written about this time, which was based upon his hopes of what Pompey might prove to be; *Ad Att.*, viii. 11; August., *De Civ. Dei*, v. 13.

³ Plut., 56; App., *B. C.*, ii. 24.

⁴ For the rights of the question involved in the controversy between Cæsar and the senate, see Mommsen, *Rechtsfrage zw. Cæsar und d. Senat*; Guiraud, *Le Différend entre Cæsar et le Sénat* (Paris, 1878).

⁵ Cicero severely censures Pompey for abandoning Italy, but strategically the move was justified by the fact that Pompey's strength lay in the East, where his name was a power, and in his control of the sea. Politically, however, it was a blunder, as it enabled Cæsar to pose as the defender of Italy.

⁶ See arts. CÆSAR, CICERO, and POMPEY.

⁷ On this, as on many other points connected with Cæsar, divergence has here been ventured on from the views expressed by Mommsen in his brilliant chapter on Cæsar (*R. G.*, iii. 446 sq.). Too much stress must not be laid on the gossip retailed by Suetonius as to Cæsar's early intentions.

⁸ Cicero vividly expresses the revulsion of feeling produced by Cæsar's energy, humanity, and moderation on his first appearance in Italy. Compare *Ad Att.*, vii. 11, with *Ad Att.*, viii. 13.

pauper population in the towns, and the denudation and desolation of the country districts. His strong hand carried out the scheme so often proposed by the popular leaders since the days of Gaius Gracchus, the colonization of Carthage and Corinth. Allotments of land on a large scale were made in Italy; decaying towns were reinforced by fresh drafts of settlers; on the large estates and cattle farms the owners were required to find employment for a certain amount of free labour; and a slight and temporary stimulus was given to Italian industry by the reimposition of harbour dues upon foreign goods.¹ To these measures must be added his schemes for the draining of the Fucine Lake and the Pomptine Marshes, for a new road across the Apennines, and for turning the course of the Tiber.² It is true that these vigorous efforts to revive the agrarian prosperity of Italy were made along the old lines laid down eighty years before by the Gracchi, and that their final success was no greater than that of preceding efforts in the same direction, but they are a proof of the spirit in which Cæsar understood the responsibilities of absolute power, and their failure was due to causes which no legislation could remove. The reform of the calendar, which has been described elsewhere,³ completes a record of administrative reform which entitles Cæsar to the praise of having governed well, whatever may be thought of the validity of his title to govern at all. But how did Cæsar deal with what was after all the greatest problem which he was called upon to solve, the establishment of a satisfactory government for the empire? One point indeed was already settled—the necessity, if the empire was to hold together at all, of placing the army, the provinces, and the control of the foreign policy in more vigorous hands than those of a number of changing magistrates independent of each other, and only very imperfectly controlled by the senate at home. Some centralization of the executive authority was indispensable, and this part of his work Cæsar thoroughly performed. From the moment when he seized the moneys in the treasury on his first entry into Rome⁴ down to the day of his death he recognized no other authority but his throughout the empire. He alone directed the policy of Rome in foreign affairs; the legions were led, and the provinces governed, not by independent magistrates, but by his “legates;”⁵ and the title “imperator” which he adopted was intended to express the absolute and unlimited nature of the “imperium” he claimed, as distinct from the limited spheres of authority possessed by republican magistrates.⁶ In so centralizing the executive authority over the empire at large, Cæsar was but developing the policy implied in the Gabinian and Manilian laws, and the precedent he established was closely followed by his successors. It was otherwise with the more difficult question of the form under which this new executive authority should be exercised and the relation it should hold to the republican constitution. We must be content to remain in ignorance of the precise shape which Cæsar intended ultimately to give to the new system. The theory that he contemplated a revival of the old Roman kingship⁷ is supported by little more than the popular gossip of the day, and the form under which he actually

wielded his authority can hardly have been regarded by so sagacious a statesman as more than a provisional arrangement. This form was that of the dictatorship; and in favour of the choice it might have been urged that the dictatorship was the office naturally marked out by republican tradition as the one best suited to carry the state safely through a serious crisis, that the powers it conveyed were wide, that it was as dictator that Sulla had reorganized the state, and that a dictatorship had been spoken of as the readiest means of legalizing Pompey's protectorate of the republic in 53–52. The choice nevertheless was a bad one. It was associated with those very Sullan traditions from which Cæsar was most anxious to sever himself; it implied necessarily the suspension for the time of all constitutional government; and, lastly, the dictatorship as held by Cæsar could not even plead that it conformed to the old rules and traditions of the office. There was indeed a precedent in Sulla's case for a dictator “reipublicae constituendae causa,” but Cæsar was not only appointed in an unusual manner, but appointed for an unprecedentedly long period,⁸ and the “perpetual dictatorship” granted him after his crowning victory at Munda (45) was a contradiction in terms and a repudiation of constitutional government which excited the bitterest animosity.⁹ The dictatorship served well enough for the time to give some appearance of legality to Cæsar's autocratic authority, but it was not—even, it is probable, in his own eyes—a satisfactory solution of the problem.

A second question, hardly less important than the establishment and legalization of a strong central executive authority over the army and the provinces, was that of the position to be assigned to the old constitution, by the side of this new power. So far as Cæsar himself was concerned, the answer was for the time sufficiently clear. The old constitution was not formally abrogated. The senate met and deliberated; the assembly passed laws and elected magistrates; there were still consuls, prætors, ædiles, quæstors, and tribunes; and Cæsar himself, like his successors, professed to hold his authority by the will of the people. But senate, assembly, and magistrates were all alike subordinated to the paramount authority of the dictator; and this subordination was, in appearance at least, more direct and complete under the rule of Cæsar than under that of Augustus. Cæsar was by nature as impatient as Augustus was tolerant of established forms; and, dazzled by the splendour of his career of victory and by his ubiquitous energy and versatility, the Roman public, high and low, prostrated themselves before him and heaped honours upon him with a reckless profusion which made the existence of any authority by the side of his own an absurdity.¹⁰ Hence under Cæsar the old constitution was repeatedly disregarded, or suspended in a way which contrasted unfavourably with the more respectful attitude assumed by Augustus. For months together Rome was left without any regular magistrates, and was governed like a subject town by Cæsar's prefects.¹¹ At another time a tribune was seen exercising authority outside the city bounds and invested with the “imperium” of a prætor.¹² At the elections, candidates appeared before

⁴ Plut., 35.

⁵ Dio, xliii. 47.

⁶ Suet., 40; Dio, xliii. 44. For this use of the title “imperator,” see Mommsen, *R. G.*, iii. 466, and note.

⁷ See Mommsen, iii. 467, and Ranke, *Weltgeschichte*, ii. 319 sq. According to Appian, ii. 110, and Plutarch, *Cæs.*, 64, the title “rex” was only to be used abroad in the East, as likely to strengthen Cæsar's position against the Parthians.

⁸ Cæsar's first dictatorship in 49 was simply “comitiorum habendum causa,” and lasted only eleven days. He was appointed dictator again for one year in 48, for ten years in 46, and for life in 45.

⁹ Cicero, *Phil.*, i. 2, praises Antony, “quum dictatoris nomen . . . propter perpetuae dictaturae recentem memoriam funditus ex republica sustulisset.”

¹⁰ For the long list of these, see Appian, ii. 106; Dio, xliii. 43–45; Plut., 57; Suet., 76. Cf. also Mommsen, *R. G.*, iii. 463 sq.; Watson, *Cicero's Letters*, App. x.; Zumpt, *Studia Romana*, 199 sq. (Berlin, 1859).

¹¹ Zumpt, *Stud. Rom.*, 241; Suet., 76. ¹² Cic. *Ad Att.*, x. 8a.

the people backed by a written recommendation from the dictator, which was equivalent to a command.¹ Finally, the senate itself was transformed out of all likeness to its former self by the raising of its numbers to 900, and by the admission of old soldiers, sons of freedmen, and even "semi-barbarous Gauls."² But, though Caesar's high-handed conduct in this respect was not imitated by his immediate successors, yet the main lines of their policy were laid down by him. These were (1) the municipalization of the old republican constitution, and (2) its subordination to the paramount authority of the master of the legions and the provinces. In the first case he only carried further a change already in progress. Of late years the senate had been rapidly losing its hold over the empire at large. Even the ordinary proconsuls were virtually independent potentates, ruling their provinces as they chose, and disposing absolutely of legions which recognized no authority but theirs. The consuls and prætors of each year had since 81 been stationed in Rome, and immersed in purely municipal business; and, lastly, since the enfranchisement of Italy, the comitia, though still recognized as the ultimate source of all authority, had become little more than assemblies of the city populace, and their claim to represent the true Roman people was indignantly questioned, even by republicans like Cicero. The concentration in Caesar's hands of all authority outside Rome completely and finally severed all real connection between the old institutions of the republic of Rome and the government of the Roman empire. And, though Augustus and Tiberius elevated the senate to a place beside themselves in this government, its share of the work was a subordinate one, and it never again directed the policy of the state; while, from the time of Caesar onwards, the old magistracies are merely municipal offices, with a steadily diminishing authority, even in the city, and the comitia retain no other prerogative of imperial importance but that of formally confirming the ruler of the empire in the possession of an authority which is already his. But the institutions of the republic not merely became, what they had originally been, the local institutions of the city of Rome; they were also subordinated even within these narrow limits to the paramount authority of the man who held in his hands the army and the provinces. And here Caesar's policy was closely followed by his successors. Autocratic abroad, at home he was the chief magistrate of the commonwealth; and this position was marked, in his case as in that of those who followed him, by a combination in his person of various powers, and by a general right of precedence which left no limits to his authority but such as he chose to impose upon himself. During the greater part of his reign he was consul as well as dictator.³ In 48, after his victory at Pharsalia, he was given the "tribunicia potestas" for life,⁴ and after his second success at Thapsus the "præfectura morum" for three years.⁵ As chief magistrate he convenes and presides in the senate, nominates candidates, conducts elections, carries laws in the assembly, and administers justice in court.⁶ Finally, as a reminder that the chief magistrate of Rome was also the autocratic ruler of the empire, he wore even in Rome the laurel wreath and triumphal dress, and carried the sceptre of the victorious imperator.⁷

Nor are we without some clue as to the policy which

Cæsar had sketched out for himself in the administration of the empire, the government of which he had centralized in his own hands. The much-needed work of rectifying the frontiers he was forced, by his premature death, to leave to other hands, but our authorities agree in attributing to him the design of extending the rule of Rome to its natural geographical limits⁸—to the Euphrates and the Caucasus on the east, to the Danube and the Rhine or possibly the Elbe on the north, and to the ocean on the west. Within the frontiers he anticipated Augustus in lightening the financial burdens of the provincials,⁹ and in establishing a stricter control over the provincial governors,¹⁰ while he went beyond him in his desire to consolidate the empire by extending the Roman franchise¹¹ and admitting provincials to a share in the government.¹² He completed the Romanization of Italy by his enfranchisement of the Transpadane Gauls,¹³ and by establishing throughout the peninsula a uniform system of municipal government, which under his successors was gradually extended to the provinces.¹⁴

On the eve of his departure for the East, to avenge the death of Crassus and humble the power of Parthia, Cæsar fell a victim to the wounded pride of the republican nobles; and between the day of his death (March 15, 44) and that on which Octavian defeated Antony at Actium (September 2, 31) lies a dreary period of anarchy and bloodshed.¹⁵

For a moment, in spite of the menacing attitude of Cæsar's self-constituted representative Antony, it seemed to one man at least as if the restoration of republican government was possible. With indefatigable energy Cicero strove to enlist the senate, the people, and above all the provincial governors in support of the old constitution. But, though his eloquence now and again carried all before it in senate house and forum, it was powerless to alter the course of events. By the beginning of 43 civil war had recommenced; in the autumn Antony was already threatening an invasion of Italy at the head of seventeen legions. Towards the end of October Antony and his ally Lepidus coalesced with the young Octavian, who had been recently elected consul at the age of twenty, in spite of senatorial opposition; and the coalition was legalized by the creation of the extraordinary commission for the "reorganization of the commonwealth" known as the "second triumvirate."¹⁶ It was appointed for a period of five years, and was continued in 37 for five years more.¹⁷ The rule of the triumvirs was inaugurated in the Sullan fashion, and, in marked contrast to the lenity shown by Cæsar, by a proscription, foremost among the victims of which was Cicero himself.¹⁸ In the next year the defeat of Brutus and Cassius at Philippi, by the combined forces of Octavian and Antony, destroyed the last hopes of the republican party.¹⁹ In 40 a threatened rupture between the two victors was avoided by the treaty concluded at Brundisium. Antony married Octavian's sister Octavia,

and took command of the eastern half of the empire; Octavian appropriated Italy and the West; while Lepidus was forced to content himself with Africa.¹ For the next twelve years, while Antony was indulging in dreams of founding for himself and Cleopatra an empire in the East, and shocking Roman feeling by his wild excesses and his affectation of oriental magnificence,² Octavian was patiently consolidating his power. Of his only two rivals, Lepidus his fellow triumvir was in 36 ejected from Africa and banished to Circeii, while Sextus Pompeius, who had since his defeat at Munda maintained a semi-piratical ascendancy in the western Mediterranean, was decisively defeated in the same year, and his death in 35 left Octavian sole master of the West. The inevitable trial of strength between himself and Antony was not long delayed. In 32 Antony inflicted one more outrage upon Roman feeling, and openly challenged the hostility of Octavian by divorcing Octavia in favour of the beautiful and daring Egyptian princess, with whom, as the heiress of the Ptolemies, he aspired to share the empire of the Eastern world. By a decree of the senate Antony was declared deposed from his command, and war was declared against Queen Cleopatra.³ On September 2, 31, was fought the battle of Actium.⁴ Octavian's victory was complete. Antony and Cleopatra committed suicide (30), and the Eastern provinces submitted in 29. Octavian returned to Rome to celebrate his triumph and mark the end of the long-continued anarchy by closing the temple of Janus;⁵ at the end of the next year he formally laid down the extraordinary powers he had held since 43, and a regular government was established.

III. The Empire.

PERIOD I.: THE PRINCIPATE, 27 B.C.—284 A.D.—(a) *The Constitution of the Principate*.—The conqueror of Antony at Actium, the great-nephew and heir of the dictator Cæsar, was now summoned, by the general consent of a world wearied out with twenty years of war and anarchy,⁶ to the task of establishing a government which should as far as possible respect the forms and traditions of the republic, without sacrificing that centralization of authority which experience had shown to be necessary for the integrity and stability of the empire. It was a task for which Octavian was admirably fitted. To great administrative capacity and a quiet tenacity of purpose he united deliberate caution and unflinching tact; while his bourgeois birth⁷ and genuinely Italian sympathies enabled him to win the confidence of the Roman community to an extent impossible for Cæsar, with his dazzling pre-eminence of patrician descent, his daring disregard of forms, and his cosmopolitan tastes.

The new system which was formally inaugurated by Octavian in 28–27 B.C.⁸ assumed the shape of a restoration of the republic under the leadership of a “princeps.”⁹

⁹ Tac., *Ann.*, iii. 28, “sexto demum consulatu . . . quæ mirratu jusserat abolivit, deditque jura quis pace et principe uteretur;” *ibid.*, i. 9, “non regno neque dictatura sed principis nomine constitutam rempublicam.”

Octavian voluntarily resigned the extraordinary powers which he had held since 43, and, to quote his own words, “handed over the republic to the control of the senate and people of Rome.”¹⁰ The old constitutional machinery was once more set in motion; the senate, assembly, and magistrates resumed their functions¹¹; and Octavian himself was hailed as the “restorer of the commonwealth and the champion of freedom.”¹² It was not so easy to determine what relation he himself, the actual master of the Roman world, should occupy towards this revived republic. His abdication, in any real sense of the word, would have simply thrown everything back into confusion. The interests of peace and order required that he should retain at least the substantial part of his authority;¹³ and this object was in fact accomplished, and the rule of the emperors founded, in a manner which has no parallel in history. Any revival of the kingly title was out of the question, and Octavian himself expressly refused the dictatorship.¹⁴ Nor was any new office created or any new official title invented for his benefit. But by senate and people he was invested according to the old constitutional forms with certain powers, as many citizens had been before him, and so took his place among the lawfully appointed magistrates of the republic;—only, to mark his pre-eminent dignity, as the first of them all, the senate decreed that he should take as an additional cognomen that of “Augustus,”¹⁵ while in common parlance he was henceforth styled “princeps,” a simple title of courtesy, familiar to republican usage, and conveying no other idea than that of a recognized primacy and precedence over his fellow citizens.¹⁶ The ideal sketched by Cicero in his *De Republica*, of a constitutional president of a free republic, was apparently realised; but it was only in appearance. For in fact the special prerogatives conferred upon Octavian gave him back in substance the autocratic authority he had resigned, and as between the restored republic and its new princeps the balance of power was overwhelmingly on the side of the latter.

Under one form or another Octavian had held the “imperium” since 43, and in 33 he had been formally acknowledged as “imperator,” by the consent of all.¹⁷ For this somewhat irregular authority was substituted in 27 the regular “proconsulare imperium,”¹⁸ the authority under which for nearly two centuries the provinces had been governed and the legions led to war. He received it in the orthodox way, by decree of the senate; and the decree, as was customary, defined the area of his command. The essential difference between the “proconsulare imperium” granted to Octavian and that which had been voted year after year to the ordinary proconsuls, lay in its unprecedentedly wide extent and in its long duration. All the provinces, with the exception of those where no military authority or force was required, were placed under his command, to be governed directly by “legati” appointed by him and responsible only to him.¹⁹ The “unarmed

¹⁰ *Mon. Ancy.*, vi. 13.

¹¹ Vell. Pat., ii. 89, “prisca et antiqua reipublicæ forma revocata.”

¹² Ovid, *Fasti*, i. 589. On a coin of Asia Minor Augustus is styled “libertatis P. R. vindex.” Compare, for other evidence, Mommsen, *Staatsr.*, ii. 708, note 1.

¹³ Dio Cassius describes Augustus as seriously contemplating abdication (lii. 1; liii. 1–11); cf. Suet., *Aug.*, 28.

¹⁴ Suet., 52; *Mon. Ancy.*, i. 31. ¹⁵ *Mon. Ancy.*, vi. 16, 21, 23.

¹⁶ The explanation of “princeps” as an abbreviated form of “princeps senatus” is quite untenable. For its real significance, see Mommsen, *Staatsrecht*, ii. 733; Pelham, *Journ. of Phil.*, vol. viii. It is not an official title.

¹⁷ *Mon. Ancy.*, v. 3–6, vi. 13, 14. Augustus adopted “imperator” as a prænomen in 40. Mommsen, *Staatsr.*, ii. 727, note 2.

¹⁸ Dio, liii. 17, 32; Mommsen, *Staatsr.*, 791.

¹⁹ Dio, liii. 12; Suet., 47, “provincias validiores ipse suscepit, ceteras proconsulibus sortito permisit.”

provinces" were to be assigned by lot in the old way to ex-consuls and ex-prætors, and to be nominally under the control of the senate; but in 23 even their governors were declared to be generally subordinate to Octavian as the holder of a higher authority ("majus imperium").¹ In addition to this control, direct and indirect, of all the provinces, Octavian received also the sole and supreme command of all the military and naval forces of the empire. He alone henceforth levies, pays, and dismisses soldiers, equips fleets, and orders the movements of both army and navy, and he was granted in addition full authority to wage war and conclude treaties with whom he would.² Finally, in 23, if not in 27, he was exempted from the law which required the proconsul to lay down his "imperium" on entering Rome, and was allowed to exercise it within the sacred limits of the pomerium,³ a privilege which facilitated the introduction into the city of the præfects, prætorian guard, and summary jurisdiction proper to the proconsul in the province. This "proconsulare imperium" was granted in the first instance for ten years,⁴ but was renewed for periods of five, five, and ten years successively, and the fiction of its temporary duration and periodic renewal was maintained under Augustus's successors by the celebration every ten years of the "decennalia."⁵ The supreme importance attached to its possession as the mainstay of the imperial power is sufficiently indicated by the fact that the man on whom it is conferred becomes thereby "princeps," and the day on which he receives it ("dies imperii") marks the beginning of his reign.⁶

The proconsular imperium not only carried with it the control of the army and the provinces, but in Rome itself it gave its holder a position of precedence. In virtue of it he took his seat between the consuls, was preceded by lictors,⁷ and wore the laurel wreath, paludamentum, and sword of the emperor. But as yet Rome could not be governed like a subject provincial city by proconsular authority; and, for the necessary direction and regulation of the constitutional machinery which he had restored, Augustus contented himself⁸ with the authority which traditionally invested its holder with a popular leadership, that of the tribunes of the plebs. The "tribunicia potestas" had been granted him for life in 36,⁹ and his tenure of it was confirmed in 23.¹⁰ Thenceforward it ranked as a constituent element of the principate, second in importance only to the proconsular authority. With but few exceptions it was conferred for life upon all succeeding emperors, and the years of their reigns are reckoned by the years of their tribunician power. It was conferred, as all special "potestas" had been conferred under the republic, by a decree of the senate and vote of the assembly.¹¹ It gave its holder all the prerogatives of

the tribunate, without the restrictions which hampered the tribunes themselves. Augustus and his successors were unimpeded in its exercise by the presence of colleagues; and both their personal inviolability and their right of interference held good outside the pomerium. It enabled them, as representing the acknowledged protectors of the plebs, to control in the name of the people the whole administrative machinery, to introduce laws, to convene the senate, to protect the aggrieved, and to interfere with any exercise of authority by other magistrates. In short, it gave to the man who already wielded an authority abroad more absolute than that granted to Pompey by the Gabinian law all and more than all the power possessed by a Gracchus in Rome.

It was on these two powers that Augustus's position as Other princeps rested. In virtue of these he was chief magistrate powers of the Roman state, and all other offices and privileges conferred upon him are comparatively of secondary importance. The consulship which he held continuously from 31 up to 23 he never accepted again but on two occasions, in 5 B.C. and in 2 B.C.,¹² though he was twice invested with "consular authority" for the purpose of taking the census (8 B.C., 14 A.D.).¹³ That he ever received an extraordinary "morum legumque regimen," as stated by Suetonius and Dio,¹⁴ is extremely doubtful, and his language in the Ancyran monument implies that for this purpose, as for many others, he found the tribunician authority sufficient.¹⁵ In 22 B.C. he was invested with the "cura annonæ,"¹⁶ the supervision of the corn supply and the corn largesses at Rome. On the death of Lepidus in 12 742. B.C. he succeeded him as "pontifex maximus," and he was also a member of the augural and other priestly colleges.¹⁷ Lastly, at various times, and probably by decree of the senate, he was granted a number of special exemptions and privileges.¹⁸

In theory at least, the Roman world was governed Changes according to the "maxims of Augustus" down to the time of Diocletian. Even in the 3d century there is still, in name at least, a republic, of which the emperor is in strictness only the chief magistrate, deriving his authority from the senate and people, and with prerogatives limited and defined by law. The case is quite different when we turn from the theory to the practice. The division of authority between the republic and its chief magistrate became increasingly unequal. Over the provinces the princeps from the first ruled autocratically; and this autocracy reacted upon his position in Rome, so that it became every year more difficult for a ruler so absolute abroad to maintain even the fiction of republican government at home. The republican institutions, with the partial exception of the senate, lose all semblance of authority outside Rome, and even in their altered position as the municipal institutions of the chief city of the empire they retain but little actual power. The real government even of Rome passes gradually into the hands of imperial præfects and commissioners, and the old magistracies become merely decorations which the emperor gives away at his pleasure. And at the same time the rule of the princeps assumes an increasingly personal character, and the whole work of government is silently concentrated in his hands and in those of his own subordinate officials. Closely connected with this change is the different aspect presented by the history of the empire in Rome and Italy on

the one hand and in the provinces on the other. Rome and Italy share in the decline of the republic. Political independence and activity die out; their old pre-eminence and exclusive privileges gradually disappear; and at the same time the weight of the overwhelming power of the princeps, and the abuses of their power by individual "princes," press most heavily upon them. On the other hand, in the provinces and on the frontiers, where the imperial system was most needed, and where from the first it had full play, unfettered by the fictions of republican government, it is seen at its best as developing or protecting an orderly civilization and maintaining the peace of the world.

Decay
of re-
publican
institu-
tions.
705, 726.

The
comitia.

The decay of the republican institutions had commenced before the revolutionary crisis of 49. It was accelerated by the virtual suspension of all regular government between 49 and 28; and not even the diplomatic deference towards ancient forms which Augustus displayed availed to conceal the unreality of his work of restoration. The "comitia" received back from him "their ancient rights,"¹ and during his lifetime they continued to pass laws and to elect magistrates. But after the end of the reign of Tiberius we have only two instances of legislation by the assembly in the ordinary way,² and the law-making of the empire is performed either by decrees of the senate or by imperial edicts and constitutions. Their prerogative of electing magistrates was, even under Augustus, robbed of most of its importance by the control which the princeps exercised over their choice by means of his rights of nomination and commendation, rights which effectually secured the election of his own nominees.³ By Tiberius even this restricted prerogative was still further curtailed. The candidates for all magistracies except the consulship were thenceforward nominated and voted for in the senate-house and by the senators,⁴ and only the "renuntiatio," the formal return of the result, and the introduction of the magistrates designate to the people took place in the assembly.⁵ And, though the election of consuls was never thus transferred to the senate, the process of voting seems to have been silently abandoned. In the time of the younger Pliny we hear only of the nomination of the candidates and of their formal "renuntiatio" in the Campus Martius.⁶ By this empty form the ancient right of the people to confer all magisterial authority was saved, at least in appearance; and it was acknowledged in as purely formal a manner in the case of the princeps himself, who, as long as the principate lasted, continued to receive the "tribunicia potestas" by a vote of the assembly, and was thus held to derive his authority from the people.⁷

The
magis-
tracies.

This almost complete effacement of the "comitia" was largely due to the fact that they had ceased to represent anything but the populace of Rome, and the comparatively greater vitality shown by the old magistracies is mainly attributable to the value they continued to possess in the eyes of the Roman upper class. But, though they were

¹ Suet., *Aug.*, 40, "comitiorum pristinum jus reduxit."

² The "plebiscita" of Claudius, Tac., *Ann.*, xi. 13, 14, and the "lex agraria" of Nerva; *Digest*, xlvii. 21, 3; Dio, lxxviii. 2; Plin., *Epp.*, vii. 31.

³ For the nature of these rights, the latter of which was not exercised in the case of the consulship until the time of Vespasian, see Mommsen, *Staatsr.*, ii. 861-869; Tac., *Ann.*, i. 14, 15, 81; Suet., *Aug.*, 56; Dio, lxxviii. 20.

⁴ Tac., *Ann.*, i. 15, "comitia e campo ad patres translata sunt"; compare *Ann.*, xiv. 28. The magistracy directly referred to is the praetorship, but that the change affected the lower magistracies also is certain; see, e.g., Pliny's *Letters*, *passim*, especially iii. 20, vi. 19.

⁵ Dio, lxxviii. 20.

⁶ Mommsen, *Staatsr.*, ii. 865, 866; Plin., *Paneg.*, 92.

⁷ Gaius, i. 5, "cum ipse imperator per legem imperium accipiat." Mommsen is probably right in referring this to the "lex tribunicia."

eagerly sought,⁸ and conferred on their holders considerable social distinction, the magistrates ceased, except in name, to be the popularly chosen executive officers of the Roman state. In the administration of the empire at large they had no share, if we except the subordinate duties still assigned to the quaestor in a province. In Rome, to which their sphere of work was limited, they were overshadowed by the dominant authority of the princeps, while their range of duties was increasingly circumscribed by the gradual transference of administrative authority, even within the city, to the emperor and his subordinate officials. And their dependence on the princeps was confirmed by the control he exercised over their appointment. For all candidates the approval, if not the commendation, of the princeps became the indispensable condition of success, and the princeps on his side treated these ancient offices as pieces of preferment with which to reward his adherents or gratify the ambition of Roman nobles. In all instances, too, the dignity of the office was impaired by the practice, begun by Caesar and continued by Augustus and his successors, of granting the insignia to men who had not held the actual magistracy itself.⁹ The change is especially noticeable in the case of the consuls, the chief magistrates of the old commonwealth. The consulship was still the highest post open to the private citizen,¹⁰ and consular rank a necessary qualification for high office in the provinces;¹¹ but the actual consuls have scarcely any other duties than those of presiding in the senate, conducting its proceedings, and occasionally executing its decrees,¹² while their term of office dwindles from a year to six and finally to two months.¹³ In the age of Tacitus and the younger Pliny, the contrast is striking enough between the high estimate set on the dignity of the office and the frankness with which both its limited powers and its dependence on the emperor are acknowledged.¹⁴ Of the other magistrates the praetors continued to exercise their old jurisdiction with little formal change down at least to the latter half of the second century, but only as subordinate to the higher judicial authority of the emperor.¹⁵ The aediles seem to have retained only such petty police duties as did not pass to one or another of the numerous imperial prefects and commissioners.¹⁶ The tribunate fared still worse, for, by the side of the tribunicia potestas wielded by the princeps, it sank into insignificance, and it is described by the younger Pliny as a "shadow and an empty name."¹⁷ The quaestorship

⁸ Plin., *Epp.*, ii. 9, vi. 6. See, generally, Friedlaender, *Sitten-geschichte Roms* (Leipzig, 1869), pp. 227 sq.

⁹ The permission to use the "ornamenta consularia, praetoria," &c., was distinct from the "adlectio inter consulares, praetorios," &c. See Mommsen, *Staatsr.*, ii. 877 sq.; Suet., *Jul.*, 76; Claud., v. 24; Tac., *Ann.*, xii. 21, xv. 72; Dio Cass., lx. 8. Cf. also Friedlaender, i. 224.

¹⁰ Tac., *Agric.*, 44; Pliny, *Epp.*, ii. 1, "summum fastigium privati hominis."

¹¹ For a consular senatorial province and for the more important of the imperial legateships.

¹² Plin., *Paneg.*, 48, graphically sums up the consuls' duties.

¹³ Mommsen, *Staatsr.*, ii. 79. Six months was the usual term down to the death of Nero; we have then four or two months; in the 3d century two is the rule. The consuls who entered on office on January 1 were styled "consules ordinarii," and gave their name to the year. Seneca *De Ira*, iii. 31, "a me numerari voluit annum." Lucan, *Phars.*, v. 398, "carcat ne nomine tempus, monstrum in fastos distinguet saecula consul." Plin., *Paneg.*, 58. The others were distinguished as "consules suffecti" or "minores"; Dio Cass., lxxviii. 35.

¹⁴ Plin., *Paneg.*, 92; Tac., *Hist.*, i. 1; *Agric.*, 44.

¹⁵ Mommsen, *Staatsr.*, ii. 206.

¹⁶ They lost the "cura annonae" and "cura ludorum" as well as other duties, which passed to such officers as the "praefectus vigilum," and the "curatores viarum, cloacarum," &c. There is no mention of the aedileship after the reign of Severus Alexander.

¹⁷ Plin., *Epp.*, i. 23, "inanem umbram et sine honore nomen." There are a few instances of the exercise by the tribunes of their power of interference within the senate; Tac., *Ann.*, i. 77, vi. 47, xvi. 26; Plin., *Epp.*, ix. 13.

suffered perhaps less change than any other of the old offices. It still kept its place as the first step on the ladder of promotion, and there was still a quaestor attached to each governor of a senatorial province, to the consuls in Rome, and to the princeps himself as proconsul.¹

The
senate.

The senate alone among republican institutions retained some importance and influence. The virtual abolition of the comitia, and the degradation of the magistracies left the senate to stand alone as the representative of republicanism, and it thus came to be regarded as sharing the government of the empire with the princeps himself. The magistrates elected by the senate are contrasted with the legates, prefects, and procurators appointed by the emperor. It is to the senate, in theory, that the supreme power reverts in the absence of a princeps. It is by decree of the senate that the new princeps immediately receives his powers and privileges,² though he is still supposed to derive them ultimately from the people, and is as a rule actually the nominee of the soldiers. After the cessation of all legislation by the comitia, the only law-making authority, other than that of the princeps by his edicts, was that of the senate by its decrees.³ Its judicial authority was parallel with that of the emperor, and at the close of the 1st century we find the senators claiming, as the emperor's "peers," to be exempt from his jurisdiction.⁴ But in spite of the outward dignity and importance of this position, and of the politic deference with which it was frequently treated, the senate became gradually almost as powerless in reality as the comitia and the magistracies. The two great supports of its authority under the republic—its identification with the interests of a powerful aristocracy and the subserviency of the magistrates—both fell away under the empire.

The senators continued indeed to be taken as a rule from the ranks of the wealthy, and a high property qualification was established by Augustus as a condition of membership, but any effect which this may have had in giving independence to the position of a senator was counterbalanced by the facilities it afforded to the emperors for securing their own ascendancy by subsidizing those whose property fell short of the required standard, and who thus became simply the paid creatures of their imperial patrons.⁵ Admission to the senate was possible only by favour of the emperor, as at once controlling the elections to the magistracies, which still as of old gave entrance to the curia, and as invested with the power of directly creating senators by "adlectio," a power which from the time of Vespasian onwards was freely used.⁶ As the result, the composition of the senate rapidly altered. Under Augustus and Tiberius it still contained many representatives of the old republican families, whose prestige, influence, and ancestral traditions were some guarantee for their independence. But this element soon disappeared. The ranks of the old nobility were thinned by natural decay and by the jealous fears of the last three Claudian emperors. Vespasian⁷ flooded the senate with new men from the municipal towns of Italy and the Latinized provinces of the West. Trajan and Hadrian, both pro-

vincials themselves, carried on the same policy, and by the close of the 2d century even the Greek provinces of the East had their representatives among the senators of Rome. Some, no doubt, of these provincials, who constituted the great majority of the senate in the 3d century, were men of wealth and mark, but many more were of low birth, on some rested the stain of a servile descent, and all owed alike their present position and their chances of further promotion to the emperor.⁸ The procedure of the senate was as completely at the mercy of the princeps as its composition. He was himself a senator and the first of senators;⁹ he possessed the magisterial prerogatives of convening the senate, of laying business before it, and of carrying *senatus consulta*;¹⁰ above all, his tribunician power enabled him to interfere at any stage, and to modify or reverse its decisions. The share of the senate in the government was in fact determined by the amount of administrative activity which each princeps saw fit to allow it to exercise, and by the extent to which he chose to use it as an instrument of government. And this share became steadily smaller. The jurisdiction assigned it by Augustus and Tiberius was in the 3d century limited to the hearing of such cases as the emperor thought fit to send for trial, and these became steadily fewer in number. Its control of the state treasury, as distinct from the imperial *fiscus*, and of the so-called senatorial provinces passed in fact to the emperor and his officials, and was only occasionally revived by the special favour of emperors who, like Marcus Aurelius,¹¹ were sincerely attached to old traditions, or, like Severus Alexander and Tacitus, hoped by close alliance with the senate to escape from the evils of a military despotism.¹² Even in Rome and Italy its control of the administration was gradually transferred to the prefect of the city, and after the reign of Hadrian to imperial officers (*juridici*) charged with the civil administration.¹³ The part still played by its decrees in the modification of Roman law has been dealt with elsewhere (see p. 704 *supra*), but it is clear that these decrees did little else than register the expressed wishes of the emperor and his personal advisers.

The growing impotence of all other authority than that of the princeps inevitably altered the character of the principate. Even under Augustus, Tiberius, and the Claudian emperors, there is a silent and steady concentration of all authority in the hands of the princeps; not only the army and the provinces, but even Rome and Italy, are in reality governed by him, though still with a lingering respect for the traditional prerogatives of the senate and the senatorial magistrates; in the reigns of Caligula, Claudius, and Nero the politic disguise under which Augustus and Tiberius had endeavoured to conceal the extent of their power was thrown contemptuously aside. In the administration of justice and in finance, as well as in military and foreign affairs, the authority of the princeps is paramount; and his own personal subordinates—legates, prefects, procurators, and even his freedmen¹⁴—divide between them the real work of government. This increase of power was accompanied by a corresponding elevation of the princeps himself above the level of all other citizens. The comparatively modest household and simple life of Augustus were replaced by a more

than regal splendour, and under Nero we find all the outward accessories of monarchy present, the palace, the palace guards, the crowds of courtiers, and a court ceremonial. In direct opposition to the republican theory of the principate, the members of the princeps's family share in the dignities of his position. The males bear the cognomen of Cæsar, and are invested, as youths, with high office; their names and even those of the females are included in the yearly prayers for the safety of the princeps¹; their birthdays are kept as festivals; the prætorian guards take the oath to them as well as to the princeps himself. Finally, the growing practice of Cæsar worship invested the chief magistrate of the Roman commonwealth with the divine attributes ascribed to Eastern monarchs.² The death of Nero was followed, it is true, by a partial reaction. Not only Galba and the Flavian emperors but Trajan, Hadrian, and the Antonines at once affected a certain simplicity in their personal habits, and discountenanced the excessive servility and adulation encouraged by Caligula and Nero. But this reaction served only to bring into clearer relief the continued advance made towards the establishment of an autocratic and military rule. Caligula, Claudius, and Nero were all first saluted as imperatores by the soldiery and then invested with their powers by the senate,³ but this reversal of the constitutional order was rendered less noticeable by the fact that the choice was still made in Rome, and that it fell in each case on one whose birth already marked him out as the natural successor to the purple. The salutation of Galba by the legions in Spain marks the opening of a new epoch.⁴ Thenceforward, if the legions do not actually select the princeps, it is their acceptance of him which is the one essential condition of his tenure of power, and it is on their support that he relies. Vitellius and Vespasian were chosen by the legions of Germany and Syria, as Galba had been by those of Spain. Domitian emphasized the military character of his rule by entering the senate in the triumphal dress;⁵ and under the great soldier Trajan, whose adoption by Nerva was a frank confession of the necessities of the case, the military title "imperator" was already superseding the older and more constitutional "princeps."

Closely connected with the increasingly military character of the emperor's position was the gradual severance of the old ties which connected the emperor, as chief magistrate, with Rome, as the traditional seat and centre of political power. Galba, Vitellius, and Vespasian were already *de facto* emperors when they entered Rome from their distant provinces to claim the legal confirmation by the senate. Trajan and Hadrian were both provincials by birth; the former did not enter Rome for a full year after his accession, and Hadrian courteously apologized to the senate for taking up the imperium in Syria before his acceptance by that body.⁶ The connexion between the emperors and Rome was further weakened by the increasing frequency and length of their absences from the city. Life in Rome was no doubt irksome to men trained in camps, as Trajan had been, and the state of affairs was such as imperatively to require the emperor's presence in the provinces and on the frontiers. The distant campaigns of Trajan and Marcus Aurelius, and the unwearying travels of Hadrian, were necessary for the safety and good government of the empire, but they involved the removal from

Rome of the real seat of government. The emperors from Vespasian to Aurelius were, with the exception of Domitian, ready enough to respect constitutional forms, at least in their personal intercourse with the senate, and Aurelius seems sincerely to have wished to share with the senate the overwhelming responsibilities which pressed upon him. But the improved organization of the administrative system which the times demanded was too urgent a need to be set aside out of respect for the niceties of an obsolete constitutional government; and this period is marked by the development and extension of a purely imperial system of government, the control of which was centralized in the hands of the emperor alone. The main credit of this achievement is due to Hadrian,⁷ and its immediate effect was undoubtedly to increase the effectiveness of the administration; but it accelerated the decay of local independence and energy, and thus diminished the strength of the empire. The century which separates the death of Marcus Aurelius from the accession of Diocletian (180-284) completed the destruction of the old Augustan system. Now and again, as in the case of Pertinax, of Severus Alexander, of Maximus and Balbinus, and of Tacitus, the senate succeeded in claiming for itself the selection of an emperor, but with the single exception of Severus Alexander their nominees were not more successful than Nerva in securing the necessary attachment of the legions; as a rule the emperors of the 3d century were more than ever the nominees of the soldiery, often men of obscure origin from the frontier provinces.⁸ The worst of them treated the senate with contempt and contumely, and the best of them excluded it from all share in the government. Septimius Severus, a native of Africa, set the precedent of abstaining from seeking a formal confirmation of his authority from the senate;⁹ he assumed the title of proconsul even in Rome, administered justice no longer openly in the forum but within the walls of the palace, and finally established the prefect of the prætorian guard as the officer next in power to the emperor himself. It is, moreover, on his inscriptions that the emperor is first officially styled "dominus." From the accession of Decius (249), the first of a series of able emperors sprung from the Danubian provinces, the autocratic and military character of the imperial system rapidly develops. The old distinctions between imperial and senatorial provinces, between the state treasury and the privy purse of the emperor, finally disappear. Senators are almost entirely excluded alike from the military and civil services. Under Aurelian (270-275), an able soldier and a vigorous administrator, the breach with the old traditions became complete. He anticipated Diocletian in the completely autocratic methods of his government and in the Oriental pomp and splendour with which he surrounded himself.

(b) *General History of the Empire.*—From the development of the principate of Augustus into the avowed despotism which it was the great work of Diocletian to organize and consolidate we pass to the general fortunes of the empire during this period. On the accession of Augustus, there could be little doubt as to the nature of the work that was necessary, if peace and prosperity were to be secured for the Roman world. He was called upon to justify his position by rectifying the frontiers and strengthening the frontier defences, by reforming the system of provincial government, and by reorganizing the finance; and his success in dealing with these three difficult problems is sufficiently proved

by the prosperous condition of the empire for a century and a half after his death.¹ To secure the peace which the distracted Roman world desired, it was imperatively necessary to establish on all sides of the empire really defensible frontiers; and this became possible now that for the first time the direction of the foreign policy of the state and of its military forces was concentrated in the hands of a single magistrate. To the south and west the generals of the republic, and Cæsar himself, had extended the authority of Rome to the natural boundaries formed by the African deserts and the Atlantic Ocean, and in these two directions Augustus's task was in the main confined to the organization of a settled Roman government within these limits. In Africa the client state of Egypt was formed into a separate province, and the kingdom of Numidia (25 B.C.) was incorporated with the old province of Africa. In Spain the hill-tribes of the north-west were finally subdued, and a third province, Lusitania, established.² Until the commencement of Cæsar's campaigns (58 B.C.) Roman rule in Gaul had been confined to the single southern province of Gallia Narbonensis (121-118 B.C.). Cæsar subdued the rest of the country, but the fierce struggles of the Civil War and his early death obliged him to leave to his nephew the task of organizing the conquered territory. Augustus (27 B.C.) established in addition to the "old province" the three new ones of Aquitania, Lugdunensis, and Belgica.³ Towards the north the republic had left the civilized countries bordering on the Mediterranean with only a very imperfect defence against the threatening mass of barbarian tribes above them. The result⁴ of Augustus's policy was to establish a protecting line of provinces running from the Euxine to the North Sea, and covering the peaceful districts to the south,—Moesia (6 A.D.), Pannonia (9 A.D.), Noricum (15 B.C.), Rætia (15 B.C.), and Gallia Belgica. Roman rule was thus carried up to the natural frontier lines of the Rhine and the Danube. Here, after the defeat of Varus (9 A.D.) and the abandonment of a forward policy beyond the Rhine, Augustus fixed the limits of the empire northward; his successor Tiberius recalled Germanicus, as soon as the disaster in the Silva Teutoburgensis had been avenged; and after the peace with Maroboduus, the chief of the Marcomanni on the upper Danube, in the next year (17 A.D.), the defensive policy recommended by Augustus was adopted along the whole of the northern frontier. The line of the great rivers was held by an imposing mass of troops. Along the Rhine lay the armies of Upper and Lower Germany, consisting of four legions each; eight more guarded the Danube and the frontiers of Pannonia and Moesia. The command of the troops was entrusted to imperial legates, whose posts became the most coveted prizes in the imperial service, and were not unfrequently stepping-stones to the imperial purple itself. At frequent intervals along the frontier were the military colonies, the permanent camps, and the smaller intervening "castella." Flotillas of galleys cruised up and down the rivers, and Roman roads opened communication both along the frontiers and with the seat of government in Italy.

The
East

In the East Rome had other work to do than that of erecting a barrier against a surging tide of barbarism, for here she was confronted with a well-organized and powerful state whose claims to empire were second only to her own. The conquests of Pompey (66-62 B.C.) had brought Rome face to face with Parthia on the banks of the Euphrates, the limits of Roman authority being marked by the eastern frontiers of the client states of

Pontus, Cappadocia, and Commagene, and of the newly formed province of Syria. In 54 the rash advance of Crassus beyond the Euphrates provoked the first serious collision between Rome and Parthia, and the victory at Carrhæ encouraged among the Parthians the idea of an invasion of Syria and Asia Minor, while it awakened in Rome a genuine fear of the formidable power which had so suddenly arisen in the East. Cæsar was at the moment of his death preparing to avenge the death of Crassus by an invasion of Parthia, and Antony's schemes of founding an Eastern empire which should rival that of Alexander included the conquest of the kingdom beyond the Euphrates. But on the Euphrates, as on the Rhine and the Danube, Augustus adhered to the policy which he recommended to his successors of "keeping the empire within its bounds"; and the Parthians, weakened by internal feuds and dynastic quarrels, were in no mood for vigorous action. Roman pride was satisfied by the restoration of the standards taken at Carrhæ. Four legions guarded the line of the Euphrates, and, beyond the frontiers of Pontus and Cappadocia, Armenia was established as a "friendly and independent ally."⁵

Next in importance to the rectification and defence of the frontiers was the reformation of the administrative reforms in the provinces, and the restoration of prosperity to the distracted and exhausted provinces. The most serious defect of the republican system had been the absence of any effective central control over the Roman officials outside Italy. This was now supplied by the general proconsular authority vested in the emperor. The provinces were for the first time treated as departments of a single state, while their governors, from being independent and virtually irresponsible rulers, became the subordinate officials of a higher authority.⁶ Over the "legati" and "procuratores" of the imperial provinces the control of the emperor was as complete as that of the republican proconsul over his staff in his own province. They were appointed by him, held office at his good pleasure, and were directly responsible to him for their conduct. The proconsuls of the senatorial provinces were in law magistrates equally with the princeps, though inferior to him in rank; it was to the senate that they were as of old responsible; they were still selected by lot from among the senators of consular and prætorian rank. But the distinction did not seriously interfere with the paramount authority of the emperor. The provinces left nominally to the senate were the more peaceful and settled districts in the heart of the empire, where only the routine work of civil administration was needed, and where the local municipal governments were as yet comparatively vigorous. The senatorial proconsuls themselves were indirectly nominated by the emperor through his control of the prætorship and consulship. They wielded no military and only a strictly subordinate financial authority, and, though Augustus and Tiberius, at any rate, encouraged the fiction of the responsibility of the senatorial governors to the senate, it was in reality to the emperor that they looked for direction and advice, and to him that they were held accountable. Moreover, in the case of all governors this accountability became under the empire a reality. Prosecutions for extortion ("de pecuniis repetundis"), which were now transferred to the hearing of the senate, are tolerably frequent during the first century of the empire; but a more effective check on maladministration lay in the appeal to Cæsar from the decisions of any

⁴ See especially Mommsen, *R. G.*, v. caps. 4 and 6.

⁵ Mommsen, *R. G.*, v. cap. 9. Armenia, however, long continued to be a debatable ground between Rome and Parthia,—passing alternately under the influence of one or the other.

⁶ For the provincial reforms of Augustus, see Marquardt, *Staatsverw.*, i. 402-422; Madvig, *Verf. d. R. Reichs*, ii. 7; Merivale, iv. cap. 82.

governor, which was open to every provincial, and in the right of petition. Under the Antonines, not the least laborious of the duties which devolved upon the emperor and his ministers was the daily one of hearing and deciding the innumerable cases sent up from the provinces. On the other hand, the growing frequency of imperial mandates and rescripts (see above, p. 705), dealing both with questions of general policy and with points of law, attests the close attention paid by all the better emperors to the government of the provinces and the increasing dependence of the governor on imperial guidance. Within the province Augustus curtailed the powers of legate and proconsul alike. In both cases there was a division of authority. By the side of the imperial legate was placed, as the highest financial authority, an imperial procurator, while the proconsul, in addition to the loss of all military control, was checked by the presence of the imperial officer, also styled procurator, to whom the care of the fiscal revenues was entrusted; finally, both legate and proconsul were deprived of that right of requisitioning supplies which, in spite of a long series of restrictive laws, had been the most powerful instrument of oppression in the hands of republican governors. The financial reforms of Augustus¹ are marked by the same desire to establish an equitable, orderly, and economical system, and by the same centralization of authority in the emperor's hands. The institution of an imperial census, or valuation of all land throughout the empire, and the assessment upon this basis of a uniform land tax, in place of the heterogeneous and irregular payments made under the republic, were the work of Augustus, though the system was developed and perfected by the emperors of the 2d century and by Diocletian. The land tax itself was directly collected, either by imperial officials or by local authorities responsible to them, and the old wasteful plan of selling the privilege of collection to publicani was henceforward applied only to such indirect taxes as the customs duties. The rate of the land tax was fixed by the emperor, and with him rested the power of remission even in senatorial provinces.² The effect of these reforms is clearly visible in the improved financial condition of the empire. Under the republic the treasury had been nearly always in difficulties, and the provinces exhausted and impoverished. Under the emperors, at least throughout the 1st century, in spite of a largely increased expenditure on the army, on public works, on shows and largesses, and on the machinery of government itself, the better emperors, such as Tiberius and Vespasian, were able to accumulate large sums, while the provinces show but few signs of distress. A reformed administration and an improved system of taxation were not the only boons for which the empire at large had to thank Augustus. While the republic had almost entirely neglected to develop the internal resources of the provinces, Augustus set the example of a liberal expenditure on public works, in the construction of harbours, roads, and bridges, the reclamation of waste lands, and the erection of public buildings.³ The crippling restrictions which the republic had placed on freedom of intercourse and trade, even between the separate districts of a single province, disappeared under the empire, and the institution of the provincial councils, as centres of provincial unity, is one among many instances of the more liberal policy pursued by the emperors.⁴ In the eyes of the republican statesmen the provinces were merely the estates of the Roman people, but from the reign of Augustus dates the gradual disappearance of the old pre-eminence of Rome and Italy. It was from the provinces that the

legions were increasingly recruited; provincials rose to high rank as soldiers, statesmen, and men of letters;⁵ the growing Roman civilization of the Western provinces and the thriving commerce of the populous cities of the East contrasted significantly with the degenerate cosmopolitanism of Rome, and with the dwindling population and decaying industry of Italy; while even into Rome and Italy the methods of administration formerly distinctive of the provinces found their way. From Augustus himself, jealous as he was of the traditions and privileges of the ruling Roman people, date the rule of an imperial prefect in the city of Rome, the division of Italy into regiones in the provincial fashion, and the permanent quartering there of armed troops.⁶

For a century and a half the policy initiated by Augustus secured the peace and prosperity of the empire; of the emperors who ruled during that period the majority were able and vigorous administrators, and even the follies and excesses of Gaius, Claudius, and Nero did little harm beyond the limits of Rome and Italy. The firm rule of Vespasian repaired the damages inflicted by the wars of the rival emperors after Nero's death, and the abilities of Trajan, Hadrian, and the Antonines, if they failed to revive the flagging energies of the empire, at least secured tranquillity and good government. But few additions of importance were made to the territories of Rome. In Britain the work begun by Cæsar was taken up by Claudius, under whom the southern part of the island was constituted a province; the northern districts were subdued by Agricola (78-84 A.D.), and the limits of the province northward were finally fixed by the Wall of Hadrian (see BRITANNIA). The conquest of Dacia by Trajan (107) was provoked by the threatening attitude of the barbarian tribes on the lower Danube, and, though it remained part of the empire down to 256, its exposed position as lying beyond the Danube frontier rendered it always a source of weakness rather than strength.⁷ To Trajan's reign also belongs the annexation of Arabia Petrea. Otherwise on the frontiers there was little change. In the north the revolt of Civilis (69-70 A.D.) owed its temporary success mainly to the confusion created by the rivalries of Otho, Vitellius, and Vespasian.⁸ The connexion of the Rhine with the Danube frontier by a continuous wall, a work gradually carried out under the Flavian and Antonine emperors, was a strategical necessity, and involved no general advance of the Roman lines.⁹ On the Rhine itself the peaceful state of affairs is sufficiently proved by the reduction of the force stationed there from eight legions to four; and it was only on the Danube that there was any pressure severe enough to strain the strength of the Roman defence. The presence of Trajan himself was required to quell the Dacians under their able king Decebalus, and, though his campaigns were followed by sixty years of peace, a force of ten legions was considered necessary to guard the Danubian frontier. Far more serious was the irruption of the Marcomanni and other tribes in the reign of Marcus Aurelius (162-175).¹⁰ The tide of barbaric invasion which then swept across the upper Danube and over the provinces of Rætia, Noricum, and Pannonia, till it touched the Alps and the soil of Italy, was indeed driven back after fourteen years of war, but it first revealed to the Roman world the strength of the forces

which were gathering unnoticed in the distant regions beyond the limits of the "Roman peace." In the East Rome and Parthia still faced each other upon the banks of the Euphrates, and contended, now by arms now by diplomacy, for supremacy in the debateable land of Armenia. Trajan's momentary acquisitions were abandoned by Hadrian, and on this side of the empire the first changes of importance on the frontier belong to the reign of Septimius Severus.¹ Within the frontiers the levelling and unifying process commenced by Augustus had steadily proceeded. A tolerably uniform provincial system covered the whole area of the empire. The client states had one by one been reconstituted as provinces, and even the government of Italy had been in many respects assimilated to the provincial type. The municipal system had spread widely; the period from Vespasian to Aurelius witnessed the elevation to municipal rank of an immense number of communities, not only in the old provinces of the West, in Africa, Spain, and Gaul, but in the newer provinces of the North, and along the line of the northern frontier; and everywhere under the influence of the central imperial authority there was an increasing uniformity in the form of the local constitutions, framed and granted as they all were by imperial edict.² Throughout the empire again the extension of the Roman franchise was preparing the way for the final act by which Caracalla assimilated the legal status of all free-born inhabitants of the empire,³ and in the west and north this was preceded and accompanied by the complete Romanizing of the people in language and civilization. Moreover, the empire, that was thus becoming one in its administrative system, its laws, and its civilization, had as yet continued to enjoy peace and order. The burdens of military service fell on the frontier provinces, and only the echoes of the border wars reached the Mediterranean territories. Yet, in spite of the internal tranquillity and the good government which have made the age of the Antonines famous, we can detect signs of weakness. Though the evils of excessive centralization were hardly felt while the central authority was wielded by vigorous rulers, yet even under Trajan, Hadrian, and the Antonines we notice a ailure of strength in the empire as a whole, and a corresponding increase of pressure on the imperial government itself. The reforms of Augustus had given free play to powers still fresh and vigorous. The ceaseless labours of Hadrian were directed mainly to the careful husbanding of such strength as still remained, or to attempts at reviving it by the sheer force of imperial authority. Among the symptoms of incipient decline which not the most heroic efforts of the government could entirely remove were the growing depopulation especially of the central districts of the empire, the constant financial difficulties, the deterioration in character of the local governments in the provincial communities,⁴ and the increasing reluctance exhibited by all classes to undertake the now onerous burden of municipal office. Lastly, the irruption of the Marcomanni, and the revolt of Avidius Cassius (174-175) in the Eastern provinces, anticipated the two most serious of the dangers which ultimately proved fatal to the empire.

Marcus Aurelius died in 180, and his death was followed by a century of war and disorder, during which nothing but the stern rule of soldier emperors, such as Septimius Severus, Decius, Claudius, Aurelian, and Probus saved the empire from dissolution. The want of any legal security

for the orderly transmission of the imperial power had been partially supplied during the 2d century by the practice of adoption. But throughout the 3d century the Roman world witnessed a series of desperate conflicts between rival generals put forward by their respective legions as claimants for the imperial purple. Between the death of Severus in 211 and the accession of Diocletian in 284, no fewer than twenty-three emperors sat in the seat of Augustus, and of these all but three died violent deaths at the hands of a mutinous soldiery or by the orders of a successful rival. Of the remaining three, Decius fell in battle against the Goths, Valerian died a prisoner in the far East, and Claudius was among the victims of the chronic pestilence which added to the miseries of the time. The "tyrants," as the unsuccessful pretenders to the imperial purple were styled, reappear with almost unfailing regularity in each reign. The claims of Septimius Severus himself, the first and ablest of the soldier emperors, were disputed by Clodius Albinus in the West, and by Pescennius Niger in the East, and at the bloody battle of Lugdunum and the sack of Byzantium rival Roman forces, for the first time since the accession of Vespasian, exhausted each other in civil war.⁵ In 237-238 six emperors perished in the course of a few months. It was, however, during the reign of Gallienus (260-268) that the evil reached its height. The central authority was paralysed; the barbarians were pouring in from the North; the Parthians were threatening to overrun the Eastern provinces; and the legions on the frontiers were left to repel the enemies of Rome as best they could. A hundred ties bound them closely to the districts in which they were stationed; their permanent camps had grown into towns, they had families and farms; the unarmed provincials looked to them as their natural protectors, and were attached to them by bonds of intermarriage and by long intercourse. Now that they found themselves left to repel by their own efforts the invaders from without, they reasonably enough claimed the right to ignore the central authority which was powerless to aid them, and to choose for themselves "imperatores" whom they knew and trusted. The first of these provincial empires was that established by Postumus in Gaul (259-272), and long maintained by his successors Victorinus and Tetricus.⁶ Their authority was acknowledged, not only in Gaul and by the troops on the Rhine, but by the legions of Britain and Spain; and under Postumus at any rate (259-269) the existence of the Gallic empire was justified by the repulse of the barbarians and by the restoration of peace and security to the provinces of Gaul. On the Danube, in Greece, and in Asia Minor none of the "pretenders" enjoyed more than a passing success. It was otherwise in the far East, where the Syrian Odaenathus, prince of Palmyra,⁷ though officially only the governor of the East (dux Orientis) under Gallienus, drove the Persians out of Asia Minor and Syria, recovered Mesopotamia, and ruled Syria, Arabia, Armenia, Cappadocia, and Cilicia with all the independence of a sovereign. Odaenathus was murdered in 266. His young son Vaballathus succeeded him in his titles, but the real power was vested in his widow Zenobia, under whom not only the greater part of Asia Minor but even the province of Egypt was forcibly added to the dominions governed in the name of Gallienus by the Palmyrene prince.

Aurelian in 273; in the next year the Gallic empire came to an end by the surrender of Tetricus, and the successors of Aurelian—Tacitus, Probus, and Carus (275–282)—were at least rulers over the whole extent of the empire.

Barbaric
invasions.

While rival generals were contending for the imperial purple, the very existence of the empire which they aspired to rule was imperilled by foreign invasion. As early as 236 a new enemy, the Alemanni, had crossed the Rhine, but had been driven back by the valour of Maximinus (238), and in the same year the Goths first appeared on the banks of the Danube. It was, however, during the period of internal dissension and civil war from the reign of Philip (244–249) to the accession of Claudius (268) that the barbarians saw and used their opportunity. From across the Rhine bands of Alemanni and Franks swept over Gaul and Spain, and even descended upon the coasts of Africa, until their raids were checked by the Gallic emperor Postumus (253–259). Far more destructive were the raids of the Goths.¹ Towards the close of the reign of Philip (247) they crossed the Danube, and overran Moesia, Thrace, and Macedonia. In 251 they defeated and slew the emperor Decius; and, though his successor Gallus purchased a temporary peace by lavish gifts, the province of Dacia was finally lost to Rome. The Gothic raids by sea which began under Valerian (253–260) were even more destructive. Their fleets issuing from the ports of the Black Sea ravaged the seaboard of Asia Minor, and returned laden with the spoils of the maritime towns. In the reign of Gallienus (260–268) a fleet of five hundred sail appeared off the coasts of Greece itself; Athens, Corinth, Argos, and Sparta were sacked, and Epirus laid waste. On the death of Gallienus (268) the Goths once more marched southward, but in the new emperor Claudius they were confronted at last by an able and resolute opponent. They were decisively defeated and driven back across the Danube (269). Claudius died of the plague in the next year, but by his successor Aurelian Roman authority was established in Moesia and Pannonia, and the Danube frontier was put once more in a state of efficient defence. Five years later (276) Probus repulsed a raid of the Franks and Alemanni, and restored peace on the Rhine. But the rule of Rome now stopped short, as in the reign of Tiberius at the line of the two great rivers; all that had been acquired beyond since the time of Vespasian was abandoned, and on the further banks of the Rhine and Danube stood, in the place of friendly or subject tribes, a threatening array of hostile peoples.

The
Sassanidæ
in
Parthia.

At the close of the 2d century the growing weakness of Parthia seemed to promise an immunity from danger on the Eastern frontier. But with the revolution which placed the Sassanidæ upon the throne the whole situation was changed.² The new dynasty was in blood and religion Persian; it claimed descent from Cyrus and Darius, and aspired to recover from Western hands the dominions which had once been theirs. In 230 Artaxares (Ardashir) had formally demanded from Severus Alexander the restitution of the provinces of Asia, had invaded Mesopotamia, now a Roman province, and even advanced into Syria. Twenty years later his successor Sapor again crossed the Euphrates; in 260, ten years after Decius's defeat by the Goths, the emperor Valerian was conquered and taken prisoner by the Persians, who poured triumphantly into Syria and captured Antioch. But here for the time their successes ended. Three years later Odenathus of Palmyra drove them back, and held the East securely in the name of Rome. On the fall of Zenobia (273) they gained possession for a time of Armenia and Mesopotamia, but

were driven out by the emperor Carus (282), and the frontier line as fixed by Septimius Severus was restored.

Although any serious loss of territory had been avoided, the storms of the 3d century had told with fatal effect upon the general condition of the empire. The "Roman peace" had vanished; not only the frontier territories, but the central districts of Greece, Asia Minor, and even Italy itself, had suffered from the ravages of war, and the fortification of Rome by Aurelian was a significant testimony to the altered condition of affairs. War, plague, and famine had thinned the population and crippled the resources of the provinces. On all sides land was running waste, cities and towns were decaying, and commerce was paralysed. Only with the greatest difficulty were sufficient funds squeezed from the exhausted tax-payers to meet the increasing cost of the defence of the frontiers. The old established culture and civilization of the Mediterranean world rapidly declined, and the mixture of barbaric rudeness with Oriental pomp and luxury which marked the court, even of the better emperors, such as Aurelian, was typical of the general deterioration, which was accelerated by the growing practice of settling barbarians on lands within the empire, and of admitting them freely to service in the Roman army.

PERIOD II.: 284–476 A.D.—(a) *From the Accession of Diocletian to the Death of Theodosius* (284–395 A.D.).—The work begun by Aurelian and Probus, that of fortifying the empire alike against internal sedition and foreign invasion, was completed by Diocletian and Constantine the Great, whose system of government, novel as it appears at first sight, was in reality the natural and inevitable outcome of the history of the previous century.³ Its object was twofold, to give increased stability to the imperial authority itself, and to organize an efficient administrative machinery throughout the empire. In the second year of his reign Diocletian associated Maximian with himself as colleague, and six years later (292) the hands of the two "Augusti" were further strengthened by the proclamation of Constantius and Galerius as "Caesars." Precedents for such an arrangement might have been quoted from the earlier history of the empire;⁴ and the considerations in favour of it at the time were strong. It divided the overwhelming burdens and responsibilities of government, without sacrificing the unity of the empire; for, although to each of the Augusti and Cæsars a separate sphere was assigned, the Cæsars were subordinate to the higher authority of the Augusti, and over all his three colleagues Diocletian claimed to exercise a paramount control. It at least reduced the too familiar risk of a disputed succession by establishing in the two Cæsars the natural successors to the higher position of Augusti, and finally it satisfied the jealous pride of the rival armies of the empire by giving them what they had so constantly claimed, imperatores of their own. The distribution of power between Diocletian and his colleagues followed those lines of division which the feuds of the previous century had only too clearly marked out. The armies of the Rhine, the Danube, and of Syria fell to the lot respectively of Constantius, Galerius, and Diocletian, the central districts of Italy and Africa to Maximian.⁵ A

² Gibbon, i. chap. viii.; Mommsen, v. 411; cf. PERSIA.

Altered character of the imperial authority.

Leveling policy of Diocletian.

Degradation of Italy and Rome.

The new administrative system.

second point in the new system was the complete and final emancipation of the imperial authority from all constitutional limitation and control. The last lingering traces of its republican origin disappear. The emperors from Diocletian onwards are autocrats in theory as well as in practice. The divided powers, the parallel jurisdictions, the defined prerogatives of the Augustan system have all vanished. There is but one legal authority throughout the empire, that of the emperor himself; and that authority is absolute. This avowed despotism Diocletian, following in the steps of Aurelian, hedged round with all the pomp and majesty of Oriental monarchy. The final adoption of the title "dominus," so often rejected by earlier emperors, the diadem on the head, the robes of silk and gold, the replacement of the republican salutation of a fellow citizen by the adoring prostration even of the highest in rank before their lord and master, were all significant marks of the new regime.¹ In the hands of this absolute ruler was placed the entire control of an elaborate administrative machinery. Most of the old local and national distinctions, privileges, and liberties which had once flourished within the empire had already disappeared under the levelling influence of imperial rule, and the levelling process was now completed. Roman citizenship had, since the edict of Caracalla, ceased to be the privilege of a minority. Diocletian finally reduced Italy and Rome to the level of the provinces: the provincial land-tax and provincial government were introduced into Italy,² while Rome ceased to be even in name the seat of imperial authority.³ Throughout the whole area of the empire a uniform system of administration was established, the control of which was centred in the imperial palace, and in the confidential ministers who stood nearest the emperor's person.⁴ Between the civil and military departments the separation was complete. At the head of the former, at least under the completed organization of Constantine, were the four prefects,⁵ next below them the "vicarii," who had charge of the "dioceses," below these again the governors of the separate provinces ("praesides," "correctores," "consulares"),⁶ under each of whom was a host of minor officials. Parallel with this civil hierarchy of prefects, vicars, praesides, and smaller "officiales" was the series of military officers, from the "magistri militum," the "duces," and "comites" downwards. But the leading features of both are the same. In both there is the utmost possible subordination and division of authority. The subdivision of provinces, begun by the emperors of the 2d century, was systematically carried out by Diocletian, and either by Diocletian or by Constantine the legion was reduced to one-fifth of its former strength.⁷ Each official, civil or military, was placed directly under the orders of a superior, and thus a continuous chain of authority connected the emperor with the meanest official in his service. Finally, the various grades in these two imperial services were care-

fully marked by the appropriation to each of distinctive titles, the highest being that of "illustis," which was confined to the prefects and to the military magistri and comites, and to the chief ministers.⁸

There can be little doubt that on the whole these reforms prolonged the existence of the empire, by creating a machinery which enabled the stronger emperors to utilize effectively all its available resources, and which even to some extent made good the deficiencies of weaker rulers. But in many points they failed to attain their object. Diocletian's division of the imperial authority among colleagues, subject to the general control of the senior Augustus, was effectually discredited by the twenty years of almost constant conflict which followed his own abdication (305-323). Constantine's partition of the empire among his three sons was not more successful in ensuring tranquillity, and in the final division of the East and West between Valens and Valentinian (364) the essential principle of Diocletian's scheme, the maintenance of a single central authority, was abandoned. The "tyrants," the curse of the 3d century, were far from unknown in the 4th, and their comparative paucity was due rather to the hold which the house of Constantine obtained upon the allegiance of their subjects than to the system of Diocletian. This system, moreover, while it failed altogether to remove some of the existing evils, aggravated others. The already overburdened financial resources of the empire were strained still further by the increased expenditure necessitated by the substitution of four imperial courts for one, and by the multiplication in every direction of paid officials. The gigantic bureaucracy of the 4th century proved, in spite of its undoubted services, an intolerable weight upon the energies of the empire.⁹

Diocletian and Maximian formally abdicated their high office in 305. Eighteen years later Constantine, the sole survivor of six rival emperors, united the whole empire under his own rule. His reign of fourteen years was marked by two events of first-rate importance,—the recognition of Christianity as the religion of the empire,¹⁰ and the building of the new capital at Byzantium. The alliance which Constantine inaugurated between the Christian church and the imperial government, while it enlisted on the side of the state one of the most powerful of the new forces with which it had to reckon, imposed a check, which was in time to become a powerful one, on the imperial authority. The establishment of the new "City of Constantine" as a second Rome, with a second senate, a prefect of the city, regiones, and even largesses, did more than proclaim once again the deposition of Rome from her old imperial position. It paved the way for the final separation of East and West by providing the former for the first time with a suitable seat of government on the Bosphorus. The death of Constantine in 337 was followed, as the abdication of Diocletian had been, by the outbreak of quarrels among rival Cæsars. Of the three sons of Constantine who in 337 divided the empire between them, Constantine the eldest fell in civil war against his brother Constans; Constans himself was, ten years afterwards, defeated and slain by Magnentius; and the latter in his turn was in 353 vanquished by Constantine's only surviving son Constantius. Thus for the second time the whole empire was united under the rule of a member of the house of Constantine. But in 355 Con-

¹ Aurel. Victor, 39; Eutrop., ix. 26.

² Marquardt, *Staatsverw.*, i. 80-83, where a list is given of the seventeen so-called "provinciae" into which Italy, together with Sicily, Sardinia, and Corsica, was divided. Each had its own governor; the governors were subject to the two vicarii (vic. urbis, vic. Italiae), and they in turn to the prefect of Italy, whose prefecture, however, included as well Africa and Western Illyricum.

³ The seats of government for Diocletian and his three colleagues were Milan, Treves, Sirmium, Nicomedia.

⁴ For these last, see Gibbon, ii. chap. xvii. p. 325; cf. also *Notitia Dignitatum* and Böcking's notes.

⁵ "Praefecti praetorio." The four prefectures were Oriens, Illyricum, Italia, Gallia, to which must be added the prefectures of Rome and Constantinople.

⁶ There were 12 dioceses and 116 provinces; cf. in addition to the authorities mentioned above, Bethmann-Hollweg, *Civil-Prozess*, iii.; Walter, *Gesch. d. Röm. Rechts*, i. pp. 428 sq. (Bonn, 1845).

⁷ For this and other changes in the military organization, see Madvig, ii. 572; Marquardt, ii. 584 sq.

⁸ The grades were as follows: illustres, spectabiles, clarissimi, perfectissimi, egregii. For the other insignia, see Madvig, ii. 590, and the *Notitia Dignitatum*.

⁹ The passion for moulding everything after a uniform official pattern extended beyond the departments of civil and military administration to the professions and to society. Walter, *op. cit.*, i. 456; Marquardt, ii. 230 sq.

Effects of these reforms.

Recognition of Christianity.

Constantinople.

Constantius II.

351-366.

stantius reluctantly granted the title of Cæsar to his cousin Julian and placed him in charge of Gaul, where the momentary elevation of a tyrant, Silvanus, and still more the inroads of Franks and Alemanni, had excited alarm. But Julian's successes during the next five years were such as to arouse the jealous fears of Constantius. In order to weaken his suspected rival the legions under Julian in Gaul were suddenly ordered to march eastward against the Persians (360). They refused, and when the order was repeated replied by proclaiming Julian himself emperor and Augustus. Julian, with probably sincere reluctance, accepted the position, but the death of Constantius in 361 saved the empire from the threatened civil war. The chief importance of the career of Julian, both as Cæsar in Gaul from 355 to 361 and during his brief tenure of sole power (361-363), lies, so far as the general history of the empire is concerned, in his able defence of the Rhine frontier and in his Persian campaign; for his attempted restoration of pagan and in especial of Hellenic worships had no more permanent effect than the war which he courageously waged against the multitudinous abuses which had grown up in the luxurious court of Constantius.¹ But his vigorous administration in Gaul undoubtedly checked the barbarian advance across the Rhine, and postponed the loss of the Western provinces, while, on the contrary, his campaign in Persia, brilliantly successful at first, resulted in his own death, and in the immediate surrender by his successor Jovian of the territories beyond the Tigris won by Diocletian seventy years before. Julian died on June 26, 363, his successor Jovian on February 17, 364; and on the 26th of February Valentinian was acknowledged as emperor by the army at Nicæa. In obedience to the expressed wish of the soldiers that he should associate a colleague with himself, he conferred the title of Augustus upon his brother Valens, and the long-impending division of the empire was at last effected.—Valentinian became emperor of the West, Valens of the East. From 364 till his death in 375 the vigour and ability of Valentinian kept his own frontier of the Rhine tolerably intact, and prevented any serious disasters on the Danube. But his death, which deprived the weaker Valens of a trusted counsellor and ally, was followed by a crisis on the Danube, more serious than any which had occurred there since the defeat of Decius. In 376 the Goths, hard pressed by their new foes from the eastward, the Huns, sought and obtained the protection of the Roman empire. They were transported across the Danube and settled in Moesia, but, indignant at the treatment they received, they rose in arms against their protectors. In 378 at Hadrianople Valens was defeated and killed; the victorious Goths spread with fire and sword over Illyricum, and advanced eastward to the very walls of Constantinople. Once more, however, the danger passed away. The skill and tact of Theodosius, who had been proclaimed emperor of the East by Gratian, conciliated the Goths; they were granted an allowance, and in large numbers entered the service of the Roman emperor. The remaining years of Theodosius's reign (382-395) were mainly engrossed by the duty which now devolved upon the emperor of the East of upholding the increasingly feeble authority of his colleague in the West against the attacks of pretenders. Maximus, the murderer of Gratian (383), was at first recognized by Theodosius as Cæsar, and left in undisturbed command of Gaul, Spain, and Britain; but, when in 386 he proceeded to oust Valentinian II. from Italy and Africa, Theodosius marched westward, crushed him, and installed Valentinian

as emperor of the West. In the very next year, however, the murder of Valentinian (392) by Arbogast, a Frank, was followed by the appearance of a fresh tyrant in the person of Eugenius, a domestic officer and nominee of Arbogast himself. Once more Theodosius marched westward, and near Aquileia decisively defeated his opponents. But his victory was quickly followed by his own illness and death (395), and the fortunes of East and West passed and into the care of his two sons Arcadius and Honorius.

(b) *From the Death of Theodosius to the Extinction of the Western Empire (395-476).*—Through more than a century from the accession of Diocletian the Roman empire had succeeded in holding at bay the swarming hordes of barbarians. But, though no province had yet been lost, as Dacia had been lost in the century before, and though the frontier lines of the Rhine and the Danube were still guarded by Roman forts and troops, there were signs in plenty that a catastrophe was at hand.

From all the writers who deal with the 4th century comes the same tale of declining strength and energy. From Lactantius to Zosimus we have one long series of laments over the depression and misery of the provinces. To meet the increased expenditure necessary to maintain the legions, to pay the hosts of officials, and to keep up the luxurious splendour of the imperial courts, not only were the taxes raised in amount, but the most oppressive and inquisitorial methods were adopted in order to secure for the imperial treasury every penny that could be wrung from the wretched taxpayer. The results are seen in such pictures as that which the panegyrist Eumenius² draws of the state of Gaul (306-312) under Constantine, in the accounts of the same province under Julian fifty years later, in those given by Zosimus early in the 5th century, and in the stringent regulations of the Theodosian code, dealing with the assessment and collection of the taxes. Among the graver symptoms of economic ruin were the decrease of population, which seriously diminished not only the number of taxpayers, but the supply of soldiers for the legions;³ the spread of infanticide; the increase of waste lands whose owners and cultivators had fled to escape the tax collector; the declining prosperity of the towns; and the constantly recurring riots and insurrections, both among starving peasants, as in Gaul,⁴ and in populous cities like Antioch.⁵ The distress was aggravated by the civil wars, by the rapacity of tyrants, such as Maxentius and Maximus, but above all by the raids of the barbarians, who seized every opportunity afforded by the dissensions or incapacity of the emperors to cross the frontiers and harry the lands of the provincials. Constantine (306-312), Julian (356-360), and Valentinian I. (364-375) had each to give a temporary breathing space to Gaul by repelling the Franks and Alemanni. Britain was harassed by Picts and Scots from the north (367-370), while the Saxon pirates swept the Northern seas and the coasts both of Britain and Gaul. On the Danube the Quadi, Sarmatæ, and above all the Goths, poured at intervals into the provinces of Pannonia and Moesia, and penetrated to Macedon and Thrace. In the East, in addition to the constant border feud with Persia, we hear of ravages by the Isaurian mountaineers, and by a new enemy, the Saracens.⁶

Even more ominous of coming danger was the extent

to which the European half of the empire was becoming barbarized. The policy which had been inaugurated by Augustus himself of settling barbarians within the frontiers had been taken up on a larger scale and in a more systematic way by the Illyrian emperors of the 3d century, and was continued by their successors in the 4th. In Gaul, in the provinces south of the Danube, even in Macedon and Italy, large barbarian settlements had been made—Theodosius in particular distinguishing himself by his liberality in this respect. Nor did the barbarians admitted during the 4th century merely swell the class of half-servile coloni. On the contrary, they not only constituted to an increasing extent the strength of the imperial forces, but won their way in ever-growing numbers to posts of dignity and importance in the imperial service. Under Constantine the palace was crowded with Franks.¹ Julian led Gothic troops against Persia, and the army with which Theodosius defeated the tyrant Maximus (388) contained large numbers of Huns and Alans, as well as of Goths. The names of Arbogast, Stilicho, and Rufinus are sufficient proof of the place held by barbarians near the emperor's person and in the control of the provinces and legions of Rome; and the relations of Arbogast to his nominee for the purple, Eugenius, were an anticipation of those which existed between Ricimer and the emperors of the latter half of the 5th century.

Barbaric
invasions.

It was by barbarians already settled within the empire that the first of the series of attacks which finally separated the Western provinces from the empire and set up a barbaric ruler in Italy were made,² and it was in men of barbarian birth that Rome found her ablest and most successful defenders, and the emperors both of East and West their most capable and powerful ministers. The Visigoths whom Alaric led into Italy had been settled south of the Danube as the allies of the empire since the accession of Theodosius. The greater part of them were Christians at least in name, and Alaric himself had stood high in the favour of Theodosius. The causes which set them in motion are tolerably clear. Like the Germans of the days of Cæsar, they wanted land for their own, and to this land-hunger was evidently added in Alaric's own case the ambition of raising himself to the heights which had been reached before him by the Vandal Stilicho at Ravenna and the Goth Rufinus at Constantinople. The jealousy which existed between the rulers of the Western and Eastern empires furthered his plans. In the name of Arcadius, the emperor of the East, or at least with the connivance of Arcadius's minister Rufinus, he occupied the province of Illyricum, and from thence ravaged Greece, which according to the existing division of provinces belonged to the Western empire. Thence in 396 he retreated before Stilicho to Illyricum, with the command of which he was now formally invested by Arcadius, and which gave him the best possible starting point for an attack on Italy.³ In 400 he led his people, with their wives and families, their waggons and treasure, to seek lands for themselves south of the Alps. But in this first invasion he penetrated no farther than the plains of Lombardy, and after the desperate battle of Pollentia

Alaric in
Italy.

(402)⁴ he slowly withdrew from Italy, his retreat being hastened by the promises of gold freely made to him by the imperial government. Not until the autumn of 408 did Alaric again cross the Alps. Stilicho was dead; the barbarian troops in Honorius's service had been provoked into joining Alaric by the insane anti-Teutonic policy of Honorius and his ministers, and Alaric marched unopposed to Rome. This time, however, the payment of a heavy ransom saved the city. Several months of negotiation followed between Alaric and the court of Ravenna. Alaric's demands were moderate, but Honorius would grant neither lands for his people nor the honourable post in the imperial service which he asked for himself. Once more Alaric sat down before Rome, and this time the panic-stricken citizens discovered a fresh mode of escape. Attalus, a Greek, the prefect of the city, was declared Augustus, and Alaric accepted the post of commander-in-chief. But the incapacity of Attalus was too much for the patience of his barbarian minister and patron, and after a few months' reign Alaric formally deposed him and renewed his offers to Honorius. Again, however, they were declined, and Alaric marched to the siege and sack of Rome (410).⁵ His death followed hard on his capture of Rome. Two years later (412) his suc-
cessor Ataulf led the Visigoths to find in Gaul the lands which Alaric had sought in Italy. It is characteristic of the anarchical condition of the West that Ataulf and his Goths should have fought for Honorius in Gaul against the tyrants,⁶ and in Spain against the Vandals, Suevi, and Alani; and it was with the consent of Honorius that in 419 Wallia, who had followed Ataulf as king of the Visigoths, finally settled with his people in south-western Gaul and founded the Visigothic monarchy.⁷

The Visi-
goths in
Gaul.

It was about the same period that the accomplished fact of the division of Spain between the three barbarian tribes of Vandals, Suevi, and Alani was in a similar manner recognized and approved by the paramount authority of the emperor of the West.⁸ These peoples had crossed the Rhine at the time when Alaric was making his first attempt on Italy. A portion of the host led by Radagaisus⁹ actually invaded Italy, but were cut to pieces by Stilicho near Florence (405); the rest pressed on through Gaul, crossed the Pyrenees, and entered the as yet untouched province of Spain.

Vandals,
Suevi, and
Alani in
Spain.

Honorius died in 423. His authority had survived the dangers to which it had been exposed alike from the rivalry of tyrants and barbaric invasion, and with the single exception of Britain¹⁰ no province had yet formally broken loose from the empire. But over a great part of the West this authority was now little more than nominal; throughout the major part of Gaul and in Spain the barbarians had settled, and barbarian states were growing up which still recognized the paramount supremacy of the emperor, but were in all essentials independent of his control. The question for the future was whether this relationship between the declining imperial authority and the vigorous young states which had planted the seeds of a fresh life in the provinces would be maintained.

Vandal
conquest
of Africa.

by two events of first-rate importance,—the conquest of Africa by the Vandals¹ and the invasion of Gaul and Italy by Attila. The Vandal settlement in Africa was closely akin in its origin and results to those of the Visigoths and of the Vandals themselves in Gaul and Spain. Here as there the occasion was given by the jealous quarrels of powerful imperial ministers. The feud between Boniface, count of Africa, and Aetius, the “master-general” or “count of Italy,” opened the way to Africa for the Vandal king Gaiseric (Genseric), as that between Stilicho and Rufinus had before set Alaric in motion westward, and as the quarrel between the tyrant Constantine and the ministers of Honorius had paved the way for the Vandals, Sueves, and Alans into Spain. In this case too, as in the others, the hunger for more land and treasure was the impelling motive with the barbarian invader, and in Africa, as in Gaul and Spain, the invaders’ acquisitions were confirmed by the imperial authority which they still professed to recognize. It was in 429 that Gaiseric, king of the Vandals, crossed with his warriors, their families and goods, to the province of Africa, a province hitherto almost as untouched as Spain by the ravages of war. Thanks to the quarrels of Boniface and Aetius their task was an easy one. The defenceless province was easily and quickly overrun. In 435² a formal treaty secured them in the possession of a large portion of the rich lands which were the granary of Rome, in exchange for a payment probably of corn and oil. Carthage was taken in 439, and by 440 the Vandal kingdom was firmly established.

Attila
and the
Huns.

Eleven years later (451) Attila invaded Gaul, but this Hunnish movement was in a variety of ways different from those of the Visigoths and Vandals. Nearly a century had passed since the Huns first appeared in Europe, and drove the Goths to seek shelter within the Roman lines. Attila was now the ruler of a great empire in central and northern Europe,³ and, in addition to his own Huns, the German tribes along the Rhine and Danube and far away to the north owned him as king. He confronted the Roman power as an equal; and, in marked contrast to the Gothic and Vandal chieftains, he treated with the emperors of East and West as an independent sovereign. His advance on Gaul and Italy threatened, not the establishment of yet one more barbaric chieftain on Roman soil, but the subjugation of the civilized and Christian West to the rule of a heathen and semi-barbarous conqueror. But Rome now reaped the advantages of the policy which Honorius had perhaps involuntarily followed. The Visigoths in Gaul, Christian and already half Romanized, rallied to the aid of the empire against a common foe. Attila, defeated at Châlons⁴ by Aetius, withdrew into Pannonia (451). In the next year he overran Lombardy, but penetrated no farther south, and in 453 he died. With the murder of Valentinian III. (455) the western branch of the house of Theodosius came to an end, and the next twenty years witnessed the accession and deposition of nine emperors. The three months’ rule of Maximus is memorable only for the invasion of Italy and the sack of Rome by the Vandals under Gaiseric. From 456–472 the actual ruler of Italy was Ricimer, the Sueve. Of the four emperors whom he placed on the throne, Majorian (457–461) alone played any

imperial part outside Italy.⁵ Ricimer died in 472, and two years later a Pannonian, Orestes, aspired to fill the place which Ricimer had occupied. Julius Nepos was deposed, and Orestes filled the vacancy by proclaiming as Augustus his own son Romulus. But Orestes’s tenure of power was brief. The barbarian mercenaries in Italy determined to secure for themselves a position there such as that which their kinsfolk had won in Gaul and Spain and Africa. Their demand for a third of the lands of Italy was refused by Orestes,⁶ and they instantly rose in revolt. On the defeat and death of Orestes they proclaimed their leader, Odoacer the Rugian,⁷ king of Italy. Romulus Augustulus laid down his imperial dignity, and the court at Constantinople was informed that there was no longer an emperor of the West.⁸

Orestes
the Pan-
nonian

Romulus
Augustus

The installation of a barbarian king in Italy was the natural climax of the changes which had been taking place in the West throughout the 5th century. In Spain, Gaul, and Africa barbarian chieftains were already established as kings. In Italy, for the last twenty years, the real power had been wielded by a barbarian officer. Odoacer, when he decided to dispense with the nominal authority of an emperor of the West, placed Italy on the same level of independence with the neighbouring provinces. But the old ties with Rome were not severed. The new king of Italy formally recognized the supremacy of the one Roman emperor at Constantinople, and was invested in return with the rank of “patrician,” which had been held before him by Aetius and Ricimer. In Italy too, as in Spain and Gaul, the laws, the administrative system, and the language remained Roman.⁹ But the emancipation of Italy and the Western provinces from direct imperial control, which is signalized by Odoacer’s accession, has rightly been regarded as marking the opening of a new epoch. It made possible in the West the development of a Romano-German civilization; it facilitated the growth of new and distinct states and nationalities; it gave a new impulse to the influence of the Christian church, and laid the foundations of the power of the bishops of Rome.

SECTION II.—HISTORY OF THE ROMAN REPUBLIC IN THE MIDDLE AGES.

The history of the Roman republic during the Middle Ages has yet to be written, and only by the discovery of new documents can the difficulties of the task be completely overcome. Although very different in its origin, the Roman republic gradually assumed the same form as the other Italian communes, and with almost identical institutions. But, owing to the special local conditions amid which it arose, it maintained a distinct physiognomy and character. The deserted Campagna surrounding the city checked any notable increase of trade or industry, and prevented the establishment of the guilds on the solid footing that elsewhere made them the basis and support of the commune. There was also the continual and oppressive influence of the empire, and, above all, the presence of the papacy, which often appeared to absorb the entire vitality of the city. At such moments the commune seemed annihilated, but it speedily revived and reasserted itself. Consequently there are many apparent gaps in its history, and we have often extreme difficulty in discovering the invisible links connecting the visible fragments.

Even the aristocracy of Rome had a special stamp. In the other republics, excepting Venice, it was feudal, of German origin, and in perpetual conflict with the popular and commercial elements which sought its destruction. The history of municipal freedom lay in this struggle. But the infiltration of Teutonic and feudal elements broke up the ancient aristocracy of Rome, and left it at the mercy of the people. Then the popes, by the bestowal of lucrative posts, rich benefices, and vast estates, and, above all, by raising many nobles to the purple, introduced new blood into the Roman aristocracy, and endued it with increasing strength and vitality. Always divided, always turbulent, this irrepressible body was a continual source of discord and civil war, of permanent confusion and turmoil. Amidst all these difficulties the commune struggled on, but never succeeded in long preserving a regular course or administration. What with continual warfare, attacks on the Capitol, and consequent slaughter, pillage, and incendiarism, it is no wonder that so few original documents are left to illustrate the history of the Roman republic. Nor have chroniclers and historians done much to supply this want, since, in treating of Roman affairs, their attention is mainly devoted to the pope and the emperor. Nevertheless we will attempt to connect in due order all the facts gleaned from former writers and published records.

The removal of the seat of the empire to Constantinople effected a radical change in the political situation of Rome; nor was this change neutralized by the formation of the weak Western empire soon to be shattered by the Germanic invasions. But we still find Roman laws and institutions; and no sign is yet manifest of the rise of a mediæval municipality. The earliest germ of one is seen during the barbarian invasions. Of these we need only enumerate the four most important,—those of the Goths, Byzantines, Lombards, and Franks. The Gothic rule merely superposed upon the Roman social order a Teutonic stratum, that never penetrated beneath its surface. The Goths always remained a conquering army; according to the German custom, they took possession of one third of the vanquished territory, but, while forbidding the Romans to bear arms, left their local administration intact. The senate, the *curiae*, the principal magistrates, both provincial and municipal, the prefect of the city, and the Roman judges enforcing the enactments of the Roman law were all preserved. Already, under the empire, the civil power had been separated from the military, and this separation

was maintained. Hence there was no visible change in the constitution of the state. Only, now there were conquered and conquerors. All real and effective power was on the side of brute force, and the Goths alone bore arms. In every province they had their *comites*, or heads of the army, who had judicial power over their countrymen, especially in criminal cases. Here then was a combination of civil and military jurisdiction altogether contrary to the Roman idea. Nor can it be denied that the *comites*, as chiefs of the armed force, necessarily exerted a direct or indirect influence on the civil and administrative power of the provinces, and especially upon the collection of the imposts. The civil arm, being virtually subordinate to the military, suffered unavoidable change. Notwithstanding the praise lavished on Theodoric, the kingdom founded by him in Italy had no solid basis. It was composed of two nations differing in race and traditions and even in religion, since the Goths were Arians and the Romans Catholics. The latter were sunk in degeneracy and corruption; their institutions were old and decrepit. It was necessary to infuse new life into the worn-out body. This was difficult, perhaps impossible; and at any rate Theodoric never attempted the task. Little wonder then if the Gothic kingdom succumbed to the Byzantine hordes from Constantinople.

The wars of Belisarius and Narses against the Goths The Byzantine rule. lasted twenty years (535–555 A.D.), caused terrible slaughter and devastation in Italy, and finally subjected her to Constantinople. In place of a Gothic king she was now ruled by a Greek patrician, afterwards entitled the exarch, who had his seat of government at Ravenna as lieutenant of the empire. In the chief provincial cities the ruling counts were replaced by dukes, subordinate to the exarch; and the smaller towns were governed by military tribunes. Instead of dukes, we sometimes find *magistri militum*, apparently of higher rank. The *præfectus prætorio* of Italy, likewise a dependant of the exarch, was at the head of the civil administration. The pragmatic sanction (554), promulgating the Justinian code, again separated the civil from the military power, which was no longer allowed to intervene in the settlement of private disputes, and, by conferring on the bishops the superintendence of and authority over the provincial and municipal government, soon led to the increase of the power of the church, which had already considerable influence.

The new organization outwardly resembled that of the Goths: one army had been replaced by another, the counts by dukes; there was an exarch instead of a king; the civil and military jurisdictions were more exactly defined. But the army was not, like that of the Goths, a conquering nation in arms; it was a Græco-Roman army, and did not hold a third of the territory which was now probably added to the possessions of the state. The soldiery took its pay from Constantinople, whence all instructions and appointments of superior officers likewise proceeded. In Rome we find a *magister militum* at the head of the troops. The Roman senate still existed, but was reduced to a shadow. Theodoric had left it intact until he suspected it of hostile designs and dealings with the Byzantines, but then began to persecute it, as was proved by the wretched fate of Boetius and Symmachus. Nevertheless the senate survived, added the functions of a *curia* or municipal council to those of a governmental assembly, and took part in the election of the pope—already one of the chief affairs of Rome. So many senators, however, were slaughtered during the Byzantine war that it was commonly believed to be extinct. The pragmatic sanction, conferring on senate and pope the superintendence of weights and measures in Italy, is a convincing proof to the contrary, although, in the general chaos, now that

Rome was a mere provincial city, constantly exposed to attack, we may imagine to what the senate was reduced.

All Roman institutions were altered and decayed; but their original features were still to be traced, and no heterogeneous element had been introduced into them. The first dawn of a completely new epoch can only be dated from the invasion of the Lombards (568-572). Their conquest of a large portion of Italy was accompanied by the harshest oppression. They abolished all ancient laws and institutions, and not only seized a third of the lands, but reduced the inhabitants to almost utter slavery. But, in the unsubdued parts of the country—namely, in Ravenna, Rome, and the maritime cities—a very different state of things prevailed. The necessity for self-defence and the distance of the empire, now too worn out to render any assistance, compelled the inhabitants to depend solely on their own strength. Thus, certain maritime cities, such as Naples, Amalfi, Pisa, and Venice, soon attained to a greater or less degree of liberty and independence.

The Lombards.

The popes.

Gregory I.

A special state of things now arose in Rome. We behold the rapid growth of the papal power and the continual increase of its moral and political influence. This had already begun under Leo I., and been further promoted by the pragmatic sanction. Not only the superintendence but often the nomination of public functionaries and judges was now in the hands of the popes. And the accession to St Peter's chair of a man of real genius in the person of Gregory I., surnamed the Great, marked the commencement of a new era. By force of individual character, as well as by historic necessity, this pope became the most potent personage in Rome. Power fell naturally into his hands; he was the true representative of the city, the born defender of church and state. His ecclesiastical authority, already great throughout Italy, was specially great in the Roman diocese and in southern Italy. The continual offerings of the faithful had previously endowed the church with enormous possessions in the province of Rome, in Sicily, Sardinia, and other parts. The administration of all this property soon assumed the shape of a small government council in Rome. This protected and succoured the oppressed, settled disputes, nominated judges, and controlled the ecclesiastical authorities. The use made by the pope of his revenues greatly contributed to the increase of his moral and political authority. When the city was besieged by the Lombards, and the emperor left his army unpaid, Gregory supplied the required funds and thus made resistance possible. And, when the defence could be no longer maintained, he alone, by the weight of his personal influence and the payment of large sums, induced the Lombards to raise the siege. He negotiated in person with Agilulph, and was recognized by him as the true representative of the city. Thus Rome, after being five times taken and sacked by the barbarians, was, on this occasion, saved by its bishop. The exarch, although unable to give any help, protested against the assumption of so much authority by the pope; but Gregory was no usurper, and his attitude was the natural result of events. "For twenty-seven years"—so wrote this pontiff to the imperial government of Constantinople—"we lived in terror of the Longobards, nor can I say what sums we had to pay them. There is an imperial treasurer with the army at Ravenna; but here it is I who am treasurer. Likewise I have to provide for the clergy, the poor, and the people, and even to succour the distress of other churches."

The Roman commune.

It was at this moment that the new Roman commune began to take shape and acquire increasing vigour owing to its distance from the seat of the empire and its resistance to the Lombard besiegers. Its special character was

now to be traced in the preponderance of the military over the civil power. A Roman element had penetrated into the army, which was already possessed of considerable political importance. The prefect of Rome loses authority and seems almost a nullity compared with the *magister militum*. Hardly anything is heard of the senate. "*Quia enim Senatus deest, populus interit*," exclaims Gregory in a moment of despair. The popes now make common cause with the people against the Lombards on the one hand and the emperor on the other. But they avoid an absolute rupture with the empire, lest they should have to face the Lombard power without any prospect of help. Later, when the growing strength of the commune becomes menacing, they remain faithful to the empire in order not to be at the mercy of the people. It was a permanent feature of their policy never to allow the complete independence of the city until they should be its sole and absolute masters. But that time was still in the future. Meanwhile pope and people joined in the defence of their common interests.

This alliance was cemented by the religious disputes of the East and the West. First came the Monothelite controversy regarding the twofold nature of Christ. In order to compel obedience to his edict, the emperor commanded the exarch to take energetic measures, and, provided he could secure the favour of the Roman army, to actually seize the person of Pope Martin I. (649-654). A long and violent struggle ensued, in which the people of Rome and of other Italian cities sided so vigorously with the popes that John VI. (701-705) had to interpose in order to release the exarch from captivity and prevent a definitive rupture with the empire. Later (710-711) Ravenna revolted against the emperor, organized its armed population under twelve flags, and almost all the cities of the exarchate joined in a resistance that was the first step towards the independence of the Italian communes. A still fiercer religious quarrel then broke out concerning images. Pope Gregory II. (715-731) opposed the celebrated edict of the iconoclastic emperor Leo the Isaurian. Venice and the Pentapolis took up arms in favour of the pope, and elected dukes of their own without applying to the emperor. Again public disorder rose to such a pitch that the pope was obliged to check it lest it should go too far.

In the midst of these warlike tumults a new constitution, almost a new state, was being set up in Rome. The duchy of Rome. During the conflict with Philippicus, the Monothelite and heretical emperor who ascended the throne in 711, the *Liber Pontificalis* makes the first mention of the duchy of Rome (*ducatus Romanæ urbis*), and we find the people struggling to elect a duke of their own. In the early days of the Byzantine rule the territory appertaining to the city was no greater than under the Roman empire. But, partly through the weakness of the government of Constantinople, and above all through the decomposition of the Italian provinces under the Lombards, who destroyed all unity of government in the peninsula, this dukedom was widely extended, and its limits were always changing in accordance with the course of events. It was watered by the Tiber, and stretched into Tuscia to the right, starting from the mouth of the Marta, by Tolfa and Bleda, and reaching as far as Orte. Viterbo was a frontier city of the Lombards. On the left the duchy extended into Latium as far as the Garigliano. It spread very little to the north-east and was badly defended on that side, inasmuch as the duchy of Spoleto reached to within fourteen miles of the Salara gate. On the other side, towards Umbria, the river Nera was its boundary line.

The constitution of the city now begins to show the

The first constitution of the commune.

results of the conditions amid which it took shape. The separation of the civil from the military power has entirely disappeared. This is proved by the fact that, after the year 600, there is no further mention of the prefect. His office still survived, but with a gradual change of functions, until, in the 8th century, he once more appears as president of a criminal tribunal. The constitution of the duchy and of the new republic formed during the wars with the Lombards and the exarch was substantially of an aristocratico-military nature. At its head was the duke, first elected by the emperor, then by the pope and the people, and, as his strength and influence grew with those of the commune, he gradually became the most respected and powerful personage in Rome. The duke inhabited the palace of the Cæsars on the Palatine Hill, and had both the civil and the military power in his hands; he was at the head of the army, which, being composed of the best citizens and highest nobility of Rome, was a truly national force. This army was styled the *felicissimus* or *florens exercitus Romanus* or also the *militia Romana*. Its members never lost their citizen stamp; on the contrary they formed the true body of the citizens. We find mention of other *duces* in Rome, but these were probably other leaders or superior officers of the army. Counts and tribunes are found in the subject cities bound to furnish aid to the capital. In fact during the pontificate of Sergius II. (844), when the duchy was threatened by a Saracenic invasion, they were requested to send troops to defend the coast, and as many soldiers as possible to the city.

The different classes of society in Rome.

At that time the inhabitants of Rome were divided into four principal classes—clergy, nobles, soldiers, and simple citizens. The nobles were divided into two categories, first the genuine *optimates*, i.e., members of old and wealthy families with large estates, and filling high, and often hereditary, offices in the state, the church, and the army. These were styled *proceres* and *primates*. The second category comprised landed proprietors, of moderate means but exalted position, mentioned as *nobiles* by Gregory I., and constituting in fact a numerous petty nobility and the bulk of the army. Next followed the citizens, i.e., the commercial class, merchants, and craftsmen, who, having as yet no fixed organization and but little influence, were simply designated as *honesti cives*. These, however, were quite distinct from the plebeians, *plebs*, *vulgus populi*, *virii humiles*, who in their turn ranked above bondsmen and slaves. The *honesti cives* did not usually form part of the army, and were only enrolled in it in seasons of emergency. Nevertheless the army was not only national, but became increasingly democratic, so that in the 10th century it included every class of inhabitants except churchmen and slaves. At that period we sometimes find the whole people designated as the *exercitus*, those actually under arms being distinguished as the *militia exercitus Romani*. This again was divided into bands or "numbers," i.e., regiments, and also, in a manner peculiar to Rome, into *scholae militum*. These *scholae* were associations derived from antiquity, gaining strength and becoming more general in the Middle Ages as the central power of the state declined. There were *scholae* of notaries, of church singers, and of nearly every leading employment; there were *scholae* of foreigners of diverse nationalities, of Franks, Lombards, Greeks, Saxons, &c. Even the trades and crafts began to form *scholae*. These were at first very feeble institutions, and only later gained importance and became guilds. As early as the 8th century there were *scholae militum* in the army, which was thus doubly divided. But we have no precise definition of their functions. They were *de facto* corporations with separate property, churches, and magistrates of their own. The latter

Scholae militum.

were always *optimates*, and guarded the interests of the army. But the real chiefs of the bands or *numeri* were the *duces* or tribunes, and under the Franks the latter became *comites*. These chiefs were styled *magnifici consules*, *optimates de militia*, often too *judices de militia*, since, as was the custom of the Middle Ages, they wielded political and judicial as well as military authority. The title of consul was now generally given to superior officers, whether civil or military. The importance of the *scholae militum* began to decline in the 10th century; towards the middle of the 12th they disappeared altogether, and, according to Papencordt, were last mentioned in 1145. It is probable that the *scholae militum* signified local divisions of the army, corresponding with the city wards, which were twelve in number during the 10th and 11th centuries, then increased to thirteen, and occasionally to fourteen. It is certain that from the beginning the army was distributed under twelve flags; after the *scholae* had disappeared, we find it classified in districts, which were subdivided into companies. The division of cities into quarters, *sestieri* or *rioni*, corresponding with that of the army, and also with that of the municipal government, was the common practice of Florence, Siena, and almost all the Italian communes. But, while usually losing importance as the guilds acquired power, in Rome the insignificance of the guilds added to the strength of the *regioni* or *rioni*, which not only became part of the army but finally grasped the reins of government. This was a special characteristic of the political constitution of the Roman commune.

We now come to a question of weightier import for The all desiring to form a clear idea of the Roman govern- senate ment at that period. What had become of the senate? in the Middle Ages. It had undoubtedly lost its original character now that the empire was extinct. But, after much learned discussion, historical authorities are still divided upon the subject. Certain Italian writers of the 18th century—Vendettini, for example—asserted with scanty critical insight that the Roman senate did not disappear in the Middle Ages. The same opinion backed by much learned research was maintained by the great German historian Savigny. And Leo, while denying the persistence of the curia in Lombard Italy, adhered to Savigny's views as regarded Rome. Papencordt did the same, but held the Roman senate to be no more than a curia. This judgment was vigorously contested, first by Hegel and Giesebrecht, then by Gregorovius. These writers believe that after the middle of the 6th century the senate had a merely nominal existence. According to Gregorovius its last appearance was in the year 579. After that date it is mentioned in no documents, and the chroniclers are either equally silent or merely allude to its decay and extinction. In the 8th century, however, the terms *senator*, *senatores*, *senatus* again reappear. We find letters addressed to Pippin, beginning thus: *Omnia senatus atque universi populi generalitas*. When Leo III. returned from Germany he was met by *tam proceres clericorum cum omnibus clericis, quamque optimates et senatus, cunctaque militia* (see Anastasius, in Muratori, vol. iii. 198 c). But it has been noted that the senate was never found to act as a political assembly; on occasions when it might have been mentioned in that capacity we hear nothing of it, and only meet with it in ceremonials and purely formal functions. Hence the conclusion that the term senator was used in the sense of noble, *senatus* of nobility, and no longer referred to an institution but only to a class of the citizens. Even when we find that Otho III. (who sought to revive all the ancient institutions of Rome) addressed an edict to the "Consuls and Senate of Rome," and read that the laws of St Stephen

were issued *senatus decreto*, the learned Giesebrecht merely remarks that no important changes in the Roman constitution are to be attributed to the consuls and senate introduced by Otho III. Thus for the next glimpse of the senate we must pass to the 12th century, when it was not only reformed, as some writers believe, but entirely reconstituted.

But in this case a serious difficulty remains to be disposed of. Gregorovius firmly asserts that the nobles acquired great power between the 7th and 10th centuries, not only filling the highest military, judicial, and ecclesiastical offices, "but also directing the municipal government, presumably with the prefect at their head." He further adds:—"Notwithstanding the disappearance of the senate, it is difficult to suppose that the city was without governing magistrates, or without a council." Thus, after the 7th century, the optimates at the head of the army were also at the head of the citizens, and "formed a communal council in the same manner in which it was afterwards formed by the *banderesi*."¹ Now, if the nobles were called *senatores*, and the nobility *senatus*, and if this body of nobles met in council to administer the affairs of the republic, there is no matter for dispute, inasmuch as all are agreed that the original senate must have had a different character from the senate of the Middle Ages. And, since the absence of all mention of a prefect after the 7th century is not accepted as a proof of his non-existence, and we find him reappear under another form in the 8th century, so the silence as to the senate after the year 579, the fresh mention of it in the 8th century, and its reappearance in the 12th as a firmly reconstituted body reasonably lead to the inference that, during that time, the ancient senate had been gradually transformed into the new council. Its meetings must have been held very irregularly, and probably only in emergencies when important affairs had to be discussed, previously to bringing them before the parliament or general assembly of the people. Historians are better agreed as to the significance of the term *consul*. At first this was simply a title of honour bestowed on superior magistrates, and retained that meaning from the 7th to the 11th century, but was then—as in other Italian cities—only given to the chief officer of the state.

During this period the Roman constitution was very simple. The duke, commanding the army, and the prefect, presiding over the criminal court, were the chiefs of the republic; the armed nobility constituted the forces, filled all superior offices, and occasionally met in a council called the senate, though it had no resemblance to the senate of older times. In moments of emergency a general parliament of the people was convoked. This constitution differed little from that of the other Italian communes, where, in the same way, we find all the leading citizens under arms, a parliament, a council, and one or more chiefs at the head of the government.

But Rome had an element that was lacking elsewhere. We have already noted that, in the provinces, the administrators of church lands were important personages, and exercised during the Middle Ages, when there was no exact division of power, both judicial and political functions. It was very natural that the heads of this vast administration resident in Rome should have a still higher standing, and in fact, from the 6th century, their power increased to such an extent that in the times of the Franks they already formed a species of papal cabinet with a share and sometimes a predominance in the affairs of the republic. There were seven principal administrators, but two of them held the chief power,—the *primicerius notariorum* and the *secundicerius*, i.e., the first and under

secretaries of state. When, on the constitution of the new empire, these ministers were declared to be palatine or imperial as well as papal officials, the *primicerius* and the *secundicerius* were also in waiting on the emperor, who sat in council with them, when in Rome. Next came the *arcarius*, or treasurer; the *sacellarius*, or cashier; the *protoscriniarius*, who was at the head of the papal chancery; the *primus defensor*, who was the advocate of the church, and administered its possessions. Seventh and last came the *nomenclator*, or *adminiculator*, who pleaded the cause of widows, orphans, and paupers. There were also some other officials, such as the *vestiarius*, the *vicedominus* or steward, the *cubicularius* or majordomo, but these were of inferior importance. They were ecclesiastics, but not bound to be in priest's orders. The first seven were those specially known as *proceres clericorum* and oftener still as *judices de clero*, since they speedily assumed judicial functions and ranked among the chief judges of Rome. But as ecclesiastics they did not give decisions in criminal cases. Thus Rome had two tribunals, that of the *judices de clero*, or *ordinarii*, presided over by the pope, and that of the *judices de militia*, leaders of the army, dukes and tribunes, also bearing the generic title of consuls. First appointed by the exarch and then frequently by the pope, these decided both civil and criminal cases. In the latter they were sole judges under the presidency of the prefect.

The pope was thus at the head of a large administrative body with judicial and civil powers that were continually on the increase, and, in addition to his moral authority over Christendom, was possessed of enormous revenues. So in course of time he considered himself the real representative of the Roman republic. Gregory II. (715–731) accepted in the name of the republic the submission of other cities, and protested against the conquest by the Lombards of those already belonging to Rome. He seemed indeed to regard the territory of the duchy as the patrimony of the church. The duke was always at the head of the army, and, officially, was always held to be an imperial magistrate. But the empire was now powerless in Italy. Meanwhile the advance of the Lombards was becoming more and more threatening; they seized Ravenna in 751, thus putting an end to the exarchate, and next marched towards Rome, which had only its own forces and the aid of neighbouring cities to rely upon. To avoid being crushed by the brute force of a foreign nation unfit to rule, and only capable of oppression and pillage, it was necessary to make an energetic stand.

Accordingly the reigning pope, Stephen II. (752–757), appealed to Pippin, king of the Franks, and concluded with that monarch an alliance destined to inaugurate a new epoch of the world's history. The pope consecrated Pippin king of the Franks, and named him *patricius Romanorum*. This title, as introduced by Constantine, had no longer the ancient meaning, but now became a sign of lofty social rank. When, however, it was afterwards conferred on barbarian chieftains such as Odoacer and Theodoric, and then on the representative of the Byzantine empire in Italy, it acquired the meaning of a definite dignity or office. In fact the title was now given to Pippin as defender of the church, for the pope styled him at the same time *patricius Romanorum* and *defensor* or *protector ecclesiae*. And the king pledged himself not only to defend the church but also to wrest the exarchate and the Pentapolis from the Lombards and give them to Rome, or rather to the pope, which came to the same thing. This was considered as a restitution made to the head of the church, who was also the representative of the republic and the empire. And, to preserve the character of a restitution, the famous "donation of Constantine" was invented during this period (752–

Donation
of Pippin.

777). Pippin brought his army to the rescue (754-755) and fulfilled his promise. The pope accepted the donation in the name of St Peter, and as the visible head of the church. Thus in 755 central Italy broke its connexion with the empire and became independent; thus was inaugurated the temporal power of the papacy, the cause of so much subsequent warfare and revolution in Rome.

Its first consequences were speedily seen. In 767 the death of Paul I. was followed by a fierce revolt of the nobles under Duke Toto (Theodoro) of Nepi, who by violent means raised his brother Constantine to the chair of St Peter, although Constantine was a layman and had first to be ordained. For more than a year the new pontiff was a pliable tool in the hands of Toto and of the nobles. But the genuine papal faction, headed by a few judices de clero, asked the aid of the Lombards and made a formidable resistance. Their adversaries were defeated, tortured, and put to death. Toto was treacherously slain during a fight. The pope was blinded and left half dead on the highway. Fresh and no less violent riots ensued, owing to the public dread lest the new pope, Stephen IV. (768-772), elected by favour of the Lombards, should give them the city in return. But Stephen went over to the Franks, whom he had previously deserted, and his successor, Hadrian I. (772-795), likewise adhered to their cause, called the city to arms to resist king Desiderius and his Lombard hordes, and besought the assistance of Charlemagne. This monarch accordingly made a descent into Italy in 773, and not only gained an easy victory over Desiderius, but destroyed the Lombard kingdom and seized the iron crown. Entering Rome for the first time in 774, he confirmed and augmented the donation of Pippin by the addition of the dukedom of Spoleto. He returned several times to Italy and Rome, making new conquests and fresh concessions to Adrian I., until the death of the latter in 795.

Franks.

The position of Rome and of the pope is now substantially changed. Duke, prefect, militia, and the people exist as heretofore, but are all subordinate to the head of the church, who, by the donations of Pippin and Charlemagne, has been converted into a powerful temporal sovereign. Henceforth all connexion with Byzantium is broken off, but Rome is still the mainspring of the empire, the Roman duchy its sole surviving fragment in Italy, and the pope stands before the world as representative of both. And, although it is difficult to determine how this came about, the pope is now regarded and regards himself as master of Rome. In the year 772 he entrusts the *vestiarius* with judicial powers over the laity, ecclesiastics, freemen, and slaves *nostrae Romanae reipublicae*. He writes to Charlemagne that he has issued orders for the burning of the Greek ships employed in the slave trade, "in our city of Civita Vecchia" (Centumcellæ), and he always speaks of Rome and the Romans as "our city," "our republic," "our people." The donations of Pippin and Charlemagne are restitutions made to Saint Peter, the holy church, and the republic at the same time. It is true that Charlemagne held the supreme power, had an immensely increased authority, and actively fulfilled his duties as patricius. But his power was only occasionally exercised in Rome; it was the result of services rendered to the church, and of the church's continual need of his help; it was, as it were, the power of a mighty and indispensable ally. The pope, however, was most tenacious of his own authority in Rome, made vigorous protest whenever rebels fled to Charlemagne, or appealed to that monarch's arbitration, and contested the supremacy of the imperial officials in Rome. Yet the pope was no absolute sovereign, nor, in the modern sense of the term, did any then exist. He asserted supremacy over many lands which continually

rebelled against him, and which, for want of an army of his own, he was unable to reduce to obedience without others' help. Neither did the republic acknowledge him as its head. It profited by the growing power of the pope, could not exist without him, respected his moral authority, but considered that he usurped undue power in Rome. This was specially the feeling of the nobles, who had hitherto held the chief authority in the republic, and, being still the leaders of the army, were by no means willing to relinquish it. The Roman nobles were very different from other aristocratic bodies elsewhere. They were not, as they pretended, descendants of the Camilli and the Scipios, but neither were they a feudal aristocracy, inasmuch as the Teutonic element had as yet made small way among them. They were a mixture of different elements, national and foreign, formed by the special conditions of Rome. Their power was chiefly derived from the high offices and large grants of money and land conferred on them by the popes; but, as no dynasty existed, they could not be dynastic. Every pope aggrandized his own kindred and friends, and these were the natural and often open adversaries of the next pontiff and his favourites. Thus the Roman nobility was powerful, divided, restless, and turbulent; it was continually plotting against the pope, threatening not only his power, but even his life; it continually appealed to the people for assistance, stirred the militia to revolt, and rendered government an impossibility. Hence, notwithstanding his immense moral authority, the pope was the effective head neither of the aristocracy, the army, nor of the as yet unorganized lower classes. The lord of vast but often insubordinate territories, the recognized master of a capital city torn by internecine feud and plots against himself, he needed the support of an effective force for his own preservation and the maintenance of the authority proffered him from all quarters. Hence the necessity of creating an empire of the West, after having snapped every link with that of the East. Thus the history of Rome is still, as in the past, a history of continual strife between pope, emperor, and republic; and the city, while imbibing strength from all three, keeps them in perpetual tumult and confusion.

Leo III. (796-816) further strengthened the ties between Charlemagne and the church by sending the former a letter with the keys of the shrine of St Peter and the banner of Rome. Charlemagne had already joined to his office of patrician the function of high justice. The new symbols now sent constituted him *miles* of Rome and general of the church. The pope urged him to despatch an envoy to receive the oath of fealty, thus placing himself, the representative of the republic, in the subordinate position of one of the bishops who had received the immunities of counts. And all these arrangements took place without the slightest reference to the senate, the army, or the people. Much resentment was felt, especially by the nobles, and a revolution ensued headed by the primicerius Paschalis and the secundicerius Campulus, and backed by all who wished to liberate the city from the papal rule. During a solemn procession the pope was attacked and barbarously maltreated by his assailants, who tried to tear out his eyes and tongue (799). He was thrown into prison, escaped, and overtook Charlemagne at Paderborn, and returned guarded by ten of the monarch's envoys, who condemned to death the leaders of the revolt, reserving, however, to their sovereign the right of final judgment. Charlemagne arrived in December 800, and as high justice assembled a tribunal of the clergy, nobles, citizens, and Franks; he pronounced Leo to be innocent, and confirmed the capital-sentence passed on the rebels. But through the intercession of the pope, who dreaded the wrath of the nobles, this was presently com-

Charle-
magne
crowned
emperor.

mutated into perpetual exile. And finally on Christmas day, in St Peter's, before an assemblage of Roman and Frankish lords, the clergy, and the people, the pontiff placed the imperial crown on Charlemagne's head and all proclaimed him emperor.

Thus the new emperor was elected by the Romans and consecrated by the pope. But he was their real master and supreme judge. The pope existed only by his will, since he alone supplied the means for the maintenance of the temporal power, and already pretended to the right of controlling the papal elections. Yet Charlemagne was not sovereign of Rome; he possessed scarcely any regalia there, and was not in command of the army; he mainly represented a principle, but this principle was the law which is the basis of the state. The pope still nominated the Roman judges, but the emperor or his *missi* presided over them, together with those of the pope, and his decision was appealed to in last resort. During the Carolingian times no mention is found of the prefect, and it would seem that his office was filled by the imperial *missus*, or legate, the *judices de clero*, and *judices de militia*. The power of the pope was now entangled with that of the republic on the one hand and that of the empire on the other. The consequent confusion of sacred and secular functions naturally led to infinite complications and disputes.

The death of Charlemagne in 814 was the signal for a fresh conspiracy of the nobles against the pope, who, discovering their design, instantly put the ringleaders to death, and was severely blamed by Louis for this violation of the imperial prerogative. While the matter was under discussion the nobles broke out in fiercer tumults, both in Rome and the Campagna. At last, in 824, the emperor Lothair came to re-establish order in Rome, and proclaimed a new and noteworthy constitution, to which Pope Eugenius II. (824-27) gave his oath of adherence. By this the partnership of pope and emperor in the temporal rule of Rome and the states of the church was again confirmed. The more direct power appertained to the pope; the supreme authority, presidency of the tribunals, and final judgment on appeal to the emperor. The new constitution also established the right of contending parties to select either the Roman or the Teutonic code for the settlement of their disputes. During the Carolingian period it is not surprising that the commune should have been, as it were, absorbed by the church and the empire. In fact it is scarcely mentioned in history throughout that time. And when, no longer sustained by the genius of its founder, the Frankish empire began to show signs of dissolution, the popes, finding their power thereby strengthened, began to assume many of the imperial attributes. Soon, however, as a natural consequence of the loss of the main support of the papacy, the nobles regained vigour and were once more masters of the city. Teutonic and feudal elements had now largely penetrated into their organization. The system of granting lands, and even churches and convents, as benefices according to feudal forms, became more and more general. It was vain for the popes to offer opposition, and they ended by yielding to the current. The fall of the Frankish empire left all Italy a prey to anarchy, and torn by the faction fights of Berengar of Friuli and Guido of Spoleto, the rival claimants to the crowns of Italy and the empire. The Saracens were advancing from the south, the Huns from the north; the popes had lost all power; and in the midst of this frightful chaos a way was opened for the rise of the republics. Anarchy was at its climax in Rome, but the laity began to overpower the clergy to such an extent that the *judices de militia* prevailed over the *judices de clero*. For a long time no imperial *missi* or legates had been seen, and the papacy was incredibly lowered. The election of the popes had

positively fallen into the hands of certain beautiful women notorious for their evil life and depravity. The aristocracy alone gained strength; now freed from the domination of the emperor, it continually wrested fresh privileges from the impotent pontiffs, and became organized as the ruling force of the republic. Gregorovius, notwithstanding his denial of the continuation of the senate after the 6th century, is obliged to acknowledge that it appeared to have returned to life in the power of this new baronage. And, although this body was now permeated with the feudal principle, it did not discard its ancient traditions. The nobles claimed to be the main source of the empire; they wished to regain the dignity and office of patricius, and to make it, if possible, hereditary in their families. Nothing is known of their system of organization, but it seems that they elected a chief bearing the title of *consul*, *senator*, *princeps Romanorum*, who was officially recognized by the pope, as a patricius presided over the tribunals, and was the head of the commune.

Theophylact was one of the first to assume this dignity. His wife Theodora, known as the *senatrix*, was one of the women then dominating Rome by force of their charms and licentiousness. She was supposed to be the concubine of Pope John X. (914-928), whose election was due to her influence. Her daughter Marozia, in all things her worthy rival, was married to Alberic, a foreign mercenary of uncertain birth who rose to a position of great influence, and, although an alien, played a leading part in the affairs of the city. He helped to increase the power of Theophylact, who seemingly shared the rule of the city with the pope. In the bloody war that had to be waged against the Saracens of southern Italy, and at the defeat of the latter on the Garigliano (916), Theophylact and Alberic were the Roman leaders, and distinguished themselves by their valour. They disappeared from the scene after this victory, but Marozia retained her power, and bore a son Alberic, who was destined to greater deeds. The pope found himself caught in this woman's toils, and struggled to escape, but Marozia, gaining fresh influence by her marriage with Hugo, margrave of Tuscany, imprisoned the pontiff himself in Castle St Angelo (928). This fortress was the property of Marozia and the basis of her strength. The unfortunate John died within its walls. Raised to the chair by Theodora, he was deposed and killed by her daughter. The authority of the latter reached its culminating point in 931, when she succeeded in placing her son John XI. on the papal throne. On the death of her second husband she espoused Hugo of Provence, the same who in 928 had seized the iron crown at Pavia, and now aspired to the empire. Dissolute, ambitious, and despotic, he came to Rome in 932, and, leaving his army outside the walls, entered Castle St Angelo with his knights, instantly began to play the tyrant, and gave a blow to Alberic his stepson, who detested him as a foreign intruder. This blow proved the cause of a memorable revolution; for Alberic rushed from the castle and harangued the people, crying that the time was come to shake off the tyrannous yoke of a woman and of barbarians who were once the slaves of Rome. Then, putting himself at the head of the populace, he closed the city gates to prevent Hugo's troops from coming to the rescue, and attacked the castle. The king fled; Marozia was imprisoned, Alberic proclaimed lord of the Romans, and the pope confined to the Lateran in the custody of his own brother. Rome was again an independent state, a republic of nobles. Rid of the temporal dominion of emperor and pope, and having expelled the foreigners with great energy and courage, it chose Alberic for its chief with the title of *princeps atque omnium Romanorum senator*. The tendency of the Roman republic to elect a supreme authority, first mani-

of the
commune.

fested in the case of Theophylact, was repeated in those of Alberic, Brancalione, Crescenzo, Cola di Rienzo, and others. One of the many causes of this tendency may be traced to the conception of the new empire of which Rome was the original and enduring fountainhead. As Rome had once transferred the empire from Byzantium to the Franks, so Rome was surely entitled to reclaim it. The imperial authority was represented by the office of patrician, now virtually assumed by Alberic. That he gave the name of Octavian to his son is an additional proof of this fact. In the Eternal City the mediæval political idea has always the aspect of a resurrection or transformation of classic antiquity. This is another characteristic of the history of the Roman commune.

Alberic's strength was due to his connexion with the nobility, to his father's valiant service against the Saracens at the battle of Garigliano, and to the militia under his command, on which everything depended amid the internal and external dangers now threatening the new state. As yet no genuine municipal constitution was possible in Rome, where neither the people nor the wealthy burghers engaged in industry and commerce had any fixed organization. All was in the hands of the nobles, and Alberic, as their chief, frequently convened them in council, although obliged to use pressure to keep them united and avoid falling a prey to their disputes. Hence the whole power was concentrated in his grasp; he was at the head of the tribunals as well as of the army. The *judices de clero* and *judices de militia* still existed, but no longer met in the Lateran or the Vatican, under the presidency of emperor and pope or their missi. Alberic himself was their president; and, a still more significant fact, their sittings were often held in his private dwelling. There is no longer any mention of prefect or patricius. The papal coinage was inscribed with Alberic's name instead of the emperor's. His chief attention was given to the militia, which was still arranged in *scholæ*, and it is highly probable that he was the author of the new division of the city into twelve *regions*, with a corresponding classification of the army in as many regiments under twelve flags and twelve *banderesi*, one for every region. The organization of the *scholæ* could not have been very dissimilar, but doubtless Alberic had some important motive for altering the old method of classification. By means of the armed regions he included the people in the forces. It is certain that after his time we find the army much changed and far more democratic. It was only natural that so excellent a statesman should seek the aid of the popular element as a defence against the arrogance of the nobles, and it was requisite to reinforce the army in order to be prepared for the attacks threatened from abroad. This change effected, Alberic felt prepared for the worst, and began to rule with energy, moderation, and justice. His contemporaries award him high praise, and he seems to have been exempt from the vices of his mother and grandmother.

In 933 Hugo made his first attack upon the city, and was repulsed. A second attempt in 936 proved still more unfortunate, for his army was decimated by a pestilence. Thoroughly disheartened, he not only made peace, but gave his daughter in marriage to Alberic, thus satisfying the latter's desire to ally himself with a royal house. But this union led to no conciliation with Hugo. For Alberic, finding his power increased, marched at the head of his troops to consolidate his rule in the Campagna and the Sabine land. On the death of his brother, Pope John XI., in 936, he controlled the election of several successive popes, quelled a conspiracy formed against him by the clergy and certain nobles instigated by Hugo, and brilliantly repulsed, in 941, another

attack by that potentate. At last, however, this inveterate foe withdrew from Rome, being summoned to the north by the victories of his rival Berengarius. But Alberic, after procuring the election of various popes who were docile instruments of his will, experienced a check when Agapetus II. (946-955), a man of firmness and resource, was raised to the papal throne. The fortunes of Berengarius were now in the ascendant. In 950 he had seized the iron crown, and ruled in the Pentapolis and the exarchate. This being singularly painful to the pope, he proceeded to make alliance with all those enemies of Berengarius preferring a distant emperor to a neighbouring and effective sovereign, with the Roman nobles who were discontented with Alberic, and with all who foresaw danger, even to Rome, from the extended power of Berengarius. And Agapetus recurred to the old papal policy, by making appeal to Otho I., whose rule in Germany was distinguished by a prestige almost comparable with that of Charlemagne.

Otho immediately responded to the appeal and descended into Italy; but his envoys were indignantly repulsed by Alberic, and, being prudent as well as firm, he decided to wait a more opportune moment for the accomplishment of his designs. Meanwhile Alberic died in 954, and the curtain fell on the first great drama of the Roman republic. He had reigned for twenty-two years with justice, energy, and prudence; he had repelled foreign invaders, maintained order and authority. He seems, however, to have realized that the aspect of affairs was about to change, that the work he had accomplished would be exposed to new dangers. These dangers, in fact, had already begun with the accession of an enterprising pope to the Holy See. The name of Octavian given by Alberic to his son leads to the inference that he meant to make his power hereditary. But, suddenly, he began to educate this son for the priesthood, and, assembling the nobles in St Peter's shortly before his death, he made them swear to elect Octavian as pope on the decease of Agapetus II. They kept their word, for in this way they freed themselves from a ruler. Possibly Alberic trusted that both offices might be united, and that his son would be head of the state as well as the church. But the nobles knew this to be a delusion, especially in the case of a nature such as Octavian's. The lad was sixteen years old when his father died, received princely honours until the death of Agapetus, and was then elected pope with the name of John XII. He had inherited the ungoverned passions of his grandmother Marozia and great-grandmother Theodora, but without their intelligence and cunning. His palace was the scene of the most scandalous licence, while his public acts were those of a baby tyrant. He conferred a bishopric on a child of ten, consecrated a deacon in a stable, invoked Venus and Jupiter in his games, and drank to the devil's health. He desired to be both pope and prince, but utterly failed to be either. Before long, realizing the impossibility of holding in check Berengarius, who still ruled over the exarchate, he sought in 960 the aid of Otho I., and promised him the imperial crown. Thus the new ruler was summoned by the son of the man by whom he had been repulsed. Otho vowed to defend the church, to restore her territories, to refrain from usurping the power of the pope or the republic, and was crowned on the 2d February 962 with unheard-of pomp and display.

Accordingly, after being extinct for thirty-seven years, the empire was revived under different but no less difficult conditions. The politico-religious unity founded by Charlemagne had been dissolved, partly on account of the heterogeneous elements of which it was composed, and partly because other nations were in course of formation.

Otho I.
crowned
emperor.

Now too the feudal system was converting the officers of the empire into independent princes, and the new spirit of communal liberty was giving freedom to the cities. Otho once more united the empire and the church, Italy and Germany, in order to combat these new foes. But the difficulties of the enterprise at once came to light. John XII., finding a master in the protector he had invoked, now joined the discontented nobles who were conspiring with Berengarius against the emperor. But the latter hastened to Rome in November 963, assembled the clergy, nobles, and heads of the people, and made them take an oath never again to elect a pope without his consent and that of his son. He also convoked a synod presided over by himself in St Peter's, which judged, condemned, and deposed Pope John and elected Leo VIII. (963-965), a Roman noble, in his stead. All this was done at the direct bidding of the emperor, who thus deprived the Romans of their most valued privilege, the right of choosing their own pope. But the people had now risen to considerable importance, and, for the first time, we find it officially represented in the synod by the plebeian Pietro, surnamed Imperiola, together with the leaders of the militia, which had also become a popular institution since Alberic's reign. It was no longer easy to keep the lower orders in subjection, and by their junction with the malcontent nobles they formed a very respectable force. On the 3d January 964 they sounded the battle-peal and attacked the Vatican, where the emperor was lodged. The German knights repulsed them with much slaughter, and this bloodshed proved the beginning of an endless feud. Otho departed in February, and John XII., as the chosen pope of the Romans, returned with an army of followers and compelled the defenceless Leo VIII. to seek safety in flight. Soon afterwards Leo was deposed and excommunicated by a new synod, and many of his adherents were cruelly murdered. But on the 14th May 964 John suddenly expired; the Romans, amid violent struggles and tumults, resumed their rights, elected Benedict V. and procured his consecration in spite of the emperor's veto. Otho now appeared at the head of an army, committed fresh slaughter, besieged the city, reduced it by famine, and, after holding a council which deposed Benedict and sent him a prisoner to Hamburg, restored Leo VIII. to the papal throne.

But, although the emperor thus disposed of the papacy at his will, his arbitrary exercise of power roused along and obstinate resistance, which had no slight effect upon the history of the commune. Leo VIII. died in 965, and the imperial party elected John XIII. (965-972). Upon this the nobles of the national party joined the people, and there was a general revolt. The nobles were led by Pietro, prefect of Rome. As we have noted, this office seemed to be extinct during the Carolingian rule, but we again meet with it in 955, after an interval of a century and a half. The leaders of the people were twelve *decarconi*, a term of unknown derivation, but probably indicating chiefs of the twelve regions (*dodecarchi*, *dodecarconi*, *decarconi*). The new pope was seized and confined, first in Castle St Angelo, then in a fortress in the Campagna. But the emperor quickly marched an army against Rome, and this sufficed to produce a reaction which recalled the pope (November 966), sent the prefect into exile, and put several of the rebellious nobles to death. And shortly after the emperor sacked the city. Many Romans were exiled, some tortured, others, including the twelve *decarconi*, killed. John XIII. died in 972 and Otho in 973.

All these events clearly prove how great a change had now taken place in the conditions of Rome. The people (*plebs*) had made its appearance upon the stage; the army had become democratic; the twelve regions were regularly organized under leaders. Opposed to them stood the

nobles, headed by the prefect, also a noble, precisely as in Florence the nobles and the podestà were later opposed to the guilds and the people. So far, it is true, nobles and people had made common cause in Rome; but this harmony was soon to be interrupted. The feudal spirit had made its way among the Roman aristocrats, had split them into two parties and diminished their strength. It was now destined to spread, and, as it was always vigorously detested and opposed by the people elsewhere in Italy, so the same consequence was inevitable in Rome. Another notable change, and a subject of unending controversy, had also occurred in the administration of justice. So far there were the *judices de clero*, also known as ordinary or palatine judges, and the *judices de militia*, also styled consules or duces. These judges generally formed a court of seven, three being *de clero*, four *de militia*, or *vice versa*, under the presidency of the papal or imperial missi. In criminal cases the *judices de militia* had the prefect or the imperial missus for their president. But there was a third order of judges called *pedanei*, a *consulibus creati*. It seems clear that the duces, being *distributi per judicatus*, found themselves isolated in the provinces, and to obtain assistance nominated these *pedanei*, who were legal experts. In Rome, with its courts of law, they were less needed, but possibly in those sections of the city where cases of minor importance were submitted to a single magistrate reference was made to the *pedanei*. But many changes were made under the Franks, and when the edict of Lothair (824) granted free choice of either the Roman or Germanic law, and the duces were replaced by *comites* and *gastaldiones*, chiefly of German origin, the use of legal experts became increasingly necessary. And the custom of employing them was the more easily diffused by being already common among the Franks, whose *scabini* were legal experts acting as judges, though not qualified to pass sentence. Thus the *pedanei* multiplied, came to resemble the *scabini*, and were designated *judices dativi* (a *magistratu dati*) or simply *dativi*. These were to be found in the exarchate in 838, but not in Rome until 961, when the *judices de militia* had ceased to exist. The great progress of the German legal procedure may then have contributed to the formation of the new office.

Meanwhile Pope John XIII. had been succeeded by Benedict VI. (973-974) and Otho I. by his son Otho II., a youth of eighteen married to the Byzantine princess Theophano. Thereupon the Romans, who had supported the election of another pope, and were in no awe of the new emperor, rose to arms under the command of Crescenzo, a rich and powerful noble. They not only seized Benedict VI. by force, but strangled him in Castle St Angelo. The national and imperial parties then elected several popes who were either exiled or persecuted, and one of them was said to be murdered. In 985 John XV. was elected (985-996). During this turmoil, the national party, composed of nobles and people, led by Giovanni Crescenzo, son of the other Crescenzo mentioned above, had taken complete possession of the government. This Crescenzo assumed the title of patrician, and sought to imitate Alberic, although far his inferior in capacity. Fortunately for him the reigning pope was a detested tyrant, and the emperor a child entirely guided by his mother. But the new emperor Otho III. was backed by a powerful party, and on coming to Rome in 996 was able, although only aged fifteen, to quell the rebellion, oust Crescenzo from public life, and elect as successor to John XV. his own cousin, Pope Gregory V. (996-999). But this first German pope surrounded himself with compatriots, and by raising them to lofty posts even in the tribunals excited a revolt that

Rising importance of the people.

Another revolution.

Judices dativi.

Giovanni Crescenzo.

drove him from the throne (29th September 996). Crescenzo, being master of Castle St Angelo, resumed the title of patrician or consul of the Romans, expelled the German judges, reconstituted the government, prepared his troops for defence, and created a new pope. But the following year Otho III. came to Rome, and his party opened the gates to him. Although deserted by nearly all his adherents, Crescenzo held the castle valiantly against its besiegers. At last, on the 29th April 998, he was forced to make terms, and the imperialists, violating their pledges, first put him to torture and then hurled him from the battlements. Gregory V. dying shortly after these events, Sylvester II., another German, was raised to the papacy (999-1003).

Otho III. Thus Otho III. was enabled to establish his mastery of Rome. But, as the son of a Greek mother, trained amid Greek influences, his fantastic and contradictory nature seemed only to grasp the void. He wished to reconstitute a Romano-Byzantine empire with Rome for his capital. His discourse always turned on the ancient republic, on consuls and senate, on the might and grandeur of the Roman people; and his edicts were addressed to the senate and the people. The senate is now constantly mentioned, and its heads bear the title of consuls. The emperor also gave renewed honour to the title of patrician, surrounded himself with officials bearing Greek and Roman designations, and raised the prestige of the prefect, who, having now almost the functions of an imperial vicar, bore the eagle and the sword as his insignia. Nevertheless Otho III. was thoroughly German, and during his reign all Germanic institutions made progress in Rome. This was particularly the case with feudalism, and Sylvester II. was the first pope to treat it with favour. Many families of real feudal barons now arose. The Crescenzii held sway in the Sabine hills, and Præneste and Tusculum were great centres of feudalism in the 11th century. The system of feudal benefices was recognized by the church, which made grants of lands, cities, and provinces in the feudal manner. The bishops, like feudal barons, became actual counts. And, in consequence of these changes, when the emperor, as head of the feudal system, seeks to impose his will upon the church (which has also become feudal) and control the papal elections, he is met by the great question of the investitures, a question destined to disturb the whole world. Meanwhile the Roman barons were growing more and more powerful, and were neither submissive nor faithful to the emperor. On the contrary they resented his attitude as master of Rome, and, when he subjected Tivoli to the Holy See, attacked both him and the pope with so much vigour as to put both to flight (16th February 1001). Thereupon Rome again became a republic, headed by Gregory of Tusculum, a man of a powerful family claiming descent from Alberic.

By the emperor's death in January 1002 the race of the Othos became extinct, the papacy began to decline, as at the end of the Carolingian period, and the nobles, divided into an imperial and a national party, were again predominant. They reserved to themselves the office of patrician, and, electing popes from their own ranks, obtained enlarged privileges and power. At the time when Ardoin, marquis of Ivrea, profiting by the extinction of the Othos and the anarchy of Germany, was stirring Italy in the vain hope of constituting a national kingdom, the Roman republic was being consolidated under another Giovanni Crescenzo, of the national faction. He was now elected patrician; one of his kinsmen was invested with the office of prefect, and the new pope John XVIII. (1003-9) was one of his creatures. Although the power of Henry of Bavaria was then gaining ascendancy in Germany, and giving strength to the imperialist nobles, Crescenzo

still remained supreme ruler of the city and the Campagna. Surrounded by his judges, the senators, and his kinsman the prefect, he continued to dispense justice in his own palace until his death in 1012, after ten years' rule. And, Pope Sergius IV. having died the same year, the counts of Tusculum compassed the election of Benedict VIII. (1012-24), one of their own kin. This pope expelled the Crescenzii, changed the prefect, and reserved the title of patrician for Henry II., whom he consecrated emperor on the 14th February 1014. A second Alberic, bearing the title of "eminentissimus consul et dux," was now at the head of the republic and dispensed *placita* in the palace of his great ancestor, from whom the counts of Tusculum were also descended.

The new emperor endeavoured to re-establish order in Henry Rome, and strengthen his own authority together with II. that of the pope. But the nobles had in all things the upper hand. They were regularly organized under leaders, held meetings, asserted their right to nominate both pope and emperor, and in fact often succeeded in so doing. Even Henry II. himself was obliged to secure their votes before his coronation. The terms senate and senator now recur still more frequently in history. Nevertheless, Benedict VIII. succeeded in placing his own brother, Romano, at the head of the republic with the title of "consul, dux, and senator," thus making him leader of the nobles, who met at his bidding, and chief of the militia and the tribunals. The prefect still retained his authority, and the emperor was by right supreme judge. But, a violent revolt breaking out, the emperor only stayed to suppress it and then went to Germany in disgust. The pope, aided by his brother, conducted the government with energy; he awed the party of Crescenzo, and waged war against the Saracens in the south. But he died in 1024, and in the same year Henry II. was succeeded by Conrad II. There was now beheld a repetition of the same strange event that had followed the death of Alberic, and with no less fatal consequences. Benedict's brother Romano, head of the republic, and still retaining office, was, although a layman, elected pope. He took the name of John XIX. (1024-33), and in 1027 conferred the imperial crown on Conrad the Salic, who, abolishing the Lothairian edict of 824, decreed that throughout Rome and its territory justice should be henceforth administered solely by the Justinian code. Thus, notwithstanding the spread of feudalism and Germanic procedure, the Roman law triumphed through the irresistible force of the national character, which was already manifested in many other ways.

Meanwhile John XIX. was succeeded by his nephew, Benedict IX. (1033-45), a lad of twelve, who placed his own brother at the head of the republic. Thus church and state assumed the aspect of hereditary possessions in the powerful house of the counts of Tusculum. But the vices and excesses of Benedict were so monstrous that the papacy sank to the lowest depth of corruption; there followed a series of tumults and reactionary attempts, and so many conflicting elections that in 1045 three popes were struggling for the tiara in the midst of scandal and anarchy. The streets and neighbourhood of Rome swarmed with thieves and assassins; pilgrims were plundered; citizens trembled for their lives; and a hundred petty barons threatened the rival popes, who were obliged to defend themselves by force. This state of things lasted until Henry III. came to re-establish order. He appointed a synod to depose the three popes, and then, with the consent of the wearied and anarchy-stricken Romans, assuming the right of election, proposed a German, Clement II., who was consecrated at Christmas 1046. Henry III. was then crowned, and also took the title of patrician. Thus the

emperor was lord over church and state. This, however, stirred both people and pope against him, and led to the terrible contest of the investitures, although for the moment the Romans, being exhausted by past calamities, seemed not only resigned but contented.

Hildebrand and the question of investiture.

In fact, the idea of reform and independence was already germinating in the church and was soon to become tenacious and irresistible. Hildebrand was the prompter and hero of this idea. He sought to abolish the simony and concubinage of the priesthood, to give the papal elections into the hands of the higher ecclesiastics, and to emancipate the church from all dependence on the empire. Henry III. procured the election of four German popes in succession, and Hildebrand was always at hand to inspire their actions and dominate them by his strength of intellect and still greater strength of will. But the fourth German pope, Victor II., died in 1057, and Henry III. had been succeeded in 1056 by the young Henry IV. under the regency of a weak woman, the empress Agnes. Hildebrand seized this favourable moment for trying his strength and procured the election of Stephen IX. (1057-58), a candidate he had long had in view. Stephen, however, died in 1058; the nobles instantly rose in rebellion; and Gregory of Tusculum, who had assumed the patriciate, caused an incapable cousin to be named pope (Benedict X.). Upon this Hildebrand postponed his design of maintaining the papacy by the help of Italian potentates and had recourse to the empress. In a synod held at Siena with her consent Benedict was deposed and Nicholas II. (1059-61) elected in his stead. This pope entered Rome escorted by the troops of Godfrey of Tuscany, and, when also assured of help from Naples, assembled a council of one hundred and thirteen bishops (1059), who condemned the deposed pontiff and renewed the prohibition of simony and concubinage among the priesthood. Finally Nicholas instituted the college of cardinals, entrusting it with the election of the pope, who was in future to be chosen from its ranks. The assent of the clergy and people was left purely formal. The decree also contained the proviso—"saving the honour and reverence due to the emperor"; but this too was an empty expression.

The new decree was a master-stroke of Hildebrand's genius, for by means of it he placed the papal election in the hands of a genuine ecclesiastical senate and gave a monarchical form to the church. Backed by the Normans who were in Rome, and whose commander, Richard of Capua, did not scruple to strike off the heads of many recalcitrant nobles, Hildebrand and the pope could now pursue their work of reform. Nevertheless the nobles again revolted on the death of Nicholas II. in 1061, and declared their purpose of restoring to Henry IV. the patriciate and right of election; but Hildebrand, by speedily convoking the cardinals, procured the election of Alexander II. (1061-73). This pope, although friendly to the empire, did not await the imperial sanction, but, protected by the Romans, at once entered the Lateran and put some other riotous nobles to death. The German bishops, however, elected Honorius II., who had the support of the barons. Thus the city was split into two camps and a deadly civil war ensued, terminating, despite the vigorous resistance of the nobility, in the defeat of Honorius II. But the nobles persevered in the contest and were the real masters of Rome. By conferring the patriciate on the emperor, as their feudal chief, they hoped to organize themselves under the prefect, who now, with greatly increased authority, presided over both the civil and criminal courts in the absence of the pope's representative. In a general assembly the Romans elected their prefect, whose investiture was granted by the emperor, while the pope elected another. Thus disorder was brought to a climax.

Alexander died on the 21st April 1073, and thereupon Gregory VII. (1073-85). He reconfirmed his predecessors' decrees, dismissed all simoniacal and non-celibate priests, and then in a second council (1075) forbade the clergy to receive investiture at the hands of laymen. No bishop nor abbot was again to accept ring or crozier from king or emperor. Now, as ecclesiastical dignities included the possession of extensive benefices, privileges, and feudal rights, this decree gave rise to tremendous dispute and to fierce contest between the empire and the church. The nobles took a very decided part in the struggle. With Cenci, their former prefect, at their head, they rose in revolt, assailed the pope on Christmas day 1075, and threw him into prison. But their fear of the popular wrath compelled his speedy release; and he then decreed the excommunication and deposition of the emperor who had declared him deposed. That monarch afterwards made submission to Gregory at Canossa (1077), but, again turning against him, was again excommunicated. And in 1081 he returned to Italy bringing the antipope Clement III., and besieged Rome for forty days. Assembling the nobles in his camp, he there arranged a new government of the city with prefect and senate, palatine judges, and other magistrates, exactly similar to the existing government within the walls. He then took his departure, returned several times in vain, but at last forced his way into the city (March 1084), and compelled Gregory VII. to seek refuge in Castle St Angelo. The emperor was then master of Rome, established the government he had previously arranged, and, calling a parliament of nobles and bishops, procured the deposition of Gregory and the consecration of Clement III., by whom he was crowned in 1084. He then attacked and seized the Capitol, and assaulted the castle in order to capture the pope. But Robert Guiscard brought his army to the rescue. Emperor and anti-pope fled; the city was taken, the pope liberated, and Rome reduced to ruin by fire and pillage. Upon this Gregory VII., broken with grief, went away with the Normans, and died at Salerno on the 25th May 1085. He had separated the church from the people and the empire by a struggle that, as Gregorovius says, disturbed the deep sleep of the Middle Ages.

Pope Paschal II. (1099-1118) found himself entirely at the mercy of the tyrannous nobles who were alike masters of Rome, of its government, and its spiritual lord. As they were divided among themselves, all the pope could do was to side with one party in order to overcome the other. With the help of his own nephew Gualfredo, the prefect Pietro Pierleone, and the Frangipani, he was able to keep down the Corsi, and hold the Colonna in check. Being compelled to repair to Benevento in 1108, he left Gualfredo to command the militia, Tolomeo of Tusculum to guard the Campagna, and the consuls Pierleone and Leone Frangipani, together with the prefect, in charge of the government. The consulship was no longer a mere title of honour. The consuls seem to have been elected, as at Ravenna, in imitation of those of the Lombard cities, and were at the head of the nobles and senate. The expressions "*præfectus et consules*," "*de senatoribus et consulibus*," are now of frequent occurrence. We have no precise knowledge of the political organization of the city at this moment; but it was an aristocratic government, similar to that originally formed in Florence, as Villani tells us, with a senate and consuls. The nobles were so completely the masters that the pope, in spite of having trusted them with the government, could only return to Rome with the aid of the Normans. Being now absorbed in the great investiture question, he had recourse to a daring plan. He proposed to Henry V. that the bishop

should resign all property derived from the crown and depend solely on tithes and donations, while the empire should resign the right of investiture. Henry seemed disposed to accept the suggestion, but, suddenly changing his mind, took the pope prisoner and forced him to yield the right of investiture and to give him the crown (1111). But the following year the party of reform annulled in council this concession, which the pope declared to have been extorted by force. By the death of Countess Matilda in 1115 and the bequest of her vast possessions to the Holy See, the pope's dominions were greatly enlarged, but his authority as a ruler was nowise increased. Deeds of violence still continued in Rome; and then followed the death of the prefect Pietro. The nobles of the imperial party, joined with the people, wished to elect Pietro's son, also nephew to Tolomeo of Tusculum, who then held the position of a potent imperial margrave, had territories stretching from the Sabine mountains to the sea, was the dictator of Tusculum, master of Latium, and consul of the Romans. The pope opposed this election to the best of his strength; but the nobles carried the day, and their new prefect received investiture from the emperor. Upon this the pope again quitted Rome, and on his return, two years later, was compelled to shut himself up in Castle St Angelo, where he died in 1118.

New
power
of the
people.

The popes were now the sport of the nobles whom they had aggrandized by continual concessions for the sake of peace. And peace seemed at hand when Innocent II. (1130-43), after triumphing over two antipopes, came to terms with Roger I., recognized him as king of Sicily, and gained his friendship and protection. But now still graver tumults took place. In consequence of the division of the nobles neither party could overcome its foes without the aid of the people, which thus became increasingly powerful. Throughout Upper and Central Italy the cities were being organized as free and independent communes on a democratic basis. Their example was soon followed in the ancient duchy of Rome and almost in the immediate neighbourhood of the city. Even Tivoli was converted into a republic. This excited the deepest jealousy in the Romans, and they became furious when this little city, profiting by its strong position in the Teverone valley, not only sought to annex Roman territory, but dared to offer successful resistance to the descendants of the conquerors of the world. In 1141 Tivoli openly rebelled against the mother city, and the pope sent the Romans to subdue it. They were not only repulsed, but ignominiously pursued to their own gates. Afterwards, returning to the assault in greater numbers, they conquered the hostile town. Its defenders surrendered to the pope, and he immediately concluded a treaty of peace without consulting either the people or the republic. The soldiery, still flushed with victory, were furious at this slight. They demanded not only the submission of Tivoli to the Roman people, but also permission to demolish its walls and dwellings and expel its population. Innocent II. refused consent to these excesses, and a memorable revolution ensued by which the temporal power of the papacy was entirely overthrown.

Popular
revolu-
tion.
Recon-
struction
of senate
and re-
public.

In 1143 the rebellious people rushed to the Capitol, proclaimed the republic, reconstituted the senate, to the almost entire exclusion of the nobles, declared the abolition of the temporal power, issued coin inscribed to the senate, the people, and St Peter, and began to reckon time from the day of the restoration of liberty. Arnold of Brescia was not, as has been incorrectly stated, the author of this revolution, for he had not yet arrived in Rome. It was the outcome of an historic necessity—above all of the renewed vigour of the people and its detestation of the feudal aristocracy. This body, besides being divided into an imperial and a national party, had almost excluded from

the government the powerful baronage of the Campagna and the provinces. Also, as we have before noted, the Roman aristocracy was by no means an exclusive caste. Between the great aristocrats and the people there stood a middle or new nobility, which made common cause with the people, whose chief strength now lay in the army. This, divided into twelve and then into thirteen or fourteen regions, assembled under its banners all arm-bearing citizens. Thus the *exercitus* was also the real *populus Romanus*, now bent on the destruction of the temporal power. This purpose, originating in the struggle of the investitures, was the logical and inevitable result of the proposals of Paschal II., which, despite their rejection, found a loud echo in Italy. Lucius II. (1144-45) tried to withstand the revolution by seeking Norman aid and throwing himself into the arms of the feudal party, but this only precipitated the course of events. The people, after having excluded nearly all aristocrats from the senate, now placed at its head the noble Giordano dei Pierleoni, who had joined the revolutionary party. They named him patrician, but without prejudice to the authority of the empire, still held by them in respect, and also conferred on him the judicial powers appertaining to the aristocratic and imperial office of prefect. The pope was requested to resign the temporal power, the regalia, and every other possession, and content himself with the tithes and offerings of the faithful according to the scheme of Paschal II. He indignantly refused, marched at the head of the nobles against the Capitol, but was violently repulsed, and received a blow on the head from a stone, which is supposed to have occasioned his speedy death on the 15th February 1145. Eugenius III. was then elected (1145-53), but soon had to fly to Viterbo in quest of armed assistance, in consequence of the senate's resolve to forcibly prevent his consecration until he recognized the new state of things in the Eternal City.

It was at this moment that Arnold of Brescia arrived in Rome. His ideas, already well known in Italy, had inspired and promoted the Roman revolution, and he now came to determine its method and direction. Born at Brescia in the beginning of the 12th century, Arnold had studied in France under the celebrated Abelard, who had instructed him in theology and philosophy, inspired him with a great love for antiquity, and stimulated his natural independence of mind. On returning to his native land he assumed the monkish habit, and proved the force and fervour of his character by taking part in all struggles for liberty. And, together with political reform, he preached his favourite doctrine of the necessary renunciation by the clergy of all temporal wealth. Expounded with singular eloquence, these doctrines had a stirring effect on men's minds, spread throughout the cities of northern Italy, and were echoed on all sides. It seems undoubted that they penetrated to Rome and helped to promote the revolution, so that Arnold was already present in spirit before he arrived there in person. It is known that at the Lateran council of 1139 Innocent II. had declared these doctrines to be inimical to the church and enjoined silence on their author. And, as at that time the party hostile to liberty was triumphant in Brescia, Arnold left his native place, crossed the Alps, and returned to France, where other struggles awaited him. He professed no anti-Catholic dogmas,—only maintaining that when the pope and the prelacy deviated from the gospel rule of poverty they should not be obeyed, but fearlessly opposed. In France, finding his master, Abelard, exposed to the persecutions of St Bernard, he assumed his defence with so much ardour that St Bernard directed the thunders of his eloquence against the disciple as well as the master, saying of the former, "He neither eats nor drinks,

suffers hunger, and, being leagued with the devil, only thirsts for the blood of souls." In 1142 we find Arnold a wanderer in Switzerland, and then, suddenly reappearing in Italy, he arrived in Rome.

Three different elements entered into his nature and inspired his eloquence—an exalted and mystic temperament, a great and candid admiration for classic antiquity added to an equal admiration for republican freedom independent of the church and the empire, and a profound conviction, derived from the Vaudois and Paterine doctrines, that the church could only be purified by the renunciation of temporal wealth. Finding Rome already revolutionized in accordance with his own ideas, he immediately began to preach there. His mystic exhortations against the riches of the church had an inflammatory effect, while his classical reminiscences aroused the enthusiasm of the Romans, and his suggestion that they should imitate the republican institutions of Upper Italy met the necessities of the time that had created the revolution. He urged the reconstitution of the ancient senate and senatorial order, which indeed was already partially accomplished, and of the ancient equestrian order, and the reconstruction and fortification of the Capitol. His proposed senate was a body somewhat resembling the communal councils of Upper Italy, his equestrian order a mounted force composed of the lesser nobility, since at Rome, as elsewhere, the lower classes had neither time nor means to form part of it. All his suggestions were accepted; the citizens laboured strenuously on the fortification of the Capitol. The pope soon beheld the revolution spread beyond the walls, and several cities of the state proclaimed their independence. The barons of the Campagna profited by the opportunity to act as independent sovereigns. Thus the whole domain of the church was threatened with dissolution. The pope marched towards Rome with his newly gathered army, but hoped to come to terms. The Romans in fact recognized his authority, and he in his turn recognized the republic. The office of patrician was abolished, and seems to have been replaced by that of gonfalonier, and the prefect, answering to the podestà of the other republics, was revived. The senators received investiture from the pope, who returned to Rome at Christmas 1145.

The republic now seems to have been fully constituted. The senate was drawn from the lower classes and the petty nobility, and this was the special characteristic of the new revolution. In 1144 there were fifty-six senators, probably four to each of the fourteen regions, but the number often varied. By the few existing documents of the period we notice that the senators were divided into *senatores consilarii* and ordinary senators. The former constituted a smaller council, which, like the *credenza* or lesser council found in other cities, consulted with the head or heads of the republic on the more urgent and secret affairs of the state. And, conjointly with the rest of the senators, it formed the greater council. Thus classic traditions were identified with new republican usages, and the commonwealth of Rome resembled those in other parts of Italy. But, of course, every republic had special local customs of its own. So the Roman senate had judicial as well as political attributes, and there was a *curia senatus* composed of senators and legal experts.

As was easily to be foreseen, the agreement with the pope was of short duration. The revolution could not be checked; the Romans desired independence, and their spiritual lord fled to France, whence, in 1147, he proclaimed a new crusade, while the Romans were employed in demolishing Tivoli, banishing its inhabitants, and waging war on other cities. Giordano Pierleone was gonfalonier and head of the republic, and Arnold, sup-

ported by the popular favour and the enthusiasm of the lower clergy, was preaching with even greater fervour than before. But the pope now re-entered Italy, proclaimed Arnold a schismatic, and then advancing to Tusculum assembled an army in order to attack Rome. In this emergency the Romans applied to Conrad III., the first emperor of the house of Hohenstaufen; and their urgent letters are clearly expressive of Arnold's theories and his medley of ancient and modern, sacred and profane, ideas. "Rome," so they said, "is the fountain of the empire confided to you by the Almighty, and we seek to restore to Rome the power possessed by her under Constantine and Justinian. For this end we conquered and destroyed the strongholds of the barons who, together with the pope and the Normans, sought to resist us. These are now attacking us on all sides. Haste to Rome, the capital of the world, thus to establish thy imperial sway over the Italian and German lands."

After long hesitation the king of the Romans at last replied to these appeals, stating that he would come "to re-establish order, reward the faithful, and punish the rebellious." These words promised ill. In fact Conrad had already arranged terms with the pope; but his life came to an end on the 15th February 1152.

He was succeeded by Frederick I. surnamed Barbarossa, Frederick who took no notice of the numerous letters urging him to come and receive the empire from the Roman people, which alone had the right of conferring it. In accordance with his design of subduing all the independent cities, he made an agreement with the pope, in which he vowed to give no truce to the Romans, but subject them to their spiritual lord, whose temporal power should be restored. The pope, on his side, promised to crown him emperor. Thereupon the people again rose to arms, and Arnold broke off all negotiations with Eugenius III. The senate was reorganized, formed of one hundred members, and, according to the old Roman precedent, had two consuls, one for internal and the other for external affairs. Frederick was a daring statesman, a valiant soldier in command of a powerful army, and was no friend of half measures. Accordingly the nobles ventured on reaction. Finally, to increase the gravity of the situation, an English pope, Hadrian IV., was elected (1154-59), who was also a man of strong and resolute temper. In fact, even before being able to take possession of the Lateran, he requested the Romans to banish Arnold, who, with greater eloquence than ever, was directing his thunders against the papacy. These utterances increased the wrath of Hadrian, who, encouraged by the knowledge that Frederick and his host were already in Italy, at last launched an interdict against Rome. It was the first time that a pope had ventured to curse the Eternal City. The interdict put a summary stop to the religious life of the inhabitants. Men's minds were seized with a sudden terror, and a fierce tumult broke out. Thereupon the senators, whose opposition to the pope was less courageous than that of the fallen magnates, prostrated themselves at his feet and implored pardon. But Hadrian demanded the expulsion of Arnold before consenting to raise the interdict. Arnold was therefore obliged to leave Rome. After having for nine years preached successfully in favour of liberty, after having been the moving spirit of the new revolution, the new constitution, he was now abandoned by all, and forced to wander from castle to castle, in the hope of reaching some independent city capable of shielding him from the fierce enmity of the pope. Meanwhile Frederick I. had achieved his first victories in Lombardy, and, leaving ruined cities and bloodshed in his track, was rapidly advancing towards central Italy. The pope sent three cardinals to him, with a request for the capture and consignment of Arnold, who

Arnold's
execution.

had taken refuge in the castle or the Visconti of Campagnatico. Frederick without delay caused one of the Visconti to be seized and kept prisoner until Arnold was given up, and then consigned the latter to the papal legates. The pope in his turn gave the reformer into the hands of the prefect, Pietro di Vico, who immediately hanged his prisoner, burnt his body at the stake, and cast his ashes into the Tiber. The execution took place in June 1155. The exact date and place of it are unknown; we only know that Arnold met his fate with great serenity and firmness.

The re-
public
still re-
mains.

But the Romans who had so basely deserted their champion would not give up their republic. Their envoys went to meet Frederick near Sutri, and made an address in the usual fantastic style on the privileges of the Roman people and its sole right to confer the imperial crown. But Frederick indignantly cut short their harangue, and they had to depart full of rage. He then continued his march, and, entering Rome on the 18th June 1155, was forthwith crowned in St Peter's by the pope. Thereupon the Romans rushed to arms, and made a furious attack on the Leonine city and the imperial camp. A desperate battle went on throughout the day; and the knights proved that the equestrian order instituted at Arnold's suggestion was no empty sham. About a thousand Romans perished by the sword or by drowning, but their fellow-citizens made such determined preparations to continue the struggle that Frederick, on the 19th June, hastily retreated or rather fled, and was escorted as far as Tivoli by the pope and the cardinals. After all, the temporal power of the papacy was not restored, and the republic still survived in the form bestowed on it by Arnold of Brescia. Its existence was in truth favourable rather than injurious to Frederick, whose aim was to rule over Rome and treat the bishops as his vassals. He had not yet discerned that his best policy would have been to use the republic as a lever against the pope. The latter, with keener acumen, while remaining faithful to the feudal party in Rome, made alliance with the communes of Lombardy and encouraged them in their resistance to the emperor. Hadrian IV. died in 1159, and the national party elected Alexander III. (1159-1181), who energetically opposed the pretensions of Frederick, but, having to struggle with three antipopes successively raised against him by the imperial party, was repeatedly driven into exile. During these schisms the senate quietly carried on the government, administered justice, and made war on some neighbouring cities and barons. An army comprising many nobles of the national party marched against Tusculum, but found it defended by several valiant officers and a strong band of German soldiery, who, on the 29th May 1167, inflicted on the Romans so severe a defeat that it is styled by Gregorovius the Cannæ of the Middle Ages. Shortly afterwards the emperor arrived in Rome with his antipope Paschal III., and Alexander had to fly before him to Benevento. Then, at last, Frederick came to terms with the republic, recognized the senate, which accepted investiture at his hands, re-established the prefecture as an imperial office, and bestowed it on Giovanni, son of Pietro di Vico. He then hastily departed, without having advanced outside the Leonine city.

Meanwhile Pope Alexander continued the crafty policy of Hadrian and with better success, for the Lombard cities had now formed a league and inflicted a signal defeat on the emperor at Legnano on the 29th May 1176. One of the results of this battle was the conclusion of an agreement between the pope and the emperor, the latter resigning his pretensions on Rome and yielding all that he had denied to Hadrian. And by the treaty of Venice (1st August 1177) the antipope was forsaken, Alexander

III. recognized and hailed as the legitimate pontiff, and Agre- the prefect of Rome again nominated by the pope, to whom the emperor restored the temporal power, acknowledging him the independent sovereign of Rome and of the ecclesiastical state, from Acquapendente to Ceprano. Frederick's troops accompanied the pope to Rome, where the republic was forced to make submission to him. But, proudly conscious as it still was of its strength, its surrender wore the aspect of a voluntary concession, and its terms began with these words—"Totius populi Romani consilio et deliberatione statutum est," &c. The senators, elected yearly in September, had to swear fealty to the pope, and a certain proportion of nobles was included in their number. On his return to Rome, Alexander received a solemn welcome from all, but he had neither extinguished nor really subdued the republic. On the contrary, men's minds were more and more inflamed by the example of freedom displayed in the north of Italy. He died on the 30th August 1181. The fact that between 1181 and 1187 there were three popes always living in exile proves that the republic was by no means crushed. During the same period another blow was inflicted on the papacy by the marriage of Henry VI., son and successor to Frederick I., with Constance, sole heiress of the Norman line in Naples. For thus the kingdom was joined to the empire and the popes were more than ever in the latter's power. On the 20th December 1187 Clement III. (1187-91), being raised to the pontificate, made a solemn agreement with the Government of the Capitol before coming to Rome. And this peace or *concordia* had the air of a treaty between potentates of equal importance. Rome confronted the pope from the same standpoint from which the Lombard cities had confronted the emperor after Legnano. This treaty, the basis of the new constitution, was confirmed on the last day of May 1188 (Anno XLIV. of the senate). It begins with these words:—"Concordia inter Dominum Papam Clementem III. et senatores populumque Romanum super regalibus et aliis dignitatibus urbis." The pope was recognized as supreme lord, and invested the senators with their dignity. He resumed the privilege of coinage, but allowed one-third of the issue to be made by the senate. Almost all the old pontifical rights and prerogatives were restored to him. The pope might employ the Roman militia for the defence of his patrimony, but was to furnish its pay. The rights of the church over Tivoli and Tusculum were confirmed; but the republic reserved to itself the right of making war on those cities, and declared its resolve to dismantle and destroy the walls and castle of Tusculum. In this undertaking the pope was to co-operate with the Romans, even should the unhappy city make surrender to him alone.

From all this it is clear that the church had been made independent of the empire, and that the republic, despite its numerous concessions, was by no means subject to the church. The pope, in fact, had obtained liberty of election, and Frederick I., by resigning the investiture of the prefect, had virtually renounced his claim to imperial power in Rome. The republic had no patrician nor any other imperial magistrate, and preserved its independence even as regarded the pope, who merely granted investiture to magistrates freely chosen by the people, and had no legislative nor administrative power in the city. His temporal dominion was limited to his great possessions, to his regalia, to a supreme authority that was very indefinite, and to a feudal authority over the barons of the Campagna and many cities of a state that seemed ever on the point of dissolution. The senate continued to frame laws, to govern, and to administer justice. The army carried on the wars of the republic, as we see by the tragic fate of Tusculum, which was razed to the ground on the 19th

independent of
the empire.

The nobles re-enter the senate.

Popular revolution and counter-revolution of the aristocracy.

The office of prefect becomes hereditary.

Innocent III. elects the senate.

April 1191. Thus the powerful counts of Tusculum disappeared; they sought refuge in the Campagna, and according to all probability the no less potent family of the Colonna sprang from their line. In consequence of these events, the nobles realized that the papacy sought to reduce them to vassalage. And, seeing that the republic remained firmly established and able to help them, they began to adhere to it and succeeded in obtaining admission to the new senate. In fact, whereas since 1143 plebeians and petty nobles had prevailed in its ranks, nobles of ancient descent are now found outnumbering the knights and burghers. But in 1191 this state of things caused a sudden popular outbreak which abolished the aristocratic senate and gave the headship of the republic to a single senator, *summus senator*, named Benedetto "Carissimus" or "Carus Homo" or "Carosomo," of unknown, but undoubtedly plebeian, origin. During the two years he remained in office this personage stripped the pope of his revenues, despatched *justitiani* even to the provinces, and with the aid of the parliament and other popular assemblies promulgated laws and statutes. But he was overthrown by a counter-revolution, and Giovanni Capoccio of the party of the nobles became senator for two years, and had been succeeded by one of the Pierleoni when, in 1197, a fresh revolution re-established a senate of fifty-six members, chiefly consisting of feudal barons in high favour with Henry VI., who had revived the imperial faction in Rome. But this emperor's life ended the same year as the pope's, in 1198, and the new pontiff Innocent III. (1198-1216) began to make war on the nobles, who were again masters of the republic. Their leader was the prefect Pietro di Vico. Owing to the revolution of 1143 most of the prefectorial attributes were now vested in the senate; nevertheless Pietro still retained a tribunal of police both within and without the city. But his main strength was derived from the vast possessions of the Vico family, in which the office of prefect now became hereditary. Very soon, however, these prefects of Vico were chiefly regarded as the great feudal lords of Tuscia, and the independent municipal office lost its true character. Then the popes made a point of according great pomp and dignity to this nominal prefect, in order to overshadow the senator, who still represented the independence of the republic and had assumed many of the attributes wrested from the prefect.

But Innocent III., dissatisfied with this state of things, contrived by bribing the people to arrogate to himself the right of electing the senator, who had now to swear fealty and submission to the pope, and also that of nominating the provincial *justitiani*, formerly chosen by the Government of the Capitol. This was a deadly blow to the republic, for the principal rights of the people, i.e., the election of pope and emperor, prefect and senate, were now lost. The general discontent provoked fresh revolutions, and Innocent III. employed all his political dexterity to ward off their effects. But shortly afterwards the people made a loud outcry for a senate of fifty-six members; and the pope, again making a virtue of necessity, caused that number to be chosen by twelve *mediani* specially named by him for the purpose. Even this did not calm the popular discontent, which was also stirred by other disputes. The consequence was that when, six months later, the pope again elected a single senator the Romans rose to arms, and in 1204 formed a Government of *Buoni Uomini* in opposition to that created by the pope. But an amicable arrangement being concluded, the pope once more nominated fifty-six senators; and when, soon after, he again reduced them to one, the people were too weary to resist (1205). Thus the Capitol was subdued, and Innocent III. spent his last years in tranquillity.

On the 22d November 1220 Honorius III. (1216-27) conferred the imperial crown on Frederick II., who confirmed to the church the possession of her former states, of those bequeathed to her by countess Matilda, and even of the March of Ancona. But it was soon seen that he sought to dominate all Italy, and was therefore a foe to be dreaded. The successor of Honorius, Pope Gregory IX. (1227-41) was speedily insulted and put to flight by the Ghibelline nobles, whose courage had revived, and the republic began to subdue the Latian cities on its own account. Peace was several times made and unmade by pope and people; but no enduring harmony was possible between them, since the former wished to subject the entire state to the church, and the latter to escape from the rule of the church and hold sway over "the universal land from Ceprano to Radicofani" formerly belonging to the duchy. Accordingly the Roman people now appointed judges, imposed taxes, issued coin, and made the clergy amenable to secular tribunals. In 1234 the senator Luca Savelli published an edict declaring Tuscia and Campania territories of the republic, and sent judges thither to exact an oath of obedience. He also despatched the militia to the coast, where it occupied several cities and erected fortresses; and columns were raised everywhere inscribed with the initials S. P. Q. R. The pope, unable to prevent but equally unable to tolerate these acts, fled from Rome, hurling his anathema against Savelli, "et omnes illos consiliarios urbis quorum consilio," &c. The Romans sacked the Lateran and the houses of many cardinals, and marched on Viterbo, but were driven back by the papal troops. When Savelli left office and Angelo Malabranca was elected in his stead, the people made peace and submission in 1235, and were obliged to give up their pretensions of subjecting the clergy to ordinary tribunals and the urban territory to the republic. Thus matters were virtually settled on the footing established by Innocent III., thanks to the aid given to the pope by Frederick II., who had been one of the promoters of the rebellion.

It may appear strange that, at this period of their history, the Romans, after showing such tenacious adherence to the republic and senate, should have accepted the rule of a single senator without rushing to arms, and passed and repassed from one form of government to another with such surprising indifference. But on closer examination it is plain that these changes were greater in appearance than reality. We have already seen, in treating of Carosomo, how the single senator convoked the people in parliament to pass sanction on the laws. But, whenever there is only one senator, we also continually meet with the expression "*consilium vel consilia urbis*." It is evident that when, instead of laws to be approved in parliament by a simple placet or rejected by a non-placet, matters requiring consideration had to be discussed, the senator convoked a much smaller council, consisting only of the leaders of the people. These leaders were the heads of the twelve or thirteen regions, of the guilds, now becoming organized and soon to be also thirteen in number, and of the militia. As in the other Italian republics, all these associations had been formed in Rome.

The senator therefore held consultation with the leading men of the city; and, although, especially at first, these meetings were rather loosely organized, it is clear that they took the form of two councils—one numerous (*consiglio maggiore*), the other limited (*consiglio minore* or *speciale*), co-operating with and forming part of the first. Such was the prevailing custom throughout Italy at the time when Roman institutions most nearly resembled those of the other republics. We already know that, from the date of Arnold's reforms, the senate, with its junta of counsellors, had been divided into two parts, forming when

The republic regains independence.

The republic submits to the people.

Formation of the greater and lesser councils.

united a species of greater council. Therefore the transition from a senate divided into two parts to the greater and lesser councils must have been very easy and natural. And, seeing that later, when the nomination of a single senator had become a constant practice, the meetings of the two councils are frequently mentioned without the slightest remark or hint as to their origin, it is clear that they had been gradually formed and long established. Not long after the revolution of 1143 the grandees sought to re-enter the senate; and the popes themselves, partly from dread of the people and partly to aggrandize their own kindred, contributed to build up the power of a new and no less turbulent nobility. This class, arising between the 12th and 13th centuries, was composed of families newly created by the popes, together with remnants of the old aristocracy, such as the Frangipani, Colonna, &c. These nobles, regaining possession of the senate, so completely eliminated the popular element that, when the popes again opposed them, and, obtaining from the parliament the right of electing the senators, adopted the expedient of appointing one only, the senator was always chosen from the ranks of the nobles. And then the people, unable and unwilling to renounce republican forms, replaced their suppressed senate by a greater and a lesser council. This was an easy task—a natural consequence of the fact that the people now began to constitute the real strength of the republic. Later, with an increasing detestation for their nobility, the Romans decreed that the single senator should be of foreign birth, and, as we shall see, chose Brancalone in the middle of the 13th century.

The
Roman
statutes.

Thus, after a long series of frequent changes and revolutions, the Roman republic became a commonwealth, with an increasing resemblance to those of the other Italian cities. The people were organized and armed, the guilds almost established, the two councils gradually constituted, and the aristocracy, while retaining special local characteristics, assumed its definitive shape. It is not surprising to find that Rome, like other Italian cities, now possessed statutes of its own. There has been much controversy on this point. Certain writers had alluded to a statute of 1246. As no one, however, could discover any statute of that date, others decided that it had never existed. A statute of 1363 was recently published by Professor Camillo Re, who asserted it to be the first and most ancient that Rome had possessed. But the still more recent researches of Messrs La Mantia and Levi prove that Professor Re's assertions were somewhat too bold. There is certain evidence of a *statutum senatus* existing between 1212 and 1227, of a *statutum vel capitulare senatoris vel senatus* of 1235, followed in 1241 by a *statutum urbis*. This brings us very near to the statute of 1246 mentioned by Vitale and others. So it is well ascertained that, in the first half of the 13th century, Rome possessed statutes at large composed of older limited statutes. The consuls of the trade guilds were from 1267 regular members of the councils; and the merchants' guild held general meetings in 1255. Its statutes were confirmed in 1296 by the senator Pandolfo Savelli, and the compilation of these, published in 1880 by Signor Gatti, refers to 1317.

Frederick II.
and the
pope.

Meanwhile the struggle between Frederick II. and the pope was once more renewed. The former sought to dominate Italy, separate the state from the church, and repress the republics. The latter, although really hostile to the Roman free Government, joined it against the emperor, who on his side favoured the republic of Rome and the nobles most adverse to the pope. Thus the new nobility, composed, as we have seen, of two different elements, was again split into a Guelf party headed by the Orsini and a Ghibelline party under the Colonna. And in 1238 it was deemed advisable to elect two senators instead of one,

in the hope of conciliating both factions by simultaneously raising them to power. Afterwards one only was elected, alternately an Orsini and a Colonna, then again two, and so on. But all these changes failed in their aims, since the struggle between emperor and pope exasperated party feeling in Rome. The political genius of Frederick might have wrought great harm to the city had not his mind teemed with contradictory ideas. Although desirous to emancipate the state from the church, he was opposed to the communal democracy, which was then the chief strength of the secular state in Italy. While combating the church and persecuting her defenders, he yet sent heretics to the stake; although excommunicated, he undertook a crusade; he feasted at his table philosophers, sceptic and atheist poets, bishops, and Mussulmans; he proclaimed anti-Christian the possession of wealth by the church, yet made lavish gifts to altar and monastery. Thus, although he had a strong party in Rome, it seemed to dissolve at his approach, inasmuch as all feared that he might abolish the statutes and liberties of the commune. It fact, when he advanced towards Rome on the death of Gregory IX. in 1241 he was energetically repulsed by the people, and later even by Viterbo, a city that had always been faithful to him. But after he had withdrawn his adherents gained strength and put to flight his opponent, Innocent IV. (1243–54), the newly elected pope, who then from his asylum in France hurled an excommunication against him. Frederick's death in December 1250 determined the fall of the Ghibelline party and the close of the imperial epoch in Italy. The pope instantly returned to Rome with the set purpose of destroying the power of the Hohenstaufens. This was no longer difficult when, by the decease of Conrad IV. (1254), the child Conradin became the last legitimate representative of that line, and negotiations were already on foot for placing the Angevins on the Neapolitan throne.

The republic meanwhile preserved its independence against the pope, who, among other concessions, had entirely given up to it the right of coinage. Nevertheless, being much harassed by the factiousness of the nobility, it was obliged in 1252 to decide on the election of an alien senator armed with ample powers, precisely as other communes gave the government into the hands of a podestà. Accordingly a Bolognese noble, Brancalone degli Andalo, count of Casalecchio, and a Ghibelline of much energy and talent, was invited to Rome. But before accepting office he insisted on making definite terms. He desired to hold the government for three years; and this, although contrary to the statutes, was granted. Further, to ensure his personal safety, he demanded that many scions of the noblest Roman houses should be sent as hostages to Bologna; and to this also the republic consented. Then, in August 1252, he came with his judges and notaries, made oath to observe justice and the laws, and began to govern. He was head of the republic in peace and in war, supreme judge and captain in chief. He nominated the podestàs of subject territories, despatched ambassadors, issued coin, concluded treaties, and received oaths of obedience. The pope, who was then at Perugia, was greatly afflicted by the arrival of this new master, but, despairing of aid from any quarter, was forced to make a virtue of necessity. Thus Brancalone was able to seize the reins of power with a firm grasp. The parliament still met in the square of the Capitol, and the greater and lesser councils in the church of Ara Coeli. There were besides frequent assemblies of the college of Capitoline judges or *assectamentum*. Unfortunately, no records having been preserved of the proceedings of the Roman councils and parliament, little can be said of the manner in which affairs were conducted. Certainly Brancalone's govern-

Brancalone degli Andalo, the first foreign senator.

ment was not very parliamentary. He convoked the councils as seldom as was possible, although he frequently assembled the people in parliament. The chief complaint made against him was of undue severity in the administration of justice. He rendered the clergy amenable to secular tribunals, subdued the neighbouring cities of Tivoli, Palestrina, &c., and commanded in person the attacking force. But his greatest energy was directed to the repression of the more turbulent nobles who were opposed to him; and he soon made them feel the weight of his hand by hanging some, banishing others, and persecuting several more. But he too recognized the expediency of winning the popular favour. He was the first senator to add to his title that of captain of the people ("Almae Urbis Senator Ill: et Romani Populi Capitaneus"). He befriended the people by promoting the organization of guilds after the manner of those of his native Bologna. There were already a few in Rome, such as the merchants' guild and that of the agriculturists, *Bobacteriorum* or *Bovattari*, who must have resembled the so-called *mercanti di campagna* or graziers of the present day, since no peasant guild existed in Italian republics. The merchants' guild, definitely established in 1255 under Brancalone's rule, had four consuls and twelve councillors, held meetings, and made laws. The other guilds, thirteen in all, were organized much on the same plan. The admission of their heads into the councils of the republic in 1267 shows how efficaciously their interests had been promoted by Brancalone.

The death of Innocent IV. and the election of Alexander IV. (1254-61), who was milder and less shrewd than his predecessor, were favourable events for Brancalone; but he failed to check the growing discontent of the clergy and the more powerful nobles, who had received deadly injuries at his hands. And when, on the expiration of his three years' term of office, his re-election was proposed, his enemies rose against him, accused him before the *sindacato*, threw him into prison, and vehemently protested against the continuance of "foreign tyranny." His life was only spared on account of the hostages sent to Bologna. The next senator chosen was a Brescian Guelf, Emanuele de Madio, a tool of the nobles, who were now masters of the situation. But soon afterwards, in 1257, the guilds rose in revolt, drove the nobles from power, put the pope to flight, and recalled Brancalone for another three years' term. He ruled more sternly than before, hung several nobles, and made alliance with Manfred, the representative of the Swabian party in Italy. This rendered him increasingly odious to the pope and procured his excommunication. But, disregarding the thunders of the church, he marched against Anagni, the pope's birthplace, and Alexander was quickly obliged to humiliate himself before the senator of Rome. Brancalone next set to work to destroy the fortified towers of the nobility, and in razing them to the ground ruined many of the adjacent dwellings. Accordingly, a considerable number of nobles became homeless exiles. In 1258, while engaged on the siege of Corneto, Brancalone was attacked by a violent fever, and, being carried back to Rome, died on the Capitoline Hill. Thus ended the career of a truly remarkable statesman. He was succeeded by his uncle, Castellano degli Andalò, who, lacking the political genius of his nephew, only retained office until the following spring (1259), in the midst of fierce and perpetual disturbances. Then the people, being bribed by the pope, joined with the nobles and drove him away. His life too was saved by having followed his nephew's shrewd plan of sending hostages to Bologna. Two senators of Roman birth were next elected; and on the death of Alexander IV. a French pope was chosen, Urban IV. (1261-64), thus giving fresh predominance in the church to the anti-Swabian policy. But the

internal disturbances of the city soon drove Urban to flight.

At this period the fall of the empire had induced many Italian republics to seek strength by placing their governments in the hands of some prince willing to swear respect to their laws and to undertake their defence against neighbouring states and the pope. In Rome the Guelfs and Ghibellines proposed various candidates for this office, and after many fierce quarrels ended by electing a committee of *boni homines*, charged with the revision of the statutes, reorganization of the city, and choice of a senator. This committee sat for more than a year without nominating any one, so, the Guelf party being now predominant, and all being wearied of this provisional state of things, the majority agreed on the election as senator of Charles of Anjou, who, at the pope's summons, was already preparing for the conquest of Naples. He would defend Rome against the pope, and the pope would defend Rome against him. By thus taking advantage of either's jealousy the citizens hoped to keep their republic intact. In fact, although Urban IV. had incited Charles to attack Naples, he was by no means willing to see him established as master in Rome. He accordingly declared that, if Charles really wished to obtain the Neapolitan crown, he must only accept the offered dignity pending the conquest of that kingdom. And he must likewise promise to recognize the supremacy of the pope over the senate. Charles soothed him with the amplest verbal promises, but in fact accepted the senatorship for life. In 1265, when Urban was succeeded by Clement IV. (1265-68), who as a Provençal was a subject of Charles, the latter entered Rome and was immediately made senator. Seven days later (28th June) he received the investiture of the Neapolitan kingdom, and in the following January its crown. On the 26th February 1266 the battle of Benevento was fought, and, the valiant Manfred being killed, the triumph of the Guelf Angevins in Italy was assured. Then, at the urgent command of the pope, Charles was forced to resign the senatorship in the May of the same year. Two Romans were elected in his stead, but soon fell out with the pope, because the Guelf nobles again tried to exercise tyranny. The people, however, profited by these disturbances to rise on its own account, and formed a democratic government of twenty-six *boni homines* with Angelo Capocci, a Ghibelline, as its captain. By this government Don Henry, son of Ferdinand III. of Castile, was elected senator; and he came to Rome for the purpose of promoting a Ghibelline and Swabian policy in favour of Conradin, who was preparing for conflict. The rule of the new senator was very energetic, for he kept down the clergy, subdued the Campagna, persecuted the Guelf nobles, made alliance with the Tuscan Ghibellines, forcibly drove back the troops of King Charles, who was advancing towards Rome, and gave a splendid reception to Conradin. But the battle of Tagliacozzo (23rd August 1268), followed by the murder of Conradin, proved fatal to the Ghibelline party. Charles was re-elected senator immediately after the battle, and the pope confirmed his powers for a term of ten years, after having already named him imperial vicar in Tuscany. On the 16th September Charles for the second time took possession of the Capitol, and ruled Rome firmly by means of vice-governors or vicars.

The Swabian line was now extinct, and in Charles's hands the Neapolitan kingdom had become a fief of the church. The empire had fallen so low as to be no longer formidable. Now therefore was the moment for treating with it in order to restrain Charles, and also for making use of the French king to keep the empire in check. And this was the policy of Nicholas III. (1277-80), who hastened to extract advantageous promises from Rudolph

Charles of Anjou senator.

The senate in the hands of the popes.

of Hapsburg, the new candidate for the imperial crown. In 1278, the ten years' term having expired, he deprived Charles of the senatorship and appointed Rudolph vicar of Tuscany. After declaring that he left to the people the right of electing the senator, he promulgated a new constitution (18th July 1278) which, while confirming the rights of the church over the city, prohibited the election of any foreign emperor, prince, marquis, count, or baron as senator of Rome. Thus the Colonna, Savelli, Orsini, Annibaldi, and other Roman nobles again rose to power, and the republic was again endangered and plunged in disorder. The Romans then gave the reconstitution of the city into the pope's hands by yielding to him the right of nominating senators, declaring, however, that this was a personal concession to himself, and not to the popes in general. So Nicholas proceeded to name senators, alternating a Colonna with an Orsini, or simultaneously choosing one of each faction. The same power over the senate was granted with the same restriction to Martin IV. (1281-85), and he at once re-elected Charles of Anjou. Thus, greatly to the disgust of the Romans, the Capitol was again invaded by French vicars, notaries, judges, and soldiery. But the terrible blow dealt at Charles's power by the Sicilian Vespers (31st March 1282) resounded even in Rome. The Orsini, backed by the people, rose to arms, massacred the French garrison, and quickly re-established a popular Government. Giovanni Cencio, a kinsman of the Orsini, was elected captain and defender of the people, and ruled the city with the co-operation of the senator and a council of priors of the guilds. This Government was of brief duration, for, although the pope had professed his willingness to tolerate the experiment, he quickly arranged fresh terms, and, forsaking Charles of Anjou, again nominated two Roman senators. Pope and king both died in 1285, and Nicholas IV. (1288-92), also holding sway over the senate, favoured the Colonna in order to curb the growing mastery of the Orsini. But thus there were two powerful houses instead of one. In fact Giovanni Colonna, when elected senator, ruled from the Capitol as an independent sovereign, conducted in person the campaign against Viterbo, and subjected that city to the republic on the 3d May 1291.

Boniface VIII.

When one of the Gaetani, Boniface VIII. (1294-1303), was raised to the papal chair, the extent of the Colonnas' power became evident to all. Boniface opposed them in order to aggrandize his own kin, and they showed equal virulence in return. The Cardinals Colonna refused to acknowledge him as the legitimate pope, and he excommunicated them and proclaimed a crusade against their house. Even after he had subdued them and destroyed Palestrina, their principal fief, the drama did not yet come to an end. Boniface had a very lofty conception of the church, and desired to establish her supremacy over the state. The king of France (Philip the Fair) believed, on the contrary, that the Angevin successes entitled him to fill the place in Italy vacated by the Swabians, and to play the master there. This led to a tremendous contest in which all the French sided with their king. And shortly afterwards a plot was hatched against the pope by the agents of France and the Colonna. These determined enemies of the pope met with much favour in Rome, on account of the general irritation against the Gaetani and the enormous power conferred on them by Boniface. Suffice it to say that they were now lords of the whole of lower Latium, from Capo Circeo to Ninfa, from Ceprano to Subiaco. Thus Sciarra Colonna and a Frenchman named Nogaret were able to fall on the pope at Anagni, insult him, and take him prisoner. The people rising to his rescue, the conspirators were put to flight. But when Boniface returned to Rome with the escort and protection of the

Orsini, who had made themselves masters of the city, he found that he was virtually a captive in their hands. He felt this so keenly that he died of rage and exhaustion on the 11th October 1303. The brief pontificate of his successor Benedict XI. was followed by that of Clement V. (1305-14), a Frenchman, who, instead of coming to Rome, summoned the cardinals to France. This was the beginning of the church's so-called exile in Avignon, which, although depriving Rome of a source of wealth and influence, left the republic to pursue its own course. It employed this freedom in trying to hold its own against the nobles, whose power was much lessened by the absence of the pope, and endeavoured to gain fresh strength by organizing the thirteen regions, which, as we have shown, were associations of a much firmer nature in Rome than the guilds. Accordingly, in 1305, a captain of the people was elected with thirteen elders and a senator, Paganino della Torre, who governed for one year. The pope was opposed to these changes at first, but in 1310 he issued a brief granting Rome full permission to select its own form of government. Thus, the first pope in Avignon restored the rights of the Romans. But the latter, even with church and empire so far removed, still considered Rome the Eternal City, the source of all law, and the only natural seat of the spiritual and temporal government of the world. To their republic, they thought, appertained a new and lofty destiny, nor could it ever be content to descend to the level of other Italian municipalities.

On the 6th January 1309 Henry VII. was crowned king of the Romans at Aix-la-Chapelle; and so greatly were men's minds changed in Italy that, throughout the land, he was hailed as a deliverer. He wished to restore the grandeur of the empire, and the Italians, above all Dante Alighieri, beheld in him the champion of the state against the church, who, after becoming the foe of communal liberty, had forsaken Italy and withdrawn to France. The Roman people shared these ideas, and awaited Henry with equal impatience, but the nobles rose in opposition. The Orsini, leaders of the Guelfs, and allied with Robert of Naples, took possession of Castle St Angelo and the Trastevere. Hence, when Henry reached Rome in May 1312, after seizing the iron crown at Milan, he was obliged to act on the offensive. He took the Capitol by assault, but, failing in his attack on Castle St Angelo, was pursued by its Neapolitan garrison. Forsaken by many discouraged adherents, he was forced to recognize the expediency of departure. First, however, he desired to be crowned at the Lateran, St Peter's being held by his foes. The cardinals refused his request, but were compelled to yield by the threats of the people, who, reasserting their ancient rights, insisted that the coronation should take place without delay. And the ceremony was performed on the 29th June 1312. The emperor then resolved to depart in spite of the popular protest against his leaving the natural seat of the empire, and on the 20th August started for Tuscany, where worse fortune awaited him.

Their differences settled, the nobles expelled the captain of the people left by Henry, and elected as senators Sciarra Colonna and Francesco Orsini. But this was the signal for a popular revolt. The Capitol was attacked, the senators put to flight, and Jacopo Arlotti elected captain with a council of twenty-six worthies (*buoni homini*). The new leader instantly summoned the chief nobles before his tribunal, had them chained and cast into prison, and demolished many of their houses and strongholds. But, having thus humiliated their pride, Arlotti dared not put them to death, and, releasing them from confinement, banished them to their estates, where they plunged into hostile preparations. Meanwhile the victorious people convoked a parliament and decreed that, the aristocracy

The republic again takes a democratic form.

Henry VII.

Jacopo Arlotti captain of the people.

being now overthrown, the *tribunitia potestas* alone should invite the emperor to make his triumphal entry into the Capitol, and receive his authority from the people of Rome. This conception of the Roman power will now be seen to become more and more definite until finding its last expression in Cola di Rienzo. Pope Clement, resigning himself to necessity, acknowledged the new government under the energetic rule of Arlotti. The latter now joined the Ghibellines of the Campagna against the Orsini and the Neapolitans, subdued Velletri, and gave it a *podestà*. But then the Gaetani, who were Guelfs, united with the Orsini and the Neapolitans, and, giving battle to the Ghibellines in the Campagna, routed them in such wise as to put an end to the popular government. The nobles forced their way into the city, attacked the Capitol, made Arlotti their prisoner, and re-elected the senators Sciarra Colonna and Francesco Orsini. Close upon these reverses came the death of Henry VII. (24th August 1313) at Buonconvento near Siena, which put an end to the Ghibelline party in Italy. Thereupon King Robert of Naples, being named senator by the pope, immediately appointed a vicar in Rome. Clement likewise profited by the vacancy of the imperial throne to name the king imperial vicar in Tuscany. And he died on the 20th April 1314, well content to have witnessed the triumphs of the Guelfs in Italy.

Affairs took a fresh turn under Pope John XXII. (1316-34). Rome was still ruled by the vicars of King Robert; but, owing to the continued absence of the popes, matters grew daily worse. Trade and industry declined, revenue diminished, the impoverished nobles were exceedingly turbulent, deeds of murder and violence occurred on all sides; even by day the streets of the city were unsafe. Hence there was universal discontent. Meanwhile Louis the Bavarian, who in 1314 had been crowned king of the Romans, having overcome his German enemies at Mühldorf in 1322, turned against the pope, one of his fiercest opponents. Louis was surrounded by Minorite friars, supporters of the poverty of the church, and consequently enemies to the temporal power. They were men of the stamp of William of Occam, Marsilio of Padua, Giovanni Janduno, and other philosophers favourable to the rights of the empire and the people. Accordingly the Italian Ghibellines hailed Louis as they had previously hailed Henry. Even the Roman people were roused to action, and, driving out the representatives and partisans of King Robert, in the spring of 1327, seized on Castle St Angelo, and again established a democratic government. "Nearly all Italy was stirred to new deeds," says G. Villani, "and the Romans rose to arms and organized the people" (bk. x. c. 20). Regardless of the reproofs of the pope, they elected a haughty Ghibelline, Sciarra Colonna, captain of the people and general of the militia, with a council of fifty-two *popolani*, four to each region. Then, ranged under the standards of the militia, the Romans gave chase to the foes of the republic, and Sciarra, returning victorious, ascended to the Capitol and invited Louis the Bavarian to Rome. The summons was obeyed; on the 7th January 1328 the king was already encamped in the Neronian Fields with five thousand horse and a considerable number of foot soldiers, and, with better fortune than Henry VII., was able to enter the Vatican at once.

Encircled by a crowd of heretics, reformers, and Minorite brethren, he convoked a parliament on the Capitol, asking that the imperial crown might be conferred upon him by the people, from whom alone he wished to receive it. And the people proclaimed him their captain, senator, and emperor. On the 17th January his coronation took place in St Peter's. But, as he had neither money nor practical sense, his method of taxation and the excesses

committed by himself and his over-excited philosophers speedily aroused the popular discontent. His ecclesiastical vicar, Marsilio of Padua, and Giovanni Janduno placarded the walls with insulting manifestoes against the pope, whom the Minorites stigmatized as a heretic and wished to depose. In April Louis twice assembled the parliament in St Peter's Square, and, after obtaining its sanction to several anti-papal edicts, declared John XXII. degraded and deposed as a heretic. This was a very strange and novel spectacle, the more so that, as was speedily proved, the Romans were stirred by no anti-Catholic spirit, no yearning for religious reform. Jacopo Colonna, a canon of the Lateran, was able to make his way into Rome with four masked companions, to publicly read, at the top of his voice and before a great multitude, the excommunication launched against the emperor by the deposed pope, to traverse the entire city, and to withdraw unmolested to Palestrina. Meanwhile the emperor contented himself with decreeing that henceforth the popes must reside in Rome,—that if, when invited, they should fail to come they would be thereby held deposed from the throne. As a logical consequence, proceedings were immediately begun for the election of the new pope, Nicholas V., who on the 12th May was proclaimed by the popular voice in St Peter's Square, and received the imperial sanction. But this ephemeral drama came to an end when the emperor departed with his antipope on the 4th August. This caused the immediate downfall of the democratic Government. Bertoldo Orsini, who had returned to Rome with his Guelfs, and Stefano Colonna were elected senators, and confirmed in the office by Cardinal Giovanni Orsini in the name of the pope. A new parliament cancelled the emperor's edicts, and had them burnt by the public executioner. Later, Nicholas, the antipope, went with a rope about his neck to make submission to John XXII., and Louis promised to disavow and retract all that he had done against the church, provided the sentence of excommunication were withdrawn. This, however, was refused. Never had the empire fallen so low. Meanwhile King Robert was again supreme in Rome, and, being re-elected senator, appointed vicars there as before. Anarchy reigned. The city was torn by factions, and the provinces rebelled against the French representatives of the pope, who, in their ignorance of Italian affairs, were at a loss how to act.

And after the election of Benedict XII. (1334-42) confusion reached so great a pitch that, on the expiration of Robert's senatorial term, the Romans named thirteen heads of regions to carry on the government with two senators, while the king still sent vicars as before. The people, for the sake of peace, once more granted the supremacy of the senate to the pope, and he nominated two knights of Gubbio, Giacomo di Cante dei Gabrielli and Bosone Novello dei Gabrielli, who were succeeded by two other senators the following year. But in 1339 the Romans attacked the Capitol, named two senators of their own choice, re-established a democratic Government, and sent ambassadors to Florence to ask for the ordinances of justice (*ordinamenti della giustizia*), by which that city had broken the power of the nobles, and also that a few skilled citizens should lend their help in the reconstitution of Rome. Accordingly some Florentines came with the *ordinamenti*, some portions of which may be recognized in the Roman statutes, and, after first rearranging the taxes, elected thirteen priors of the guilds, a gonfalonier of justice, and a captain of the people after the Florentine manner. But there was a dissimilarity in the conditions of the two cities. The guilds having little influence in Rome, the projected reform failed, and the pope, who was opposed to it, re-elected the senators.

Louis the Bavarian.

Reconstitution of the republic.

Thereupon public discontent swelled, and especially when, by the foundation of the papal palace of Avignon, it was evident that Benedict XII. had no intention of restoring the Holy See to Italy. This pope was succeeded in 1342 by Clement VI. (1342-52), and King Robert in 1343 by his niece Joanna; and the latter event, while plunging the kingdom in anarchy, likewise aggravated the condition of Rome. For not only were the Neapolitan sovereigns still very powerful there, but the principal Roman nobles held large fiefs across the Neapolitan borders.

Cola di Rienzo.

Shortly before this another revolution in Rome had re-established the government of the Thirteen and the two senators. The people, being anxious to show their intention of respecting the papal authority, had despatched to Avignon as ambassador of the republic, in 1343, a man destined to make much noise in the world. This was Cola di Rienzo, son of a Roman innkeeper, a notary, and an impassioned student of the Bible, the fathers, Livy, Seneca, Cicero, and Valerius Maximus. Thoroughly imbued with a half pagan half Christian spirit, he believed that he had a divinely inspired mission to revive the ancient glories of Rome. Of handsome presence, full of fantastic eloquence, and stirred to enthusiasm by contemplation of the ruined monuments of Rome, he harangued the people with a stilted oratory that enchanted their ears. He hated the nobles, because one of his brothers had been killed by them; he loved the republic, and in its name addressed a stately Latin speech to the astonished pope, and, offering him the supreme power, besought his instant return to Rome. He also begged him to allow the city to celebrate a jubilee every fifty years, and then, as a personal request, asked to be nominated notary to the urban chamber. The pope consented to everything, and Rienzi communicated this good news to Rome in an emphatically worded epistle. After Easter, in 1344, he returned to Rome, and found to his grief that the city was a prey to the nobles. He immediately began to admonish the latter, and then, draped in a toga adorned with symbols, exhibited and explained allegorical designs to the people, and announced the speedy restoration of the past grandeur of Rome. Finally he and a few burghers and merchants, whom he had secretly inflamed by his discourses, made a solemn vow to overthrow the nobility and consolidate the republic. The moment was favourable, owing to the anarchy of Naples, the absence of the pope, the weakness of the empire, and the disputes of the barons, although the latter were still very potent and constituted, as it were, a separate government opposed to that of the people. Rienzi, having gained the pope's ecclesiastical vicar to his side, passed in prayer the night of the 19th May 1347, placing his enterprise under the protection of the Holy Spirit, and the following day marched to the Capitol, surrounded by his adherents, convoked a parliament of the people, and obtained its sanction for the following proposals:—that all pending lawsuits should be at once decided; that justice should be equally administered to all; that every region should equip one hundred foot soldiers and twenty-five horse; that the dues and taxes should be rearranged; that the forts, bridges, and gates of the city should be held by the rector of the people instead of by the nobility; and that granaries should be opened for the public use. On the same day, amid general homage and applause, Rienzi was proclaimed head of the republic, with the title of tribune and liberator of the Holy Roman Republic, "by authority of the most merciful Lord Jesus Christ." The nobles withdrew scoffing but alarmed. Rienzi engaged a body-guard of one hundred men, and assumed the command of thirteen hundred infantry and three hundred and ninety light horse; he abolished the senators, retained the Thirteen

and the general and special councils, and set the administration on a new footing. These measures and the prompt submission of the other cities of the state brought an instant increase of revenue to Rome.

This revolution, as will be noted, was of an entirely novel stamp. For its leader despatched envoys to all the cities of Italy, exhorting them to shake off the yoke of their tyrants, and send representatives to the parliament convoked for the 1st August, inasmuch as the liberation of Rome also implied the "liberation of the sacred land of Italy." In Rienzi's judgment the Roman revolution must be, not municipal, but national, and even in some points universal. And this idea was welcomed with general enthusiasm throughout the peninsula. Solemn festivals and processions were held in Rome; and, when the tribune went in state to St Peter's, the canons met him on the steps chanting the *Veni, Creator Spiritus*. Even the pope, willingly or unwillingly, accorded his approval to Rienzi's deeds. The provincial cities did homage to Rome and her tribune, and almost all the rest of Italy gave him its enthusiastic adherence. The ancient sovereign people seemed on the point of resuscitation. And others besides the multitude were fascinated and carried off their feet. Great men like Petrarch were transported with joy. The poet lauded Cola di Rienzo as a sublime and supernatural being, the greatest of ancient and modern men. But it was soon evident that all this enthusiasm was mainly factitious. On the 26th of July a new parliament was called, and this decreed that all the rights and privileges granted to the empire and church must now be vested in the Roman people, from whom they had first emanated. But on the convocation of the national parliament few representatives obeyed the summons and the scheme was a failure. All had gone well so long as principles only were proclaimed, but when words had to be followed by deeds the municipal feeling awoke and distrust began to prevail. Nevertheless, on the 1st August Rienzi assumed the spurs of knighthood and passed a decree declaring that Rome would now resume her old jurisdiction over the world, invoking the Holy Spirit upon Italy, granting the Roman citizenship to all her cities, and proclaiming them free in virtue of the freedom of Rome. This was a strange jumble of the ancient Roman idea combined with the mediæval. It was a dream of Rienzi's brain, but it was also the dream of Dante and Petrarch. The conception of the empire and the history of Italy, particularly that of ancient and mediæval Rome, were inevitably preparing the way for the national idea. This Rienzi foresaw, and this constitutes the true grandeur of his character, which in other respects was not exempt from pettiness and infirmity. He pursued his course, therefore, undismayed, and had indeed gone too far to draw back. On the 15th August he caused himself to be crowned tribune with great pomp, and confirmed the rights of Roman citizenship to all natives of Italy. But practical matters had also to be taken into account, and it was here that his weakness and lack of judgment were shown. The nobles remained steadily hostile, and refused to yield to the charm of his words. Hence conflict was unavoidable; and at first Rienzi succeeded in vanquishing the Gaetani by means of Giovanni Colonna. He next endeavoured to suppress the Guelph and Ghibelline factions, and to restore Italy to "holy union" by raising her from her present abasement.

The pope, however, was weary of toleration, and, coming to terms with the nobles, incited them to war. They accordingly moved from Palestrina, and on the 30th November were encamped before Rome. Rienzi now put forth his energy. He had already called the militia to arms, and a gennine battle took place in which eighty

nobles, chiefly of the Colonna clan, were left dead. This was a real catastrophe to them, and the aristocracy never again achieved the rule of the republic. But Rienzi's head was turned by this sudden success. In great need of money, he began to play the tyrant by levying taxes and exacting instant obedience. The papal legate saw his opportunity and seized it, by threatening to bring a charge of heresy against the tribune. Rienzi was dismayed. He declared himself friendly to the pope and willing to respect his authority; and he even sought to conciliate the nobles. At this moment certain Neapolitan and Hungarian captains, after levying soldiers with the tribune's consent, joined the nobles and broke out in revolt. On their proving victorious in a preliminary encounter with some of Rienzi's guards, the tribune suddenly lost heart, resigned the power he had held for seven months, and took refuge with a few trusty adherents in Castle St Angelo, on the 15th December 1347. Thence he presently fled to Naples, vainly hoping to find aid, and afterwards disappeared for some time from the scene.

Meanwhile the Romans remained tranquil, intent on making money by the jubilee; but no sooner was this over than disorders broke out and the tyranny of the baronage recommenced. To remedy this state of things, application was made to the pope. He consulted with a committee of cardinals, who sought the advice of Petrarch, and the poet suggested a popular government, to the complete exclusion of the nobles, since these, he said, were strangers who ruined the city. The people had already elected the Thirteen, and now, encouraged by these counsels, on the 26th December 1351 chose Giovanni Perrone as head of the republic. But the new leader was unable to withstand the hostilities of the nobles; and in September 1353 Francesco Baroncelli was elected tribune. He was a follower of Rienzi, had been his ambassador to Florence, and did little beyond imitating his mode of government and smoothing the way for his return.

Rienzi had spent two years in the Abruzzi, leading a life of mystic contemplation on Monte Maiella. Then, in 1350, he had gone to Prague and endeavoured to convert to his ideas the yet uncrowned emperor Charles IV. When apparently on the point of success, he was sent under arrest to the new pope, Innocent VI. (1352-62), a man of great shrewdness and practical sense. On Rienzi's arrival at Avignon it became evident that his popularity was still very great, and that it would be no easy task to dispose of him. The Romans were imploring his return; Petrarch lauded him as a modern Gracchus or Scipio; and the pope finally released him from confinement. Innocent had decided to send to Italy, in order to settle affairs and bring the state into subjection to the church, that valiant captain and skilled politician, Cardinal Albornoz. And, having no fear that the latter's hand would be forced, he further decided that Rienzi should be sent to give him the support of his own popularity in Rome. In fact directly the pair arrived Baroncelli was overthrown, the supremacy of the senate granted to the pope, and the government confided to Albornoz, who, without concerning himself with Rienzi, nominated Guido Patrizi as senator. He then marched at the head of his troops against Giovanni, prefect of Vico, and forced him to render submission at Montefiascone on the 5th June 1354. With the same promptitude and skill he reduced Umbria and the Tuscan and Sabine districts, consented to leave the privileges of the cities intact in return for their recognition of the papal authority, and planted fortresses in suitable positions. In the meantime Rienzi's popularity was increasing in Rome; without either money or arms, the ex-tribune succeeded by his eloquence in winning over the two Provençal leaders, brothers of the famous free captain Fra Monreale;

and, seduced by his promises and hopes, they supplied him with funds. Then, profiting by his prestige, the apparent favour of the pope, and the sums received, he was able to collect a band of five hundred soldiers of mixed nationalities and returned towards Rome. On Monte Mario he was met by the cavallerotti. On the 1st August 1354 he entered the Castello gate, took possession of the government, named Monreale's two brothers his captains, and sent them to lay siege to Palestrina, which was still the headquarters of the Colonna. But then money ran short, and he again lost his head. Inviting Fra Monreale to a banquet, he put him to death for the sake of his wealth, and kept the two brothers in confinement. This act excited general indignation. And when, after his ill-gotten gains were spent, he again resorted to violence to fill his purse, the public discontent was vented in a sudden revolt on the 8th October. The people stormed the Capitol with cries of "Death to the traitor." Rienzi presented himself at a window waving the flag of Rome. But the charm was finally broken. Missiles were hurled at him; the palace was fired. He hid himself in the courtyard, shaved his beard, and disguised as a shepherd with a cloth over his head, slipped into the crowd and joined in their cries against himself. Being recognized, however, by the golden bracelets he had forgotten to remove, he was instantly stabbed. For two days his corpse was left exposed to the insults of the mob, and was then burned. Such was the wretched end of the man who, at one moment, seemed destined to fill the world with his name as the regenerator of Rome and of Italy.

In all the Italian cities the overthrow of the aristocracy had led to military impotence and pressing danger of tyranny. The same thing had happened in Rome when the nobility, weakened by the absence of church and empire, received its death blow from Rienzi. But, whereas elsewhere tyrants were gradually arising in the citizen class, Rome was always in danger of oppression by the pope. Nor was any aid available from the empire, which had never recovered from its abasement under Louis the Bavarian. In fact, when Charles of Luxembourg came to Rome to be crowned, he was obliged to promise the pope that he would not enter the city. On Easter day 1355 he received the crown, and departed, after counselling the Romans to obey the pope. And the pontiffs had greater need than ever of an established kingdom. Their position in France was much endangered by that country's disorder. New states were being formed on all sides; the mediæval unity was shattered; and the shrunken spiritual authority of the church increased her need of material strength. As Italian affairs stood, it would be easy for the popes to found a kingdom, but their presence was required in Rome before it could be firmly established. The blood-stained sword of Albornoz had prepared the way before them. In 1355-56 he vanquished the lords or tyrants of Rimini, Fano, Fossombrone, Pesaro, Urbino, and other cities. And all these places had been so rudely oppressed that the cardinal was often hailed as a liberator after subduing their masters by fire and sword. But everywhere he had been obliged to leave existing Governments and rulers *in statu quo* after exacting their oaths of fealty. Thus the state was still dissevered, and it was impossible to bind it together with the pope at Avignon and Rome a republic. Bologna was still independent, Ordelaffi still lord of Forlì; Cesena and other cities were still rebellious; and the Campagna was still in the hands of the barons. Some places were ruled by rectors nominated by the pope; at Montefiascone there was an ecclesiastical rector, with a bench of judges, and a captain commanding a mixed band of adventurers. Rome had submitted to the haughty cardinal, but hated him

Foreign
senators.

mortally, and, on his departure for Avignon in 1357 to assist the threatened pontiff, immediately conceded to the latter the supremacy of the senate. And the pope, instead of two senators, hastened to name a single one of foreign birth. This was a shrewd device of Albornoze and another blow to the nobles, with whom he was still at war. Thus was inaugurated, by the nomination of Raimondo de' Tolomei in 1358, a series of foreign senators, fulfilling the functions of a podestà, and changed every six months, together with their staff of judges, notaries, and knights. The people approved of this reform as being inimical to the nobles and favourable to the preservation of liberty. Hitherto the senators had been assisted, or rather kept in check, by the thirteen representatives of the regions. These were now replaced by seven reformers, in imitation of the priors of Florence, the better to follow that city's example. The reformers were soon the veritable chiefs of the republic. They first appeared in 1360, were either *popolani* or *cavallerotti*, and were elected by ballot every three months. When Albornoze returned to Italy, although desirous to keep Rome in the same subjection as the other cities, he had first to vanquish Ordelaffi and reduce Bologna. The latter enterprise was the more difficult task, and provoked a lengthy war with Matteo Visconti of Milan. Thus Rome, being left to herself, continued to be governed by her reformers; and the nobles, already shut out from power, were also excluded from the militia, which had been reorganized, like that of Florence, on the democratic system. Three thousand men, mostly archers, were enrolled under the command of two *banderesi*, "in the likeness," says M. Villani, "of our gonfaloniers of the companies," with four *antepositi* constituting a supreme council of war. And the whole body was styled the "Felix Societas Balestrariorum et Pavesatorum." It was instituted to support the reformers and re-establish order in the city and Campagna, to keep down the nobles and defend the republic. It fulfilled these duties with much, and sometimes excessive, severity. *Banderesi* and *antepositi* had seats in the special council beside those of the reformers, as, in Florence, the gonfaloniers of the companies were seated beside the priors. Later these officials constituted the so-called *signoria dei banderesi*. In 1362, the Romans having subjected Velletri, which was defended by the nobles, the latter made a riot in Rome. Thereupon the *banderesi* drove them all from the city, killed some of their kindred, and did not even spare the *cavallerotti*. The fight became so furious that from gate to gate all Rome was in arms, and even mercenaries were hired. But in the end renewed submission was made to the pope.

The
band-
eresi.

On the death of Innocent VI. in 1362, an agreement was concluded with his successor Urban V. (1362-70), also a Frenchman, who was obliged to give his sanction to the government of the reformers and *banderesi*. And then, Albornoze being recalled in disgrace to Avignon, and afterwards sent as legate to Naples, these Roman magistrates were able, with or without the co-operation of the foreign senator, to rule in their own way. They did justice on the nobles by hanging a few more; and they defended the city from the threatening attacks of the mercenaries, who had now become Italy's worst foes. It was at this period that the Roman statutes were revised and rearranged in the compilation erroneously attributed by some writers to Albornoze, which has come down to us supplemented by alterations of a later date.

But now the popes, being no longer in safety at Avignon, really decided to return to Italy. Even Urban V. had to pay ransom to escape from the threatened attacks of the free companies. The Romans implored his return, and he was further urged to it by the Italian

literati with Petrarch at their head. In April 1367 he finally quitted Avignon, and, entering Rome on the 16th October, was given the lordship of the city. Cardinal Albornoze had fallen mortally ill at Viterbo, but, though unable to accompany the pope to Rome, had, before dying, suggested his course of action. Certainly Urban showed much acumen in profiting by the first burst of popular enthusiasm to effect quick and dexterous changes in the constitution of the republic. After naming a senator, he abolished the posts of reformers and *banderesi*, substituting three conservators, or rather a species of municipal council, alone charged with judicial and administrative powers, which has lasted to the present day. The thirteen leaders of the regions and the consuls of the guilds still sat in the councils, which were left unsuppressed. But all real power was in the hands of the pope, who, in Rome, as in his other cities, nominated the principal magistrates. Thus, by transforming political into civil institutions and concentrating the supreme authority in his own grasp, Urban V. dealt a mortal blow to the liberties of Rome. Yet he felt no sense of security among a people who, after the first rejoicings over the return of the Holy See, were always on the brink of revolt. Besides he felt himself a stranger in Italy, and was so regarded. Accordingly, in April 1370 he decided to return to France; on the 20th of that month he wrote from Viterbo that no change was to be made in the government; and he died in Avignon on the 19th of December.

Urban V.
begins to
destroy
the re-
public.

The Romans retained the conservators, conferring on them the political power of the reformers; they re-established the *banderesi* with the Florentine title of *executores justitiæ* and the four *antepositi* with that of *consiliarii*. Thus the "Felix Societas Balestrariorum et Pavesatorum Urbis" was restored, and the two councils met as before. The new French pope, Gregory XI. (1370-78), had to be content with obtaining supremacy over the senate and the possession of the Castle St Angelo. It was a difficult moment for him. The Florentines had come to an open rupture with his legates, and had adopted the expedient of inviting all the cities of the Roman state to redeem their lost freedom. Accordingly in 1375 many of them rose against the legates, who were mostly French and regarded with dislike as foreigners. Florentine despatches, full of classical allusions and chiefly composed by the famous scholar, Secretary Coluccio Salutati, were rapidly sent in all directions. Those addressed to the Romans were specially fervid, and emphatically appealed to their patriotism and memories of the past. But the Romans received them with doubt and mistrust, for they saw that the revolution threatened to dismember the state, by promoting the independence of every separate city. Besides, while maintaining their republic, they also desired the pope's presence in Rome. Nevertheless they went with the current to the extent of reforming their constitution. In February 1376 they nominated Giovanni Cenci captain of the people, and gave him uncontrolled power over the towns of the patrimony and the Sabine land. The conservators, with their new political authority, the *executores*, the *antepositi*, and the two councils were all preserved, and a new magistracy was created, the "Tres Gubernatores Pacis et Libertatis Reipublicæ Romanæ." This answered to the Eight (afterwards Ten) of War in Florence, likewise frequently called the Eight of Liberty and Peace. It was this Council of Eight that was now directing the war against the pope and braving his sentence of excommunication; and their fiery zeal had won them the title of the Holy Eight from the Florentines.

Realizing that further absence would cost him his state, Gregory XI. quitted Avignon on the 13th September 1376, and, reaching Corneto in December, despatched to

Rome three legates, who, on the 21st of the month, concluded an agreement with the parliament. The people gave up the gates, the fortresses, and the Trastevere, and promised that if the pope returned to Rome he should have the same powers which had been granted to Urban V. But, on his side, he must pledge himself to maintain the executors, their council, the Three of War, and allow the Romans the right of reforming the banderesi, who would then swear fealty to him. The terms of this peace and the pope's epistles clearly prove that the two councils still exercised their functions, that the banderesi were still the virtual heads of the Government, and that their suppression was not contemplated. In fact, when the pope made his entry on the 17th January 1377 accompanied by two thousand armed men, he perceived that there was much public agitation, that the Romans did not intend to fulfil their agreement, and that the Government of the banderesi went on as before. Accordingly, after naming Gomez Albornoz, a nephew of the deceased cardinal, to the office of senator, he retired to Anagni, and remained there until November 1377. The Romans presently waited on him with conciliating offers, and begged him to negotiate a peace for them with the prefect of Vico. In fact the treaty was concluded at Anagni in October, and on the 10th November confirmed in Rome by the general council. The meeting was held in the great hall of the Capitol, "*ubi consilia generalia urbis fieri solent*," in the presence of all the members of the republican Government. But the pope was enraged by the survival of this Government, and, being worn out by the persistent hostility of the Florentines, which reduced his power to a low ebb, had determined to make peace, when surprised by death on the 27th March 1378.

The next pope, Urban VI. (1378-89), a Neapolitan, was the spirit of discord incarnate. His election was not altogether regular: the French party among the cardinals was against him; and the people were ripe for insurrection. But, regardless of all this, Urban threatened the cardinals in his first consistory, saying that church reform must begin with them; and he used the same tone with the people, reproving them for failing to suppress the banderesi. In consequence of this the cardinals of the French party, assembling at Fondi, elected the antipope Clement VII. (1378-94) and started a long and painful schism in the church. Clement resided in Avignon, while Urban in Rome was engaged in opposing Queen Joanna I. of Naples and favouring Charles of Durazzo, who, on conquering the Neapolitan kingdom, was made gonfalonier of the church and senator of Rome, where he left a vicar as his deputy. Shortly afterwards the pope went to Naples, and made fierce war on the king. Then, after many adventures, during which he tortured and put to death several cardinals whom he suspected of hostile intentions, he returned to Rome, where the utmost disorder prevailed. The conservators and the banderesi were still at the head of the Government, and, the pope speedily falling out with them, a riot ensued, after which he excommunicated the banderesi. These at last made submission to him, and Urban VI. became master of Rome before his death in 1389. He was succeeded by Boniface IX. (1389-1404), another Neapolitan, but a man of greater shrewdness and capacity. His first act was to crown Ladislaus king of Naples, and secure the friendship and protection of this ambitious and powerful prince. In all the principal cities of the state he chose the reigning lords for his vicars. But he allowed Fermo, Ascoli, and Bologna the privilege of assuming their own vicariate for twenty-five years. And, as these different potentates and Governments had only to pay him an annual tribute, all parties were satisfied, and the pope was able to bestow at least an

appearance of order and unity on his state. But fresh tumults soon arose, partly because the conservators and banderesi sought to govern on their own account, and especially because the pope seems for a time to have omitted naming the senator. Boniface was a prudent man; he saw that events were turning in his favour, now that throughout Italy liberty was tottering to its fall, and bided his time. He was satisfied for the moment by obtaining a recognition of the immunities of the clergy, rendering them solely amenable to ecclesiastical tribunals, and thus distinguishing the powers of the church from those of the state in Rome. The republic also pledged itself neither to molest the prelates nor to levy fresh contributions on them towards repairing the walls, to aid in recovering the estates of the church in Tuscia, and to try to conciliate the baronage. This concordat, concluded with the conservators and banderesi on the 11th September 1391, was also confirmed on the 5th March 1392 by the heads of the regions, together with a fresh treaty binding both parties to furnish a certain number of armed men to combat the prefect of Vico and the adherents of the antipope at Viterbo. With the exception of this city, Orchi, and Civita Vecchia, all other conquered territory was to belong to the republic. But the Romans soon discovered that they were playing into the hands of the pope, who kept everything for himself, without even paying the troops. Upon this a riot broke out; Boniface fled to Perugia in October 1392, and resolved to exact better terms when next recalled to Rome. Meanwhile the Romans subdued the prefect, captured Viterbo, and, being already repentant, handed it over to the pope and implored his return. He then proposed his own terms, which were approved, not only by the conservators, banderesi, and four councillors, but also by the special council and by the unanimous vote of a general assembly composed of the above-mentioned authorities, heads of regions, other officials, and a hundred citizens (8th August 1393). These terms prescribed that the pope was to elect the senator, and that, on his failing so to do, the conservators would carry on the government after swearing fealty to him. The senatorial function was to be neither controlled nor hampered by the banderesi. The immunities of the clergy were to be preserved, and all church property was to be respected by the magistrates. The expenses of the pope's journey were to be paid, and he was to be escorted to Rome in state. Boniface tried to complete his work by abolishing the banderesi, the last bulwarks of freedom; but the people, although weakened and weary, made efforts to preserve them, and, although their fall was inevitable, the struggle went on for some time.

During the spring of 1394 the banderesi provoked an insurrection in which the pope's life was endangered; it was only saved by the arrival of King Ladislaus, who came from Naples with a large force in the early autumn. But for the Neapolitan soldiery Boniface could not have withstood the long series of revolts that continually exposed him to fresh perils and the anxiety caused by the persistent schism of the church. The death of Clement VII. in 1394 was followed by the election of another antipope, Benedict XIII. But a new jubilee was in prospect for the year 1400, and this was always an efficacious means of bending the will of the Romans. Depending upon this and the assistance of Ladislaus, Boniface not only demanded full powers to nominate senators (none having been recently elected), but insisted on the suppression of the banderesi. Both requests were granted; but, directly Angelo Alaleoni was made senator, a conspiracy was hatched for the re-establishment of the banderesi. However, the pope felt sure of his strength; the plot was discovered and the conspirators were beheaded

Fall of the banderesi and of the republic.

on the stairs of the Capitol. This proved the end of the *banderesi* and of the liberties of Rome. The government was again directed by an alien senator together with three conservators, but the latter were gradually deprived of their political attributes, and became mere civil officers. The militia, regions, guilds, and other associations now rapidly lost all political importance, and before long were little more than empty names. Thus in 1398 the Romans submitted to the complete sway of the pope, and in July of the same year the senator chosen by him was Malatesta dei Malatesti of Rimini, one of a line of tyrants, a valiant soldier, who was also temporal vicar and captain general of the church. Boniface continued to appoint foreign senators during the rest of his life; he fortified Castle St Angelo, the Vatican, and the Capitol; he stationed galleys at the mouth of the Tiber, and proved himself in all things a thoroughly temporal prince. He aggrandized all his kindred, especially his brother, and, with the aid of his senator, his armed force, and the protection of Ladislaus, succeeded in keeping down all the surviving nobles. In 1400, however, these made an attempt to upset the Government. Niccolò Colonna forced his way into the city with cries of "Popolo, popolo! death to Boniface!" But the Romans had grown deaf to the voice of liberty; they refused to rise, and the senator, a Venetian named Zaccaria Trevisan, behaved with much energy. Colonna and his men had to beat a swift retreat to Palestrina. A charge of high treason was immediately instituted against him, and thirty-one rebels were beheaded. The pope then proclaimed a crusade against all the Colonna, and sent a body of two thousand men and some of the Neapolitan soldiery to attack them. Several of their estates were seized and devastated, but Palestrina continued to hold out, and on the 7th January 1401 the Colonna finally made submission to the pope. Nevertheless they obtained advantageous terms, for Boniface left them their lands, appointed them vicars of other territories, and made similar agreements with the Gaetani and Orsini. In this way he became absolute master of Rome. One chronicler remarks that "*Romanis tanquam rigidus imperator dominabatur*," and the same tone is taken by others. But he did not succeed in putting an end to the schism of the church, which was still going on when he died in the Vatican on the 1st October 1404.

Innocent VII. (1404-6) was the next pope. He too was a Neapolitan, and on his election the people again rose in revolt and refused to acknowledge him unless he consented to resign the temporal power. But Ladislaus of Naples hastened to his help, and an agreement was made which, under the cover of apparent concessions, really riveted the people's chains. Rome was recognized as the seat of the temporal and spiritual sovereignty of the pope, and the pope continued to appoint the senator. The people were to elect seven governors of the city, who were to swear fealty to the pope and carry on the government in conjunction with three other governors chosen by the pontiff or Ladislaus. The stipulations of Boniface IX. concerning ecclesiastical immunities were again confirmed. The barons were forbidden to place more than five lances each at the service of the people, and—which was the real gist of the covenant—the people were henceforth forbidden to make laws or statutes without the permission of the pope. The captain of the people, deprived of his political and judicial functions and reduced to a simple judge, was also to be chosen by the pope. But this treaty, drawn up on the 27th October 1404, was not signed at the time, and many difficulties and disturbances arose when its terms were to be put into effect. The Romans nominated the seven governors, but, without waiting until the pope had chosen three more, placed the state in their hands,

and styled them governors of the liberty of the Roman republic. They were in fact *banderesi* or *reformatori* under a new name. But the attempt proved inefficacious, for, at the pope's first threat of departure, the Romans made their submission, and the treaty of October was subscribed on the 15th May 1405. Nevertheless, as it only bears the signatures of the "seven governors of the liberty of the Roman republic," the pope would seem to have made some concessions. His position was by no means assured. Ladislaus was known to aspire to absolute dominion in Italy, and, although willing to aid in suppressing the republic, tried to prepare the way for his own designs, and frequently held out a helping hand to the vanquished. On the 6th August fourteen influential citizens of Rome boldly presented themselves at the Vatican, and in a threatening manner called the pope to account for giving his whole attention to worldly things, instead of endeavouring to put a stop to the schisms of the church. But, on leaving his presence, they were attacked by Luigi Migliorati, the pope's nephew, and notorious for his violence, who killed eleven of their number, including several heads of the regions and two of the governors. An insurrection ensued, and the pope and his nephew fled to Viterbo. The Colonna tried to profit by these events, and applied to Ladislaus, who, hoping that the moment had come to make himself master of Rome, sent the count of Troia thither with a troop of three thousand horse. But the people, enraged by this treachery, and determined not to fall under the yoke of Naples, awoke for an instant to the memory of their past glories, and bravely repulsed the Colonna and the Neapolitans. And, on the speedy arrival of the Orsini with some of the papal troops, the people voluntarily restored the papal government, and, assembling the parliament, besought the pope to return on his own terms. Accordingly, after first naming Francesco Panciatichi of Pistoia to the senatorship, the pope came back on the 13th March 1406, bringing his whole curia with him, and also the murderer Migliorati, who, triumphing in impunity, became more arrogant than before. Here indeed was a proof that the Romans were no longer worthy of liberty! And now, by means of the Orsini, Innocent had only to reduce the Colonna and other nobles raised to power by Ladislaus; nor was this very difficult, seeing that the king, in his usual fashion, abandoned them to their fate, and, making terms with the pope, was named gonfalonier of the church and again protected her cause.

Innocent, dying in 1406, was succeeded by Gregory XII., a Venetian, who, as we shall presently see, resigned the chair in 1415. On his accession, finding his state firmly established, he seemed to be seriously bent on putting an end to the Great Schism, and for that purpose arranged a meeting with the antipope Benedict XIII. at the congress of Savona in 1408. But Gregory and Benedict only used the congress as a pretext for making war upon each other, and were urged on by Ladislaus, who hoped by weakening both to gain possession of Rome, where, although opposed by the Orsini, he had the support of the Colonna. Gregory, who had then fled from Rome, made a momentary attempt to win the popular favour by restoring the government of the *banderesi*; but Ladislaus marched into Rome in June 1408 and established a senator of his own. Meanwhile the two popes were continuing their shameful struggle, and the council of Pisa (March 1409), in attempting to check it, only succeeded in raising up a third pontiff, first in the person of Alexander V. (1409-10), and then in the turbulent Baldassare Cossa, who assumed the name of John XXIII. The latter began by sending a large contingent to assist Louis of Anjou against Ladislaus. But the enterprise failed, and, seeing himself deserted by all, Pope John next embraced the cause of his foe by

Ladislaus
master of
Rome.

naming him gonfalonier of the church. Thereupon Ladislaus concluded a sham peace, and then, seizing Rome, put it to the sack and established his own government there. Thus John, like the other two popes, became a wanderer in Italy. In August 1414 Ladislaus died and was succeeded by the scandalous Queen Joanna II. The Roman people promptly expelled the Neapolitans, and Cardinal Isolani, John's legate, succeeding in rousing a reaction in favour of the church, constituted a government of thirteen "conservators" on the 19th October.

In November 1414 the council of Constance assembled, and at last ended the schism by deposing all the popes, and incarcerating John XXIII., the most turbulent of the three. On the 11th November 1417 Oddo Colonna was unanimously elected to the papal chair; he was consecrated in the cathedral on the 27th as Pope Martin V., and, being acknowledged by all, hastened without delay to take possession of his see. Meanwhile disorder was at its height in Rome. The cardinal legate Isolani governed as he best could, while Castle St Angelo remained in the hands of the Neapolitans, who still had a party in the city. In this divided state of affairs Braccio, a daring captain of adventurers, nicknamed Fortebraccio, was inspired with the idea of making himself master of Rome. Overcoming the feeble resistance opposed to him, he succeeded in this on the 16th June 1416 and assumed the title of "Defensor Urbis." But Joanna of Naples despatched Sforza, an equally valiant captain, against him, and, without offering battle, Fortebraccio withdrew on the 26th August, after having been absolute master of the eternal city for seventy days. Sforza marched in on the 27th, and took possession of the city in the name of Joanna. Martin V. instantly proved himself a good statesman. He confirmed the legate Isolani as his vicar, and Giovanni Savelli as senator. Leaving Constance on the 16th May 1418, he reached Milan on the 12th October, and slowly proceeded on his journey. While in Florence he despatched his brother and nephew to Naples to make alliance with Joanna, and caused her to be crowned on the 28th October 1419 by his legate Morosini. Upon this she promised to give up Rome to the pope. Her general, Sforza, then entered the service of Martin V., and compelled Fortebraccio, who was lingering in a threatening attitude at Perugia, to make peace with the pope. The latter entrusted Fortebraccio with the conduct of the campaign against Bologna, and that city was reduced to submission on the 15th July 1420. The Romans had already yielded to Martin's brother the legate, and now earnestly besought the arrival of their pope. Accordingly he left Florence on the 19th September 1420, and entered the Vatican on the 28th. Rome was in ruins; nobility and burghers were equally disorganized, the people unable to bear arms and careless of their rights, while the battered walls of the Capitol recorded the fall of two republics.

Martin V. had now to fulfil a far more difficult task than that of taking possession of Rome. Throughout Italy municipal freedom was overthrown, and the Roman republic had ceased to exist. The Middle Ages were ended; the Renaissance was beginning. The universal unity both of church and of empire was dissolved; the empire was now Germanic, and derived its principal strength from direct dominion over a few provinces. Independent and national states were already formed or forming on all sides. The papacy itself had ceased to claim universal supremacy over the world's Governments, and the possession of a temporal state had become essential to its existence. In fact Martin V. was the first of the series of popes who were real sovereigns, and more occupied with politics than religion. Involved in all the

foreign intrigues, falsehoods, and treacheries of Italian diplomacy in the 15th century, their internal policy was imbued with all the arts practised by the tyrants of the Renaissance, and nepotism became necessarily the basis of their strength. It was natural that men suddenly elected sovereigns of a new country where they had no ties, and of which they had often no knowledge, should seek to strengthen their position by aggrandizing so-called nephews who were not unfrequently their sons.

Martin V. reduced the remains of the free Roman Government to a mere civil municipality. Following the method of the other despots of Italy, the old republican institutions were allowed to retain their names and forms, their administrative and some of their judicial attributes, while all their political functions were transferred to the new Government. Order was re-established, and justice rigidly observed. Many rebellious places were subdued by the sword, and many leaders of armed bands were hanged. The pope, however, was forced to lean on his kinsmen the Colonna and again raise them to power by grants of vast fiefs both in his own state and the Neapolitan territory. And, after first supporting Joanna II., who had assisted his entry into Rome, he next sided with her adversary, Louis of Anjou, and then with Alphonso of Aragon, the conqueror of both and the constant friend of the pope, who at last felt safe on his throne. Rome now enjoyed order, peace, and security, but had lost all hope of liberty. And when Martin died (20th February 1431) these words were inscribed on his tomb, *Temporum suorum felicitas*.

Eugenius IV. (1431-47) leant on the Orsini, and was fiercely opposed by the Colonna, who excited the people against him. Accordingly on the 29th May 1434 the Romans rose in revolt to the old cry of "Popolo e popolo," and again constituted the rule of the seven governors of liberty. The pope fled by boat down the Tiber, and, being pursued with stones and shots, narrowly escaped with his life. On reaching Florence, he turned his energies to the recovery of the state. It was necessary to quell the people; but, first of all, the Colonna and the clan of the prefects of Vico, with their renewed princely power, had to be overthrown. The Orsini were still his friends. Eugenius entrusted the campaign to Patriarch (afterwards Cardinal) Vitelleschi, a worthy successor of Alborno, and of greater ferocity if less talent. This leader marched his army towards Rome, and, instantly attacking Giovanni, prefect of Vico, captured and beheaded him. The family was now extinguished; and, its possessions reverting to the church, the greater part of them were sold or given to Count Everso d'Anguillara, of the house of Orsini. The prefecture, now little more than an honorary title, was bestowed at will by the popes. Eugenius gave it to Francesco, founder of the powerful line of the Gravina-Orsini. Thus one noble family was raised to greatness while another perished by the sword. Vitelleschi had already begun to persecute the Colonna and the Savelli, and committed terrible slaughter among them. Many castles were demolished, many towns destroyed; and their inhabitants, driven to wander famine-stricken over the Campagna, had to sell themselves as slaves for the sake of bread. Finally the arrogant patriarch marched into Rome, as into a conquered city, at the head of his men, and the Romans crouched at his feet. The pope now began to distrust him, and sent Scarampo, another prelate of the same stamp, to take his place. This new commander soon arrived, and, perceiving that Vitelleschi proposed to resist, had him surrounded by his soldiers, who were obliged to use force to compel his surrender. Vitelleschi was carried bleeding to Castle St Angelo, where he soon afterwards died. The pope at last returned to Rome in 1443. and remained there quietly till his death in 1447

IV.
resumes
possession

Con-
spiracy of
Stefano
Porcari.

His successor Nicholas V. (1447-55) was a scholar solely devoted to the patronage of literati and artists. During his reign there was a fresh attempt to restore the republic, but it was rather prompted by literary and classical enthusiasm than by any genuine patriotic ardour. Political passions and interests had ceased to exist. The conspiracy was headed by Stefano Porcari, a man of the people, who claimed to be descended from Cato. He had once been captain of the people in Florence, and was made podestà of Bologna by Eugenius IV. He was a caricature of Cola di Rienzo, and extravagantly proud of his Latin speeches in honour of ancient republican liberty. The admiration of antiquity was then at its height, and Porcari found many enthusiastic hearers. Directly after the death of Eugenius IV. he made a first and unsuccessful attempt to proclaim the republic. Nevertheless Nicholas V., with the same indulgence for scholars that had prompted him to pardon Valla for denying the temporal power of the papacy and laughing to scorn the pretended donation of Constantine, freely pardoned Porcari and named him podestà of Anagni. He filled this office with credit, but on his return to Rome again began to play the agitator, and was banished to Bologna with a pension from the pope. Nicholas V. had conferred all the state offices upon priests and abbots, and had erected numerous fortresses. Hence there were many malcontents in Rome, in communication with Porcari at Bologna, and ready to join in his plot. Arms were collected, and on the day fixed he presented himself to his fellow-conspirators adorned with rich robes and a gold chain, and harangued them in Latin on the duty of freeing their country from the yoke of the priests. His design was to set fire to the Vatican on the 6th January 1453, the feast of the Epiphany; he and his followers were to seize the pope, the cardinals, and Castle St Angelo. But Nicholas received timely warning; the conspirators' house was surrounded; and Porcari himself was seized while trying to escape, confined in Castle St Angelo, and put to death with nine of his companions on the 9th January. Others shortly suffered the same fate.

Under Calixtus III. and Pius II. affairs went on quietly enough, but Paul II. (1464-71) had a somewhat troubled reign. Yet he was a skilled politician. He re-ordered the finances and the courts of justice, punished crime with severity, was an energetic foe to the Malatesta of Rimini, put an end to the oppression exercised in Rome by the wealthy and arrogant house of Anguillara, and kept the people in good humour with continual festivities. But—and this was a grave defect at that period—he extended no favour to learning, and, by driving many scholars from the curia to make room for his own kinsmen, brought a storm about his ears. At that time the house of Pomponio Leto was the rendezvous of learned men and the seat of the Roman Academy. Leto was an enthusiast of antiquity; and, as the members of the Academy all assumed old Latin names, they were suspected of a design to re-establish paganism and the republican government. It is certain that they all inveighed against the pope; and, as the latter was no man of half measures, during the carnival of 1468 he suddenly imprisoned twenty Academicians, and even subjected a few of them to torture. Pomponio Leto, although absent in Venice, was also arrested and tried; but he exculpated himself, craved forgiveness, and was set at liberty. His friends were also released, for the charge of conspiracy proved to be unfounded. Certain members of the Academy, and notably Platina in his *Lives of the Popes*, afterwards revenged themselves by stigmatizing Paul II. as the persecutor of philosophy and letters. But he was no more a persecutor than a patron of learning; he was a politician, the author of some useful reforms, and solely intent on the consolidation of his

absolute power. Among his reforms may be classed the revision of the Roman statutes in 1469, for the purpose of destroying the substance while preserving the form of the old Roman legislation, and entirely stripping it of all political significance. In fact the pope's will was now absolute, and even in criminal cases he could trample unhindered on the common law.

There was still a senator of Rome, whose nomination was entirely in the hands of the pope, still three conservators, the heads of the rioni, and an elected council of twenty-six citizens. Now and then also a shadowy semblance of a popular assembly was held to cast dust in the eyes of the public, but even this was not for long. All these officials, together with the judges of the Capitol, retained various attributes of different kinds. They administered justice and gave sentence. There were numerous tribunals all with undefined modes of procedure, so that it was very difficult for the citizens to ascertain in which court justice should be sought. But in last resort there was always the supreme decision of the pope. Thus matters remained to the time of the French Revolution.

For the completion of this system a final blow had to be dealt to the aristocracy, whose power had been increased by nepotism; and it was dealt by bloodshed under the three following popes—Sixtus IV. (1471-84), Innocent VIII. (1484-92), and Alexander VI. (1492-1503)—each of whom was worse than his predecessor. The first, by means of his nephews, continued the slaughter of the Colonna, sending an army against them, devastating their estates at Marino, and beheading the protonotary Lorenzo Colonna. Innocent VIII. was confronted by the power of the Orsini, who so greatly endangered his life by their disturbances in the city that he was only saved by an alliance with Naples. Neither peace nor order could be lastingly established until these arrogant barons were overthrown. This task was accomplished by the worst of the three pontiffs, Alexander VI. All know how the massacre of the Orsini was compassed, almost simultaneously, by the pope in Rome and his equally iniquitous son, Caesar Borgia, at Sinigaglia (1502). This pair dealt the last blow to the Roman aristocracy and the tyrants of Romagna, and thus the temporal dominion of the papacy was finally assured. The republic was now at an end; it had shrivelled to a civil municipality. Its institutions, deprived of all practical value, lingered on like ghosts of the past, subject from century to century to unimportant changes. The history of Rome is henceforth absorbed in that of the papacy.

Nevertheless the republic twice attempted to rise from its grave, and on the second occasion gave proofs of heroism worthy of its past. It was first resuscitated in February 1798, by the influence of the French Revolution, and the French constitution of the year III. was rapidly imitated. Rome had again two councils—the tribunate and the senate, with five consuls constituting the executive power. But in the following year, owing to the military reverses of the French, the government of the popes was restored until 1809, when Napoleon I. annexed to his empire the States of the Church. Rome was then governed by a *consulta straordinaria*—a special commission—with the municipal and provincial institutions of France. In 1814 the papal government was again reinstated, and the old institutions, somewhat modified on the French system, were recalled to life. Pius IX. (1846-77) tried to introduce fresh reforms, and to improve and simplify the old machinery of state; but the advancing tide of the Italian revolution of 1848 drove him from Rome; the republic was once more proclaimed, and had a brief but glorious existence. Its programme was dictated by Joseph Mazzini, who with Saffi and Armellini formed the triumvirate at the head of the Government. United Italy was to be a

publican
ten-
dencies.

republic with Rome for her capital. The rhetorical idea of Cola di Rienzo became heroic in 1849. The constituent assembly (9th February 1849) proclaimed the fall of the temporal power of the popes, and the establishment of a republic which was to be not only of Rome but of all Italy. France, although then herself a republic, assumed the unenviable task of re-establishing the temporal power by force of arms. But the gallant defence of Rome by General Garibaldi covered the republic with glory. The enemy was repulsed, and the army of the Neapolitan king, sent to restore the pope, was also driven off. Then, however, France despatched a fresh and more powerful force; Rome was vigorously besieged, and at last compelled to surrender. With June 1849 begins the new series of pontifical laws designed to restore the government of Pius IX., whose reign down to 1870 was that of an absolute sovereign. Then the Italian Government entered Rome (20th September 1870), proclaimed the national constitution (9th October 1870), and the Eternal City became the capital of Italy. Thus the scheme of national unity, the natural outcome of the history of Rome and of Italy, impossible of accomplishment under the rule of the popes, was finally achieved by the monarchy of Savoy, which, as the true representative and personification of Italian interests, has abolished the temporal power of the papacy and made Rome the seat of government of the united country.

PART II.—TOPOGRAPHY AND ARCHÆOLOGY.

Rome¹ is situated (41° 53' 52" N. lat., 12° 28' 40" E. long.) on the banks of the Tiber, Italy, 14 miles from its present mouth, in a great plain of alluvial and marine deposit, broken into elevations by numerous masses of volcanic matter. The nine or ten hills and ridges on which the city stands are formed of masses of tufa or conglomerated sand and ashes thrown out by neighbouring volcanoes now extinct, but active down to a very recent period. One group of these volcanoes is that around Lago Bracciano, while another, still nearer to Rome, composes the Alban Hills. That some at least of these craters have been in a state of activity at no very distant period has been shown by the discovery at many places of broken pottery and bronze implements below the strata of tufa or other volcanic deposits. Traces of human life have even been found below that great flood of lava which, issuing from the Alban Hills, flowed towards the site of Rome, only stopping about 3 miles short, by the tomb of Cecilia Metella.

Site.

The superficial strata on which Rome is built are of three main kinds: (1) the plains and valleys on the left bank of the Tiber are covered, as it were, by a sea of alluvial deposit, in the midst of which (2) the hills of volcanic origin rise like so many islands; and (3) on the right bank of the Tiber, around the Janiculan and Vatican Hills, are extensive remains of an ancient sea-beach, conspicuous in parts by its fine golden sand and its deposits of greyish white potter's clay. From its yellow sand the Janiculan has been sometimes known as the Golden Hill, a name which survives in the church on its summit called S. Pietro in Montorio (Monte d'Oro). In addition to these three chief deposits, at a few places, especially in the Aventine and Pincian Hills, under-strata of travertine crop out—a hard limestone rock, once in solution in running water, and deposited gradually as the water lost its carbonic-acid solvent, a process still rapidly going on at Terni, Tivoli, and other places in the neighbourhood. The conditions under which the tufa hills were formed have been very various, as is clearly seen by an examination of the rock at different places. The volcanic ashes and sand of which the tufa is composed appear in parts to lie just as they were showered down from the crater; in that case it shows but little sign of stratification, and consists wholly of igneous products. In parts time and pressure have bound together these

scoriae into a soft and friable rock; in other places they still lie in loose sandy beds and can be dug out with the spade. Other masses of tufa again show signs either of having been deposited in water, or else washed away from their first resting-place and redeposited with visible stratifications; this is shown by the water-worn pebbles and chips of limestone rock, which form a conglomerate bound together by the volcanic ashes into a sort of natural cement. A third variety is that which exists on the Palatine Hill. Here the shower of red-hot ashes has evidently fallen on a thickly-growing forest, and the burning wood, partly smothered by the ashes, has been converted into charcoal, large masses of which are embedded in the tufa rock. In some places charred branches of trees, their form well preserved, can be easily distinguished. The so-called "wall of Romulus" is built of this conglomerate of tufa and charred wood; a very perfect section of the branch of a tree is visible on one of the blocks by the Scalæ Caci.

So great have been the physical changes in the site of Rome Physical since the first dawn of the historic period that it is difficult now changes to realize what its aspect once was. The Forum Romanum, the in site. Velabrum, the great Campus Martius (now the most crowded part of modern Rome), and other valleys were once almost impassable marshes or pools of water (Ov., *Fast.*, vi. 401; Dionys., ii. 50). The draining of these valleys was effected by means of the great cloacæ, which were among the earliest important architectural works of Rome (Varro, *Ling. Lat.*, iv. 149). Again, the various hills and ridges were once more numerous and very much more abrupt than they are now. At an early period, when each hill was crowned by a separate village fort, the great object of the inhabitants was to increase the steepness of its cliffs and render access difficult. At a later time, when Rome was united under one government, the very physical peculiarities which had originally made its hills so populous, through their natural adaptability for defence, became extremely inconvenient in a united city, where architectural symmetry and splendour were above all things aimed at. Hence the most gigantic engineering works were undertaken: tops of hills were levelled, whole ridges cut away, and gentle slopes formed in the place of abrupt cliffs. The levelling of the Velia and the excavation of the site for Trajan's forum are instances of this. The same works were continued in the Middle Ages, as when in the 14th century an access was made to the Capitoline Arx² from the side of the Campus Martius; up to that time a steep cliff had prevented all approach except from the side of the Forum.

¹ The limited space available for the following article is devoted mainly to those buildings of which some remains still exist, to the unavoidable neglect of a large number which are known only from documentary evidence. The plan of the Forum (Plate VII.) and nearly all the cuts have been measured and drawn by the author specially to illustrate this article.

² By the great flight of marble steps up to S. Maria in Ara Coeli.

And under the present Government an even more extensive plan, called the "piano regolatore," is being (1886) gradually carried out, with the object of reducing hills and valleys to one uniform level, on which wide boulevards are being constructed on the chess-board plan of an American city. The constant fires which have devastated Rome have been a great agent in obliterating the natural contour of the ground. The accumulated rubbish from these and other causes has in some places covered the ground to the depth of 40 feet, especially in the valleys.

Climate
and
health.

The climate of Rome in ancient times appears to have been colder than it is at present. Malarious fever in and around the city existed to some extent, but to a much less degree than it does now. The magnificent villa of Hadrian and other country houses near Rome are built on sites which are now very unhealthy. The sanitary superiority of the Campagna in ancient times was mainly due to its more complete drainage and thicker population. That fever did exist is, however, proved in many ways. Altars to the goddess Febris were erected on the Palatine and other hills, and on the Esquiline was a grove dedicated to Mephitis. The population of Rome¹ increased with great rapidity, till, during its most populous period in the 4th century, it was probably not less than 2½ millions.²

ANCIENT ROME.

Architecture and Construction.

Building materials. The chief building materials used in ancient Rome were those enumerated below. (1) *Tufa*, the "ruber et niger topus" of Vitruvius (ii. 7), the formation of which has been described above, is usually a warm brown or yellow colour. The Aventine, Palatine, and Capitoline Hills contained quarries of the tufa, much worked at an early period (see Liv., xvi. 27, xxxix. 44, and Varro, L.L., iv. 151). It is a very bad "weather-stone," but stands well if protected with stucco (Plin., H.N., xxxvi. 48). (2) *Lapis Albanus*, from Alba Longa, is also of volcanic origin, a conglomerate of ashes, gravel, and fragments of stone; its quarries are still worked at Albano and Marino. (3) *Lapis Gabinus*, from Gabii, is very similar to the last, but harder and a better weather-stone; it contains large lumps of broken lava, products of an earlier eruption, and small pieces of limestone. According to Tacitus (Ann., xv. 48), it is fire-proof, and this is also the case with the Alban stone. Both are now called *peperino*, from the black scoria, like peppercorns, with which the brown conglomerate mass is studded. (4) *Silex* (mod. *selce*), a lava from the now extinct volcanoes in the Alban Hills, was used for paving roads, and when broken into small pieces and mixed with lime and pozzolana formed an immensely durable concrete. It is dark grey, very hard, and breaks with a slightly conchoidal fracture (Plin., H.N., xxxvi. 29; Vitruvius, ii. 7), but does not resemble what is now called *silex* or flint. (5) *Lapis Tiburtinus* (travertine), the chief quarries of which are at Tibur (Tivoli) and other places along the river Anio, is a hard pure carbonate of lime, of a creamy white colour, deposited from running or dripping water in a highly stratified form, with frequent cavities and fissures lined with crystals. As Vitruvius (ii. 5) says, it is a good weather-stone, but is soon calcined by fire. If laid horizontally it is very strong, but if set on end its crystalline structure is a great source of weakness, and it splits from end to end. Neglect on the part of Roman builders of this important precaution in many cases caused a complete failure in the structure. This was notably the case in the rostra (see below). (6) *Pulvis Puteolanus* (pozzolana), so called from extensive beds of it at Puteoli, is a volcanic product, which looks like red sandy earth, and lies in enormous beds under and round the city of Rome. When mixed with lime it forms a very strong hydraulic cement, of equal use in concrete, mortar, or undercoats of stucco. It is to this material that the concrete walls of Rome owe their enormous strength and durability, in many cases far exceeding those of the most massive stone masonry. Vitruvius devotes a chapter (bk. ii. ch. 6) to this very important material.

Bricks were either sun-dried or kiln-baked (*lateres crudi aut cotti*). The remarks of Vitruvius (ii. 3) seem to refer wholly to sun-dried bricks, of which no examples now exist in Rome. It is very important to recognize the fact that among the existing ancient buildings of Rome there is no such thing as a brick wall or a brick arch in the true sense of the word; bricks were merely used as a facing to concrete walls and arches and have no constructional importance. Concrete (*furura, cementum, or opus structurae cementiciae*, Vitruvius, ii. 4, 6, 8), the most important of all the materials used, is made of rough pieces of stone or of fragments of brick, averaging from about the size of a man's fist and embedded in cement made of lime and pozzolana,—forming one solid mass of enormous

strength and coherence. Stucco, cement, and mortar (*tectorium, opus albarium, structura testacea*, and other names) are of many kinds; the ancient Romans especially excelled in their manufacture. The cement used for lining the channels of aqueducts (*opus signinum*) was made of lime mixed with pounded brick or potsherds and pozzolana; the same mixture was used for floors under the "nucleus" or finer cement on which the mosaic or marble paving-slabs were bedded, and was called *cementum ex testis tunsis*. For walls, three or four coats of stucco were used, often as much as 5 inches thick altogether; the lower coats were of lime and pozzolana, the finishing coats of powdered white marble (*opus albarium*) suitable to receive painting. Even marble buildings were usually coated with a thin layer of this fine white stucco, nearly as hard and durable as the marble itself—a practice also employed in the finest buildings of the Greeks—probably because it formed a more absorbent ground for coloured decoration; stone columns coated in this way were called "columnæ dealbatæ" (Cic., *In Verr.*, ii. 1, 52 sq.). For the kinds of sand used in mortar and stucco Vitruvius (ii. 4) mentions sea, pit, and river sand, saying that pit sand is to be preferred.

Marble appears to have come into use about the beginning of the Decadence, 1st century B.C. Its introduction was at first viewed with great jealousy, as savouring of Greek luxury. The orator Crassus was material the first to use it in his house on the Palatine, built about 92 B.C.; and, though he had only six small columns of Hymettian marble, he was for this luxury nicknamed the "Palatine Venus" by the stern republican M. Brutus (Plin., H.N., xxxvi. 3). The temporary wooden theatre of the ædile M. Æmilius Scaurus, built in 58 B.C., appears to have been the first building in which marble was more largely used; its 360 columns and the lower order of its scena were of Greek marble (see Plin., H.N., xxxvi. 3, 24). In a very few years, under the rule of Augustus, marble became very common.³

Of white statuary marble four principal varieties were used. (1) *Marmor Lunense*, from Luna, near the modern Carrara (Strabo, v.), is of many qualities, from the purest creamy white and the finest grain to the coarser sorts disfigured with bluish grey streaks. (Ex., the eleven Corinthian columns in the Dogana di Terra.) (2) *Marmor Hymettium*, from Mount Hymettus, near Athens, is coarser in grain than the best Luna marble and is usually marked with grey or blue striations (Strabo, x.). (Ex., the forty-two columns in the nave of S. Maria Maggiore and the columns in S. Pietro in Vincoli.) (3) *Marmor Pentelicum*, from Mount Pentelicus, also near Athens, is very fine in grain and of a pure white; it was more used for architectural purposes than for statues, though some sculptors preferred it above all others, especially Scopas and Praxiteles (Paus., *Arcad.*, viii.). (Ex., the bust of the young Augustus in the Vatican.) (4) *Marmor Parium*, from the Isle of Paros, is very beautiful, though coarse in texture, having a very crystalline structure.

Nine chief varieties of coloured marbles were used in Rome. (1) Coloured *Marmor Numidicum* (mod. *giallo antico*; Plin., H.N., v. 3), from marbles. Numidia and Libya, hence also called *Libycum*, is of a rich yellow, deepening to orange and even pink. Enormous quantities of it were used, especially for columns, wall-linings, and pavements. (Ex., six large columns in the Pantheon and seven on the arch of Constantine, taken from the arch of Trajan; the eighth column is in the Lateran basilica.) (2) *Marmor Carystium* (mod. *cipollino*), from Carystus in Eubœa (Strabo, x.), has alternate wavy strata of white and pale green—the "undosa Carystos" of Statius (*Silv.*, i. 5, 36). From its well-defined layers like an onion (*cipolla*) is derived its modern name. (Ex., columns of temple of Faustina.) (3) *Marmor Phrygium* or *Synnadicum* (mod. *pavonazetto*), from Synnada in Phrygia (Strabo, xii.; Juv., xiv. 307; Tibull., iii. 3, 13), is a slightly translucent marble, with rich purple markings, violet verging on red. It was fabled to be stained with the blood of Atys (Stat., *Silv.*, i. 5, 36). (Ex., twelve fluted columns in S. Lorenzo fuori le Mura, and large columns in the apse of S. Paolo fuori, saved from the ancient nave of the basilica, burnt in 1823.) (4) *Marmor Iasiu*m (probably the modern *porta santa*), from Iasus, is mottled with large patches of dull red, olive green, and white. The "holy door" of St Peter's is framed with it, hence its modern name. (Ex., the slabs in front of the Græpostasis and four columns in S. Agnese fuori le Mura.) (5) *Marmor Chium* (probably the modern *Africano*), from Chios, is similar in colour and marking to the porta santa, but more brilliant in tint. (Ex., a great part of the paving of the Basilica Julia and two large columns in the centre of the façade of St Peter's.) (6) *Rosso antico* (the ancient name is unknown) is a very close-grained marble of a rich deep red, like blood. As a rule it does not occur in large pieces, but was much used for

¹ See a good article on this subject in the *Monografia di Roma*, vol. ii., 1878.

Botany and Zoology.—Bonaparte, *Fauna Italica*, 1835; Sanguinetti, *Prodromus Floræ Romanæ*; Deakin, *Flora of the Colosseum*, 1855; Terrigi, "Flora, &c., del Quirinale," in *Acad. Pont. d. Lincei*, May 1882.

³ The oft-quoted boast of Augustus (Suet., *Aug.*, 29) that he "found Rome of brick and left it of marble" has probably much truth in it, if for "brick" we read "peperino and tufa." In the time of Augustus burnt brick was very little used, the usual wall-facings being *opus quadratum* of tufa or peperino, and *opus reticulatum* of tufa only. The *confessiones* or crypts in front of the high altars of St Peter's, S. Maria Maggiore, S. Pietro in Vincoli, and other churches in Rome are museums of the rarer and more splendid marbles used by the ancient Romans, as their walls and pavements are covered with the richest specimens found during excavations. All the fine marbles in Roman churches have been taken from ancient buildings; an excellent account of these is given by Corsi, *Pietre antiche*, 1845.

small cornices and other mouldings in interiors of buildings. Its quarries in Greece are still worked. (The largest pieces known are the fourteen steps to the high altar of S. Prassede and two columns nearly 12 feet high in the Rospigliosi Casino dell' Aurora.) (7) *Nero antico* is probably the ancient *marmor Tænarium*, from Cape Tænarus in Sparta. It is mentioned by Tibullus (iii. 3, 14) in conjunction with Phrygian and Carystian marbles; see also Prop., iii. 2, and Plin., *H.N.*, xxxvi. 43. (Ex., two columns in the choir of the church of Ara Coeli.) (8) *Lapis Atracius (verde antico)*, found at Atrax in Thessaly (Liv., xxxii. 15), was one of the favourite materials for decorative architecture; it is not strictly a marble (*i.e.*, a calcareous stone) but a variety of "precious serpentine," with patches of white and brown on a brilliant green ground. It seldom occurs in large masses. (The finest known specimens are the twenty-four columns beside the niches in the nave of the Lateran basilica.) (9) The hard Oriental alabaster, the "onyx" or "alabastrites" of Pliny (*H.N.*, xxxvi. 12, xxxvii. 32); its chief quarries were on the Nile near Thebes,¹ in Arabia, and near Damascus. In Pliny's age it was a great rarity; but in later times it was introduced in large quantities, and fragments of a great many columns have been found on the Palatine, in the baths of Caracalla, and elsewhere. It is semi-transparent, and beautifully marked with concentric nodules and wavy strata. An immense number of other less common marbles have been found, including many varieties of breccia, but their ancient names are unknown.

Granites
and
basalts.

From the latter part of the 1st century B.C. hard stones—granites and basalts—were introduced in great quantities. The basalts—"basanites" of Pliny (xxxvi. 11)—are very refractory, and can only be worked by the help of emery or diamond dust. The former was obtained largely at Naxos; diamond-dust drills are mentioned by Pliny (*H.N.*, xxxvii. 76). The basalts are black, green, and brown, and are usually free from spots or markings; examples of all three exist, but are comparatively rare. The red variety called "porphyry" was used in enormous quantities. It is the "porphyrites" of Pliny (*H.N.*, xxxvi. 11), and was brought from Egypt. It has a rich red ground, covered with small specks of white felspar; hence it was also called "leptosephos." A large number of columns of it exist, and it was much used for pavements of *opus Alexandrinum*. A rich green porphyry or basalt was also largely used, but not in such great masses as the red porphyry. It has a brilliant green ground covered with rectangular light green crystals of felspar. This is the *lapis Lacedæmonius* (wrongly called by the modern Romans "serpentino"), so named from its quarries in Mount Taygetus in Lacedæmonia (Paus., *Lac.*, iii. and viii.; Plin., *H.N.*, xxxvi. 11; Juv., xi. 173). It appears to have been mostly used for pavements and panels of wall linings. The granites used in Rome came mostly from near Philæ on the Nile (Plin., *H.N.*, xxxvi. 13). The red sort was called *lapis pyrrhopæcilus* and the grey *lapis psaronius*. The columns in the Basilica Ulpia are a fine example of the latter; both sorts are used for the columns of the Pantheon and those of the temple of Saturn in the Forum. Gigantic ships were specially made to carry the obelisks and other great monoliths (Plin., *H.N.*, xxxvi. 1, 14).

Architectural
styles.

The style of architecture employed in ancient Rome may be said to have passed through three stages,—the Etruscan, the Greek, and the Roman. During the first few centuries of the existence of the city, both the methods of construction and the designs employed appear to have been purely Etruscan. The earliest temples were either simple cellæ without columns, as we see on the Palatine by the *Scalæ Caci*, or else, in the case of the grander temples, such as that of Capitoline Jupiter, the columns were very widely spaced (*arcostyle*), and consequently had entablatures of wooden beams. The architectural decorations were more generally in gilt bronze or painted terra-cotta than in stone, and the paintings or statues which decorated the buildings were usually the work of Etruscan artists.² The Greek influence is more obvious; almost all the temples of the earlier imperial age are Greek, with certain modifications, not only in general design but in details and ornaments. Greek architects were largely employed; and Roman architects such as Vitruvius and C. Mutius in the 1st century B.C., Severus and Celer under Nero, and Rabirius under Domitian were Greek by education, and probably studied at Athens (see Vit., vii., *Præf.*; Hirt, *Gesch. d. Baukunst*, ii. p. 257; Burn, *Rome*, p. 76).³ The Romans, however, though quite devoid of artistic originality, were

very able engineers, and this led to the development of a new and more purely Roman style, in which the restrictions imposed by the use of the stone lintel were put aside and large spaces were covered with vaults and domes cast in semifluid concrete, a method which had the enormous advantage of giving the arched form without the constant thrust at the springing which makes true arches or vaults of wide span so difficult to deal with. The enormous vaults of the great thermæ, the basilica of Constantine, and the like cover their spaces with one solid mass like a metal lid, giving the form but not the principle of the arch, and thus allowing the vault to be set on walls which would at once have been thrust apart had they been subjected to the immense leverage which a true arched vault constantly exerts on its imposts.⁴ This is a very important point, and one which is usually overlooked, mainly owing to the Roman practice of facing their concrete with bricks, which (from an examination of the surface only) appear to be a principal item in the construction. The walls of the Pantheon, for example, are covered with tiers of brick arches, and many theories have been invented as to their use in distributing the weight of the walls. But a recognition of the fact that these walls are of concrete about 20 feet thick, while the brick facing averages scarcely 6 inches in thickness, clearly shows that these "relieving arches" have no more constructional use as far as concerns the pressure than if they were painted on the surface of the walls. Exactly the same reasons apply to the superficial use of brick in all arches and vaults.

At first tufa only was used in *opus quadratum*, as we see in the Opus so-called wall of Romulus. Next the harder peperino began to be quadratum: it is used, though sparingly, in the great Servian wall, and during the later republic appears to have been largely employed for exterior walls or points where there was heavy pressure, while other parts were built of tufa. Thirdly, travertine appears to have been introduced about the 2d century B.C., but was used at first for merely ornamental purposes, very much as marble was under the empire; after about the middle of the 1st century A.D. travertine began to be largely used for the solid mass of walls, as in the temple of Vespasian and the Colosseum. The tufa or peperino blocks were roughly 2 (Roman) feet thick in regular courses, *isodorum*, by 2 feet across the end, and under the republic often exactly 4 feet long, so that two blocks set endways ranged with one set lengthways. They were then arranged in alternate courses of headers and stretchers, so as to make a good bond; this is the "emplecton" of Vitruvius (ii. 8). The so-called Tabularium of the Capitol is a good example of this (see fig. 1). The harder and more valuable travertine was not out in this regular way, but pieces of all sizes were used, just as they happened to come from the quarry, in order to avoid waste: blocks

FIG. 1.—Example of *opus quadratum*, 78 B.C. Arch at foot of the stairs of the Tabularium (see Plate VII.). The flat arch C is of travertine, the rest of peperino. A. Footing-course of rough stones. B. Concrete foundation, exposed by the lowering of the paving when the temple of Vespasian was built.

as much as 15 by 8 feet were used, and the courses varied in thickness—the "pseudisodorum" of Vitruvius. When tufa or peperino was mixed with the travertine, it was cut so as to range with the irregular courses of the latter.

It is an interesting point to note the manner in which the Roman builders mixed their different materials according to the weight they had to carry. While tufa was frequently used for the main walls, peperino (*e.g.*, in the Servian wall on the Aventine) or travertine (*e.g.*, in the forum of Augustus and the temple of Fortuna Virilis, so called) was inserted at points of special pressure, such as piers or arches (see fig. 21 below). The Colosseum is a particularly elaborate example of this mixed construction with three degrees of pressure supported by three different materials (see fig. 2).

⁴ In the beautiful drawings of Choisy (*L'Art de bâtir chez les Romains*, Paris, 1878) the structural importance of the brick used in vaults and arches is very much exaggerated.

¹ These Nile quarries have been worked during the present century, and many blocks were imported into Rome for the rebuilding of S. Paolo fuori le Mura.

² Pliny (*H.N.*, xxxv. 45), quoting Varro, says that the decorations in painting and sculpture of the temple of Ceres near the Circus Maximus (now S. Maria in Cosmedin) were the work of the first Greek artists employed in Rome, and that before that (c. 498 B.C.) "all things in temples were Etruscan." Vitruvius (iii. 8) says, "Ornamentum signis fictilibus aut aereis inauratis earum fastigium Tuscanico more, uti est ad Circum Maximum Cereris, et Herculis Pompeiani, item Capitolii" (comp. iv. 7, vi. 8).

³ The frequent use of engaged columns is a peculiarity of Roman architecture, but it is not without precedent in Greek buildings of the best period, *e.g.*, in the Lion-tomb at Onchus and the temple of Zeus at Agrigento. Surface enrichments over the mouldings were used far more largely by the Romans than by the Greeks.

Mortar. The use of mortar with opus quadratum is a sign of an early rather than a late date.¹ It occurs in the Servian wall on the

Aventine, in the Tabularium, and, most striking of all, in the Tullianum under the "Mamertine prison" — certainly one of the oldest buildings in Rome (see fig. 11). Under the empire massive blocks, whether of tufa, travertine, or marble, are set without any mortar. It must, however, be observed that in these early instances the "mortar" is but a thin stratum of lime, little thicker than stout paper, used not as a cement to bind the blocks together, but simply to give the joints a

Clamps.

smoothly fitting surface. The actual binding together was done by clamps and dowels, as well as by the mass and weight of the great blocks used. Except in the earliest masonry, each block was very carefully fastened, not only to the next blocks on the same course, which was done with double dove-tailed dowels of wood, but also to those above and below with stout iron clamps, run with lead (Vitruvius, ii. 8).² In more ornamental marble work bronze clamps were often used.

When concrete was employed it was faced either with blocks of opus quadratum (e.g., the Servian wall along the Aventine) or with opus incertum—small irregularly shaped blocks of tufa 3 to 6 inches across, with pointed ends driven into the concrete while it was soft, and worked smooth on the face only (see fig. 3). Thirdly, in the 1st century B.C. opus reticulatum,³ also of tufa, was largely used alone; after that it began to be mixed with brickwork. It is very neat in appearance, and is often fitted with great care, though it was generally covered with stucco. The so-called "house of Livia" on the Palatine is a good example of the earlier sort, when the quoins were made of small rectangular blocks of tufa.

The palace of Caligula has it with quoins of brick facing. Though in Rome opus reticulatum was always made of tufa, in the neighbourhood of the city it was sometimes of peperino or even lava, where these materials were found on the spot.

Opus reticulatum.

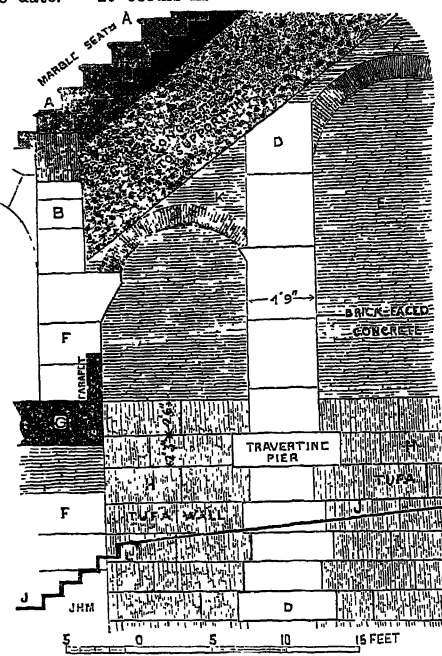

FIG. 2.—Example of construction in which many materials are used; upper part of one of the inner radiating walls under the cunei of the Colosseum. A, A. Marble seats on brick and concrete core, supported on vault made of pumice-stone concrete (C). B, Travertine arch at end of raking vault (C). D, One of the travertine piers built in flush with the tufa wall to give it extra strength. E, E. Wall of tufa concrete faced with triangular bricks, carrying the vaults of pumice concrete which support the marble seats. F, Travertine pier at end of radiating wall. G, Brick-faced arch of concrete to carry floor of passage. H, H. Tufa wall, opus quadratum. J, J, J. Line of steps in next bay. K, K. Surface arches of brick, too shallow to be of any constructional use, and not meant for ornament, as the whole was stuccoed; they only face the wall (which is about 4 feet thick) to the average depth of 4 inches.

FIG. 3.—Concrete wall faced with (A) opus incertum and (B) opus reticulatum. C shows the section, similar in both.

Of concrete walls faced with burnt bricks no dated example earlier than the middle of the 1st century B.C. is known. The facing, Pantheon (27 B.C.) is the most important early specimen of certain date. The bricks used are always triangular in shape, so as to present a large surface on the face with little expenditure of brick, and also to improve the bond with the concrete behind (see fig. 4). Even party walls of small rooms, only 7 inches thick, are not built solid, but have a concrete core faced with brick triangles about 3 inches long. Owing to this method of forming the walls it was necessary to support the facing until the concrete was set, which appears to have been done with a wooden framing covered with planks on the inside.

FIG. 4.—Section of concrete wall, showing the use of bricks merely as a facing.

In some cases the planks were nailed outside the wooden uprights, as was done with the unfaced concrete walls (see below), and then a series of perpendicular grooves appear in the face of the brickwork. Walls faced with opus reticulatum must have been supported temporarily in the same way.

The character of the brick facing is a great help towards determining the date of Roman buildings; it has been stated that this can be done simply by measuring the number of brick courses that go to a foot,—the more the bricks the earlier the work. This, however, is not the case. In early work the bricks are thick and the joints thin, while in later times the reverse is the case. Thus brickwork of the time of Severus and later usually has more bricks to the foot than that of the Flavian period. The following list gives a few characteristic specimens of different dates.

Building.	Average thickness of Bricks.	Average thickness of Joints.
	Inches.	Inches.
Rostra of Julius Caesar, 44 B.C.	1½	1 to 1½
Pantheon of Agrippa, 27 B.C.	1½	1 to 1½
Preterian camp of Tiberius, 23 A.D.	1½ to 1¾	1 to 1½
Aqueduct of Nero, c. 62 A.D.	1 to 1½	1 to 1½
Baths of Titus, c. 80 A.D.	1½	1 to 1½
Palace of Domitian, c. 90 A.D.	1½	1 to 1½
Hadrian's temple of Venus and Rome, c. 125 A.D.	1½	1 to 1½
Palace of Severus, c. 200 A.D.	1	1 to 1½
Aurelian's walls, c. 271 A.D.	1½ to 1¾	1½ to 1¾

The length of the bricks as it appears on the face is no guide to the date, owing to the fact that one or more of the sharp points of the brick triangles were very frequently broken off before they were used. Moreover, varieties both in quality of workmanship and size of the bricks often occur in work of the same date; a new gang of workmen or a batch of bricks from a fresh *figlina* might easily occasion this. In the remains of Nero's Golden House great varieties appear, and some of the walls in the interior rooms are faced with very irregular and careless brickwork.⁴ Special care and neatness were always employed in the rare cases when the wall was not to be covered with stucco, which in the absence of marble was usually spread over both inside and outside walls. All these circumstances make great caution necessary in judging of dates; fortunately after the 1st century A.D., and in some cases even earlier, stamps impressed on bricks, and especially on the large tiles used for arches, give clearer indications. The reason of the almost universal use of smooth facings either of opus reticulatum or of brick over concrete walls is a very puzzling question; for concrete itself forms an excellent ground for the stucco coating or backing to the marble slabs, while the stucco adheres with difficulty to a smooth facing, and is very liable to fall away. The modern practice of raking out the joints to form a key was not employed by the Romans, but before the mortar was hard they studded the face of the wall with marble plugs and iron or bronze nails driven into the joints, so as to give a hold for the stucco—a great waste both of labour and material.⁵ The quality of the mortar varies according to its date: during the 1st and 2d centuries it is of most remarkable hardness,—made of lime with a mixture of coarse pozzolana of a bright red colour; in the 3d century it began to be inferior in quality; and the pozzolana used under the later empire is brown instead of red.

Concrete was at first always made of lumps of tufa; then travertine, lava, broken bricks, and even marble were used, in fact all walls and the chips and fragments of the mason's yard. Under the empire vaults, the concrete used was of travertine or lava mostly for foundations, of tufa or broken bricks for walls, and of tufa or pumice-stone (for the sake of lightness) for vaults. Massive walls were cast in a

¹ Choisy (*L'Art de bâtir chez les Romains*, Paris, 1873) is mistaken in his denial of the early use of mortar by the Romans.

² The expansion of the iron through rust, which caused the stone to split, has frequently been a great source of injury to Roman walls, as well as the practice, common in the Middle Ages, of breaking into the stones in order to extract the metal.

³ These two kinds of stone facings are mentioned thus by Vitruvius (ii. 8), 'reticulatum, quo nunc [reign of Augustus] omnes utuntur, et antiquum, quod incertum dicitur.'

⁴ Some of the bricks are as much as 2½ inches thick, while 1½ inches is the usual maximum for Roman bricks.

⁵ The Roman method of applying stucco to walls with a wooden "float," exactly as is done now, is shown in a painting from Pompeii (see *Ann. Inst.*, 1881).

mould; upright timbers, about 6 by 7 inches thick and 10 to 14 feet long, were set in rows on each face of the future wall; planks 9 to 10 inches wide were nailed to them, so as to form two sides of a sort of box, into which the semi-fluid mass of stones, lime, and pozzolana was poured. When this was set the timbers were removed and refixed on the top of the concrete wall; then fresh concrete was poured in; and this process was repeated till the wall was raised to the required height. Usually such cast-work was only used for foundations and cellar walls, the upper parts being faced with brick; but in some cases the whole wall to the top was cast in this way and the brick facing omitted. In strength and durability no masonry, however hard the stone or large the blocks, could ever equal these walls of concrete when made with hard lava or travertine, for each wall was one perfectly coherent mass, and could only be destroyed by a laborious process like that of quarrying hard stone from its native bed. Owing to this method of forming the Roman buildings the progress of the work from day to day can often be traced by a change in the look of the concrete. About 3 feet high appears to have been the average amount of wall raised in a day.

Marble linings, clamps of metal, hooked at the end so as to hold in a hole made in the marble slab. Fig. 5 gives an example, of the time of Augustus, fixed against a stone wall. The quantity of rich marbles which, for at least three centuries, were being dug out in countless quarries in the East, by whole armies of workmen, and constantly poured into Rome is almost beyond calculation. Scarcely a church is without columns and wall-linings stolen from ancient buildings, and the more magnificent chapels, such as those of the Borghese, Corsini, and Cibo families, with the whole church of S. Maria della Vittoria, owe their splendour entirely to their wall-linings of ancient marbles, porphyry, and alabaster.¹ The blocks were usually marked in the quarry with a number, and often with the names of the reigning emperor and the overseer of the quarry. These quarry-marks are often of great value as indications of the date of a building or statue.² Metropolitan building Acts, not unlike those of modern London, were enacted by several of the emperors. These fixed the materials to be used, the thickness of walls, the minimum width of streets, the maximum height allowed for houses, and the like. After the great fire in Nero's reign, 64 A.D., an Act was passed requiring external walls to be faced with fire-proof materials, such as peperino or burnt brick; this Act was being prepared long before the fire,—strong evidence as to this being a wilful act on Nero's part, as is asserted by Suetonius (*Nero*, 38).

Enormous accumulations of statues and pictures enriched Rome during its period of greatest splendour. In the first place, the numerous statues of the republican and even of the regal period were religiously preserved at a time when, from their archaic character, they must have been regarded rather as objects of sacred or archaeological interest than as works of art (*Plin.*, *H.N.*, xxxiv. 9-16, xxxv. 7). Secondly came the large Græco-Roman class, mostly copies of earlier Greek works, executed in Rome by Greek artists. To this class belongs most of the finest existing sculpture preserved in the Vatican and other museums. Thirdly, countless statues and pictures were stolen from almost every important city in Greece, Magna Græcia, Sicily, and western Asia Minor. These robberies began early, and were carried on for many centuries. The importations included works of art by all the chief artists from the 5th century downwards. Long lists are given by Pliny (*H.N.*, xxxiii.-xxxvi.), and pedestals even now exist with the names of Praxiteles, Timarchus, Polykletus, Bryaxis, and others (see *Bull. Comm. Arch.*

¹ Yet for many centuries during the Middle Ages the richest sites of ancient Rome were riddled with lime-kilns, in which the greater part of the marble was destroyed; see Raphael's letter to Leo X. on this subject published by Visconti (Rome, 1834).

² See Bruzza, in *Ann. Inst.*, 1870, p. 106.

Rom., ii. p. 176). These accumulated works of sculpture were of all materials—gold and ivory (*Suet.*, *Tit.*, 2), of which seventy-four are mentioned in the catalogue of the Breviarium (see *Preller, Regionen*, p. 231), many hundreds or even thousands of silver³ (*Plin.*, *H.N.*, xxxiii. 54), while those of gilt bronze and marble must have existed in almost untold numbers (*Paus.*, viii. 46). Nor were the accumulated stores of Greek paintings much inferior in number; not only were easel pictures by Zeuxis, Apelles, Timanthes, and other Greek artists taken, but even mural paintings were carefully cut off their walls and brought to Rome secured in wooden frames (*Plin.*, *H.N.*, xxxv. 49, and compare *ibid.*, 45).

The basalt (*silex*) roads were made of polygonal blocks of lava Roads.

neatly fitted together and laid on a carefully prepared bed, similar to that used for mosaic paving (see MOSAIC and ROADS). Roads thus made were called "via strata." One portion only exists in Rome of early date, when the blocks were fitted together with the utmost accuracy viz., a piece of the Clivus Capitolinus in front of the temple of Saturn (see fig. 6, which also shows the massive travertine curb which bordered the road; in some cases the curb was of lava). The other best preserved via strata in Rome are those leading up to the Palatine from the Summa Sacra Via and that which follows

FIG. 6.—Example of early basalt road by the temple of Saturn on the Clivus Capitolinus. A. Travertine paving. B. Polygonal basalt blocks. C. Concrete bedding. D. Rain-water gutter. The curb shown is taken from another part of the road.

the curved line of shops in Trajan's forum. Many others exist, but have all been relaid in later times, with badly fitting joints.⁴

The following is a list of the chief roads which radiated from Rome (see Plate VII.):—(1) Via Appia and (2) Via Latina, both issued from the Servian Porta Capena, and both met at Beneventum; (3) Via Labicana, from the P. Esquilina, passing Labicum, joined the Via Latina 30 miles from Rome; (4) Via Gabina (later called Prænestina), also issued from the P. Esquilina and joined the Via Latina,—these two roads pass through the Claudian aqueduct gate (mod. Porta Maggiore); (5) Via Tiburtina, from the gate of that name to Tibur; (6) Via Nomentana, from the P. Collina, passing Nomentum, joined the Via Salaria; (7) Via Salaria, also from the P. Collina, joined the Via Flaminia at Ancona; (8) Via Flaminia, its first half-mile or so after leaving the Servian Porta Ratumena was known as the Via Lata; it afterwards passed out of the Aurelian P. Flaminia, and with many branches led to the chief towns of Northern Italy, and so into Cisalpine Gaul; (9) Via Aurelia, issued from the trans-Tiberine P. Aurelia and passed through Pisa to Gaul; (10) Via Portuensis, from the gate of that name, also on the right bank of the Tiber, to Portus Augusti near its mouth; (11) Via Ostiensis, from the Servian P. Trigemina and the Aurelian P. Ostiensis to Ostia; (12) Via Ardeatina, probably a branch from the Via Appia, led to Ardea.

Remains of Prehistoric Rome.

It is evident from recent discoveries that the site of Rome was Plate VII populous at a very remote period. Flint implements and remains Archaic of the early Bronze Age have been found on the Aventine and in pottery. other places;⁵ and in 1874, near the arch of Gallienus on the Esquiline, the important discovery was made of a necropolis⁶ apparently of considerable extent, the tombs of which and their contents—Attic vases and other objects—were of Phœnician and Etruscan character, dating probably about the time of the traditional founding of Rome. In February 1883 a number of very early cist tombs, formed by two slabs of stone set on edge with a third for the lid, were found during excavations on the Esquiline between the Piazza Vitt. Emmanuele and the Via di Napoleone

³ Eighty silver statues of Augustus, some equestrian and some in quadriga, are mentioned in the *Mon. Ancyr.* See p. 822 below.

⁴ See Nibby, *Vie degli Antichi*, in Nardini, vol. iv. 1820; also Livy, x. 23, xl. 51, xli. 27.

⁵ Under the Servian wall on the Esquiline has been found pottery of that very primitive sort which is ornamented only with rudely incised lines, zig-zags, hatchings, and dots, similar to that found under a stratum of peperino rock at Alba Longa.

⁶ See "Necrop. dell. Esquilino," in *Ann. Inst.*, 1882, p. 5 sq., and *Mon. Inst.*, xl. pl. xxxvii.; also *Bull. Comm. Arch.*, iii.

III.¹ Some of the pottery found in the Esquiline necropolis was of that rare kind which is coated with white and coloured stanniferous enamels, examples of which have been found in Ægina and at Camirus in Rhodes,—a method of decoration which is not Hellenic, but was common in Assyria and Egypt.² Some of the Esquiline tombs also contained terra-cotta reliefs of Oriental character, covered with plumbo-vitreous glaze, coloured brilliant blues and greens, like the little figures so commonly found in Egypt. Some dim traditions of these earlier inhabitants certainly existed among the Romans: Dion Cassius (iii. 5), to account for the existence of a city on the Palatine earlier than the traditional Roma Quadrata, invents an earlier Romulus and Remus to be its founders.³

The most important existing relics of the time when Roman history first begins, though dimly, to take a definite shape are the so-called "wall of Romulus," forming the circuit of the famous Roma Quadrata of the Palatine. Unfortunately the accounts of the extent of the Pomerium (*Postmerium*) or sacred enclosure give but little help towards defining its circuit. Even its precise nature is a matter of doubt, in spite of the accounts of it given by Varro (*L.L.*, v. 143), Livy (i. 44), and Dionysius (i. 88), as is usually the case with descriptions in ancient writers of what was in their time purely an archaeological matter. It is, however, certain that the Pomerium in some way or other followed the circuit of the primitive city, called from its shape Roma Quadrata.⁴ Its boundaries are given thus by Tacitus (*Ann.*, xii. 24): starting from the Forum Boarium at the west corner of the Palatine, it goes to the Ara Maxima (see *Ann. Inst.*, 1854, p. 28) and the Ara Consi, both probably in the Vallis Murcia, afterwards occupied by the Circus Maximus; but the exact positions of these points are unknown.⁵ The next stages are the Curia Veteres, the Sacellum Larum, and lastly the Forum Romanum. Unfortunately the known points in this description, namely the two fora, are precisely those which mark that part of the circuit known from existing remains of the walls. It is therefore to the scanty relics of the wall which still exist on the other sides that we must turn to determine the extent of Roma Quadrata. These enable us to fix its line along the whole valley of the Velabrum, on the west of the hill, and along the valley of the Circus Maximus as far as the so-called Domus Gelotiana, about half-way on the south side (see fig. 17). The doubtful point has been whether the line of the wall from north to south included the whole extent of the hill, or passed across it, along the line of that deep natural valley which once divided the Palatine into two parts, and was in later times filled up and built upon by Domitian in the construction of his great palace. Recent excavations have, however, disclosed at several points the existence of this ancient wall extending along the south-eastern part of the Palatine; moreover, there is strong evidence as to Roma Quadrata being co-extensive with the whole hill from Cicero, *De Rep.*, ii. 6, and Aul. Gell., xiii. 14. Traces of the wall have been found running eastwards from the Porta Mugonia, and that piece of wall by the Domus Gelotiana which starts to run northwards across the middle of the hill has been found to be merely a projecting spur, which again turns eastwards, so as to include apparently the rest of the Palatine where the palace of Severus now stands.

The most perfect remains of the Romulean wall are those near the west angle of the hill (see fig. 7). These show that the fortifications of Roma Quadrata were formed in the usual manner of Etruscan cities, in which the natural strength given by cliffs was increased by artificial means. The wall was set neither at the top nor at the foot of the hill, but more than half-way up, a level terrace or shelf all round being cut in the rock on which the base of the wall stood. Above that the hill was cut away into a cliff, not quite perpendicular but slightly "battering" inwards, to give greater stability to the wall, which was built up against it, like a retaining wall, reaching to the top of the cliff, and probably a few feet higher. The stones used in this wall are soft tufa, a warm brown in colour, and full of masses of charred wood. The cutting to form the steep cliff probably supplied part of the material for the wall; and ancient quarries, afterwards used as reservoirs for water, exist in the mass of rock on which the so-called temple of Jupiter Victor stands. It has been asserted that these tufa blocks are not cut but split with wedges; this, however, is not the case. Tufa does not split into rectangular masses, but would be shattered to pieces by a wedge; moreover, distinct tool-marks can be seen on all the blocks whose surface is well preserved and in the quarries

themselves. Chisels from one-fourth to three-fourths of an inch in width were used, and also a sharp-pointed pick or hammer. The wall is about 10 feet thick at the bottom, and increases in thickness above as the scarped cliff against which it is built recedes. It is built of blocks laid in alternate courses of headers and stretchers, varying in thickness from 22 to 24 inches, in length from 3 to 5 feet, and in width from 19 to 22 inches. These blocks are carefully worked on their beds, but the face is left rough, and the vertical joints are in some cases open, spaces of nearly 2 inches being left between block and block; in other cases the vertical joints are worked true and close like the beds. The open vertical joints are peculiar to the masonry of this early period; in the wall of Servius they always fit closely, at least on the visible face of the wall. No mortar was used. At two points on the side of the Velabrum (see 8 and 9 on the plan of the Palatine, fig. 17) winding passages are excavated in the tufa cliff, the entrance to which was once closed by the

Fig. 7.—Section of primitive wall of Roma Quadrata. A. Original height of wall. B. Upper part of cliff, now crumbled away. C. Cistern cut in the tufa rock. D. Levelled platform to receive base of wall. E, E. Cliff made steeper by cutting. ancient wall. One of these (No. 8) in early times (before water in abundance was brought to the Palatine on aqueducts) was used as a reservoir to collect surface water, probably for use in case of siege; circular shafts for buckets are cut downwards through the rock from the top of the hill; fig. 7 shows it in section. An exactly similar rock-cut cistern with vertical shafts, of very early date, exists at Alba Longa. Opposite the church of S. Teodoro a series of buttresses belonging to the wall of Romulus exists, partly concealed by a long line of buildings of the later years of the republic and the early empire, to make room for which the greater part of the then useless wall was pulled down, and only fragments left here and there, where they could be worked into the walls of the later houses.

Three accesses only to the ancient city can now be traced. One Gate of is the so-called *Scalæ Caci*, a long sloping ascent cut through the Roma rock (see fig. 17) from the side of the Circus Maximus; some Quadrata remains of the earliest wall still exist along the sides of this steep ascent or staircase. The upper part of this has remains of a basalt pavement, added in later times, probably covering the more ancient rock-cut steps. The name of the gate which led at this point into Roma Quadrata is unknown. The only two gates whose name and position can be (with any degree of probability) identified are the Porta Romanula and the Porta Mugionis (Plin., *H.N.*, iii. 5, 9). The former of these, called *Porta Romana* by Festus (ed. Muller, p. 262), was at the foot of the *Clivus Victorie* (see fig. 17), at the angle next the Forum Romanum.⁶ According to Festus it was so called by the Sabines of the Capitol because it was their natural entrance to Roma Quadrata (see also Varro, *L.L.*, v. 164, vi. 24). The original approach to it was by a road running up the lower extra-mural part of the hill from the direction of the Velabrum. In later times a more direct ascent to it was made from the Forum by a flight of steps, probably the *Scalæ Anularie* of Suetonius (*Aug.*, 72; see figs. 16 and 17 and plan of the Forum, Plate VIII.). The lower part of these stairs, now buried under S. Maria Liberatrice, is shown in the marble plan of Rome; the upper part, that from the Nova Via to the *Clivus Victorie*, still exists, and has recently been exposed. Traces of the *Porta Mugionis* or *Mugonia* (see Sol., i. 24) have been discovered near the temple of Jupiter Stator, where a basalt paved road leads up into the Palatine from the Summa Sacra Via and the Summa Nova Via, which join near the arch of Titus; exposure to weather has now destroyed the soft tufa blocks of which this gate was built. This is probably the "*veterem portam Palatii*" of Livy (i. 12) through which the Romans fled when defeated by the Sabines. A third entrance,⁷ according to the ancient Etruscan rule (see Servius, *Ad Æn.*, i. 422), probably existed on the east side of the hill, but its site is uncertain. Judging from the shape of the hill, it may very possibly have been under the existing palace of Severus, where a road leads from the stadium

⁵ The Ara Maxima of Hercules was probably near the carceres or starting end of the circus (Dionys., i. 40). The Ara Consi (Equestrian Neptune) gave its name to the Consualia, games in honour of this deity held by Romulus, at which the celebrated capture of the Sabine women took place. In later times this altar existed on or below the spina of the circus, apparently near the meta at the opposite end to the carceres; it was usually hidden from sight, but during the Ludi Circenses was uncovered and exposed to view (see Plut., *Rom.*, 14; Varro, *L.L.*, vi. 20; Tertull., *De Spec.*, v. 8).

⁶ The present entrance to Caligula's palace is probably exactly on the site of the ancient *Porta Romana*.

⁷ The stairs of Cacus, being only an access for men on foot, would not be counted as one of the three necessary gates which existed in every Etruscan city, and were dedicated to Jupiter, Juno, and Minerva.

down to the valley of the Coelian; at other places the east side is precipitous. The buildings of the emperors have, however, made such radical changes in the form of the ground that any degree of certainty on this point is impossible. This third gate, according to Varro, who mentions (*L. L.*, v. 164-5) all three, was called Janualis.¹ With regard to the last gate there is some doubt whether he is right in its position; Macrobius (*Satur.*, i. 9) places it on the slopes of the Viminal.²

Remains of Period of Kings (753-509 B.C.).

The most important remains of the regal period are the great wall, principally the work of Servius Tullius, by which he included within one circuit the separately fortified hills which were then inhabited,—the Palatine, Capitoline, Aventine, Quirinal, and Coelian, and added two more, the Esquiline and Viminal. These seven hills formed the Septimontium³ (Varro, *L. L.*, iv. 41, vi. 24). Of even earlier date was the fort (Liv., i. 33) on the top of the Janiculum, connected by walls with the Pons Sublicius, some massive foundations of which still exist, though now buried near the church of S. Pietro in Montorio. Existing remains show that the great wall is of more than one date; part is probably earlier than Servius, and may be remains of the wall which, according to Livy (i. 36, 38) and Dionysius (iii. 37), was planned and in part carried out by Tarquinius Priscus; it would seem impossible that a work of such gigantic magnitude could have been begun and completed in the lifetime of one man. It should, however, be remembered that a complete circuit of new wall was not required in this undertaking; each, probably, of the five hills first inhabited had its own fortifications, and these were utilized in the line of the new wall. The space thus included was divided by Servius for political, military, and religious purposes into four regiones (Varro, *L. L.*, v. 46-54)—(1) the Suburana, including the Coelian, and probably most of its adjacent valleys, with the Subura, the Carinae, and part of the Esquiline—the derivation of Suburana from *sub urbe* is from Junius, quoted by Varro; (2) Esquiline, the main part of the Esquiline, including the Oppius and Cispius (es-quil-ia, dwellings outside, cf. in-quil-inus); (3) Collina, the Viminal and Quirinal, which were called “colles” in contradistinction to the other five hills, which were called “montes”; (4) Palatina, the Palatine and its adjacent spurs, the Velia and Germalus. It will be observed that these four regiones do not include the Aventine, the Capitol, and some of their adjacent valleys,—an omission for which it is not easy to account.⁴

Line of
Servian
wall.

Excavations of the last fifteen years have done much to determine the line of the Servian wall (see Plate VII.), especially the great works undertaken in laying out a new quarter of the city on the Quirinal, Esquiline, and Viminal, which have laid bare and then mostly destroyed long lines of wall, especially along the agger. Beginning from the Tiber, which the Servian wall touched at a point near the present Ponte Rotto, and separating the Forum Olitorium (outside) from the Forum Boarium (inside), it ran in a straight line to the Capitoline Hill, the two crests of which, the Capitolium and the Arx, with the intermediate valley the Asylum, were surrounded by an earlier fortification, set (Dionys., ix. 68) ἐν λόφοις . . . καὶ πέτραις ἀνόρθουσι. In this short space there were three gates,—(1) the Porta Flumentana next the river (see Cic., *Ad Att.*, vii. 3; Liv., xxxv. 19, 21); (2) Porta Triumphalis, site unknown and usually only mentioned in connexion with triumphal processions (see Cic., *In Pis.*, 23; Joseph., *Bell. Jud.*, vii. 5, 4),—it was probably not used except on the occasion of triumphs; (3) Porta Carmentalis, close to the Capitolium.⁵ From the Capitoline Hill the wall passed to the Quirinal along a spur of elevated ground, afterwards completely cut away by Trajan. Close to the Capitol was the gate afterwards called the Porta Ratumena, whence issued the Via Lata (Plut., *In Publ.*, 13; Plin., *H. N.*, viii. 42). Remains of the wall and foundations of the gate exist in Via di Marforio, Nos. 81 C and 81 E. After passing Trajan's forum, the first remains of the walls are on the slope of the Quirinal in the Colonna gardens. Near the foot of the Quirinal was the Porta Fontinalis (Liv., xxxv. 10). A piece of the wall has been exposed in the new Via Nazionale, and also an archway under the Palazzo Antonelli, which has been thought to be the Porta Fontinalis. This arch is, however, only 6 feet 6 inches wide and (to the springing of the arch) 5 feet high, which seems too small for one of the principal gates. The Porta Sanqualis (see Festus, ed. Müller, p. 345) was also on the Quirinal, probably on the slope between the Trevi fountain and the royal palace. Its position is indicated by the

existence of some tombs which give the line of the road. On the north-west of the Quirinal was the Porta Salutaris (Festus, p. 327; Liv., ix. 43), probably near the “Quattro Fontane.” In the Barberini palace gardens, and especially in those of the Villa Barberini (Horti Sallustiani), extensive remains of the wall have been recently exposed and destroyed,—which was also the fate of that fine piece of wall that passed under the new office of finance, with the Porta Collina, which was not on the line of the present road, but about 50 yards to the south (see Dionys., ix. 68; Strabo, v. 3). Thus far in its course from the Capitol the wall skirted the slopes of hills, which were once much more abrupt than they are now; but from the Porta Collina to the Porta Esquilina it crossed a large tract of level ground; and here, by the construction of his great agger, Servius gained the strength which elsewhere was given by the natural formation of the hills. The whole line of this agger has been recently traced and mostly destroyed. About the middle of it the Porta Viminalis was found in 1872; it stood, as Strabo says, ἐν τῷ μέσῳ τῆς χῆμας, and from it led a road which passed through the Porta Chiusa (ancient name unknown) in Aurelian's wall. Foundations of the Porta Esquilina were found in 1876 close behind the arch of Gallienus. The further course of the wall across the valley of the Colosseum, with its Porta Querquetulana and Porta Coelimoniana, probably a little beyond, is the least known part of the circuit. Hence the wall skirts the slopes of the Coelian to the valley along which the Via Appia passed through the Porta Capena, near the church of S. Gregorio. Its line along the Aventine is fairly distinct, and near S. Balbina and in the Vigna Torlonia are two of the best-preserved pieces,—the former 11 courses high (22 feet), the latter 25 (50 feet). Under the Aventine it appears to have touched the river near the existing foundations supposed to be those of the Pons Sublicius. The Porta Trigemina was close by the bank. Hence to our starting-point the river formed the defence of the city, with its massive quay wall,—the κἀλη ἄκρη of Plutarch (*Rom.*, 20). A fragmentary passage of Varro (*L. L.*, v. 163) mentions two other gates, Nævica and Rauduscula, “the bronze gate,” but their positions are unknown. The site of the Porta Navalis is also very doubtful; it was probably not in the Servian wall.

The wall is built of blocks of tufa, usually the softer kinds, but its varying according to its position, as in most cases the stone used was that quarried on the spot. In some places a good deal of tuffaceous peperino is used. The blocks average from 23 to 24 inches in thickness—roughly 2 Roman feet—and are laid in alternate courses of headers and stretchers. The best preserved piece of wall—that on the Aventine in the Vigna Torlonia—has one complete arch and the starting of another; their sills are about 34 feet from the ground outside, and probably level with the ground inside (see fig. 8).

FIG. 8.—Part of Servian wall on Aventine.

These arches, though built of the harder stone, are not later insertions, but are contemporary with the wall itself. The blocks, both beds and vertical joints, are very carefully worked and set in mortar; in most cases they are bevelled round the joints. Some blocks are of great length,—ἀνδρείοι λίθοι Dionysius calls them. At this place the wall is backed with a thick mass of concrete; the use of the arched openings is doubtful: they may have been embrasures for catapults. The discoveries of recent years have shown the correctness of the description given by Dionysius (ix. 68) of the great Servian agger, with its wall and foss, begun by the earlier kings and completed by the last Tarquin. Fig. 9 shows it in section; the earth taken from the foss (which was 100 feet wide at the bottom by 30 deep) was heaped up to form the agger, and was kept in its position by a lofty retaining wall on the front and a lower one behind. The outer wall was in places strengthened with massive buttresses closely set, or with towers; in other places it had no projections. The back wall, the position of which shows the thickness of the

¹ See Dionys., ii. 65; Plut., *Rom.*, ix.; Dion Cass., various fragments; Liv., i. 7, 9; Sol., i. 17; Festus (ed. Müller), pp. 258, 262.

² See Becker, *De Muris et Portis Romae*, Leipzig, 1842; also “La fondazione di Roma,” in *Bull. Comm. Arch.*, ix., 1881.

³ At an early date the term “Septimontium” had a different meaning (see Plut., *Quaes. Rom.*, 69; Burn, *Rome*, p. 37).

⁴ Becker suggests (*Handbuch*, i. 386) that the Capitoline Hill was excluded on account of its sacred character, while the Aventine was not yet thickly populated, and the Janiculum was only occupied by the fort; see also *Ann. Inst.*, 1861, p. 61.

⁵ See Sol., i. 13; Liv., ii. 49, xxiv. 47, xxv. 7; Ascon., *Ad Cic. in Toga*, p. 90, Orell.

agger, is in parts about 33 feet from the front one, but it varies in this respect; in other parts the agger appears to have been more

FIG. 9.—Section and plan (double scale) of wall and agger of Servius. A. A. Undisturbed earth of fossa. B. Earth heaped up to form the agger. C. Road at brink of fossa. D. Wall and buttress. E. Back retaining wall of agger. F. Level to which the fossa was filled up and built upon under the empire.

than 50 feet thick. Between the railway station and the Dogana a fine lofty piece of the front wall remains, with traces of the Porta Viminalis and of the lower back wall. Unfortunately the whole of the bank or agger proper has been removed, and the rough back of the great retaining wall exposed. Both tufa and peperino are used; the blocks vary in length, but average in depth the usual 2 Roman feet. The railway cutting which has destroyed a great part of the agger showed clearly the section of the whole work: the strata of different kinds of soil which appeared on the sides of the foss appeared again in the agger, but reversed as they naturally would be in the process of digging out and heaping up. Dionysius (ix. 68) states the length of the agger to have been 7 stadia—that is, about 1400 yards—which agrees (roughly speaking) with the actual discoveries. Originally one road ran along the bottom of the foss and another along its edge; the latter existed in imperial times. But the whole foss appears to have been filled up, probably in the time of Augustus, and afterwards built upon; houses of mixed brick and opus reticulatum still exist against the outside of the great wall, which was itself used as the back wall of these houses, so that we now see painted stucco of the time of Hadrian covering parts of the wall of the kings. Another row of houses seems to have faced the road mentioned above as running along the upper edge of the foss, thus forming a long street. As early as the time of Augustus a very large part of the wall of the kings had been pulled down and built over, so that even then its circuit was difficult to trace (Dionys., iv. 13). A very curious series of

Masons' marks.

FIG. 10.—Masons' marks on walls of the regal period.

Of that wonderful system of massive arched sewers⁴ by which, as Dionysius (iii. 68) says, every street of Rome was drained into the Tiber considerable remains exist, especially of the Cloaca Maxima, which runs from the valley of the Subura, under the Forum (see Plate VIII.), along the Velabrum, and so into the Tiber by the

Cloacæ.

round temple in the Forum Boarium; it is still in use, and well preserved at most places. Its mouth, an archway in the great quay wall (καλή ἀκτὴ) nearly 11 feet wide by 12 high, consists of three rings of peperino "voussoirs," most neatly fitted. The rest of the vault and walls is built of mixed tufa and peperino.⁵ Pliny (H.N., xxxvi. 24) gives an interesting account of what is probably this great sewer, big enough (he says) for a loaded hay-cart to pass along. The mouths of two other similar but smaller cloacæ are still visible in the great quay wall near the Cloaca Maxima, and a whole network of sewers exists under a great part of the Servian city. Some of these are not built with arched vaults, but have triangular tops formed of courses of stone on level beds, each projecting over the one below,—a very primitive method of construction, employed in the Tullianum (see fig. 11). The great quay wall of tufa and peperino which lined both banks of the Tiber for a considerable distance also belongs to the regal period, and was a wall of great solidity and strength; it is now mostly destroyed by the action of the river. In later times this massive wall was extended, as the city grew, all along the bank of the Campus Martius, and, having lost its importance as a line of defence, had frequent flights of stairs built against it, descending to the river. Some of these are shown in one of the fragments of the marble plan (see Jordan, *For. Ur. Rom.*; *Frag.* 169). In 1879 a travertine block was dredged up inscribed P. BARRONIVS. BARBA. AED. CVR. GRADOS. REFECTI, dating from the 1st century A.D. This records the repair of one of these numerous river stairs. The name "pulchrum litus" is not a classical term, but simply a translation of Plutarch's καλή ἀκτὴ.⁶

The Tullianum is probably, next to the remains of Roma Quad-Tullianum and carcer.

It is partly cut in the tufa rock of the Capitoline Hill and partly built of 2-feet blocks of tufa, set with thin beds of pure lime mortar, in courses projecting one over the other (see fig. 11). Its name is probably derived, not from Servius Tullius, as Varro (v. 151) asserts, but from an early Latin word, *tullius*, a spring of water; its original use was probably that of a cistern or well. It was closed by a conical vault, arched in shape, but not constructionally, an arch,—very like the so-called "tomb of Agamemnon" at Mycenæ, and many early Etruscan tombs. When the upper room with its arched vault, also of tufa, was built the upper part of the cone seems to have been removed, and a flat stone floor (a flat arch in construction) substituted. This cannot be other than the "carcer . . . media urbe imminens foro" of Livy (i. 33), who speaks also (xxxiv. 44) of an "inferiorem carcerem," and at xxix. 22 of a criminal being put in the Tullianum. That its use as a cistern was abandoned is shown by the cloaca which leads from it, through the rock, to a branch of the Cloaca Maxima. This horrible place was used as a dun-

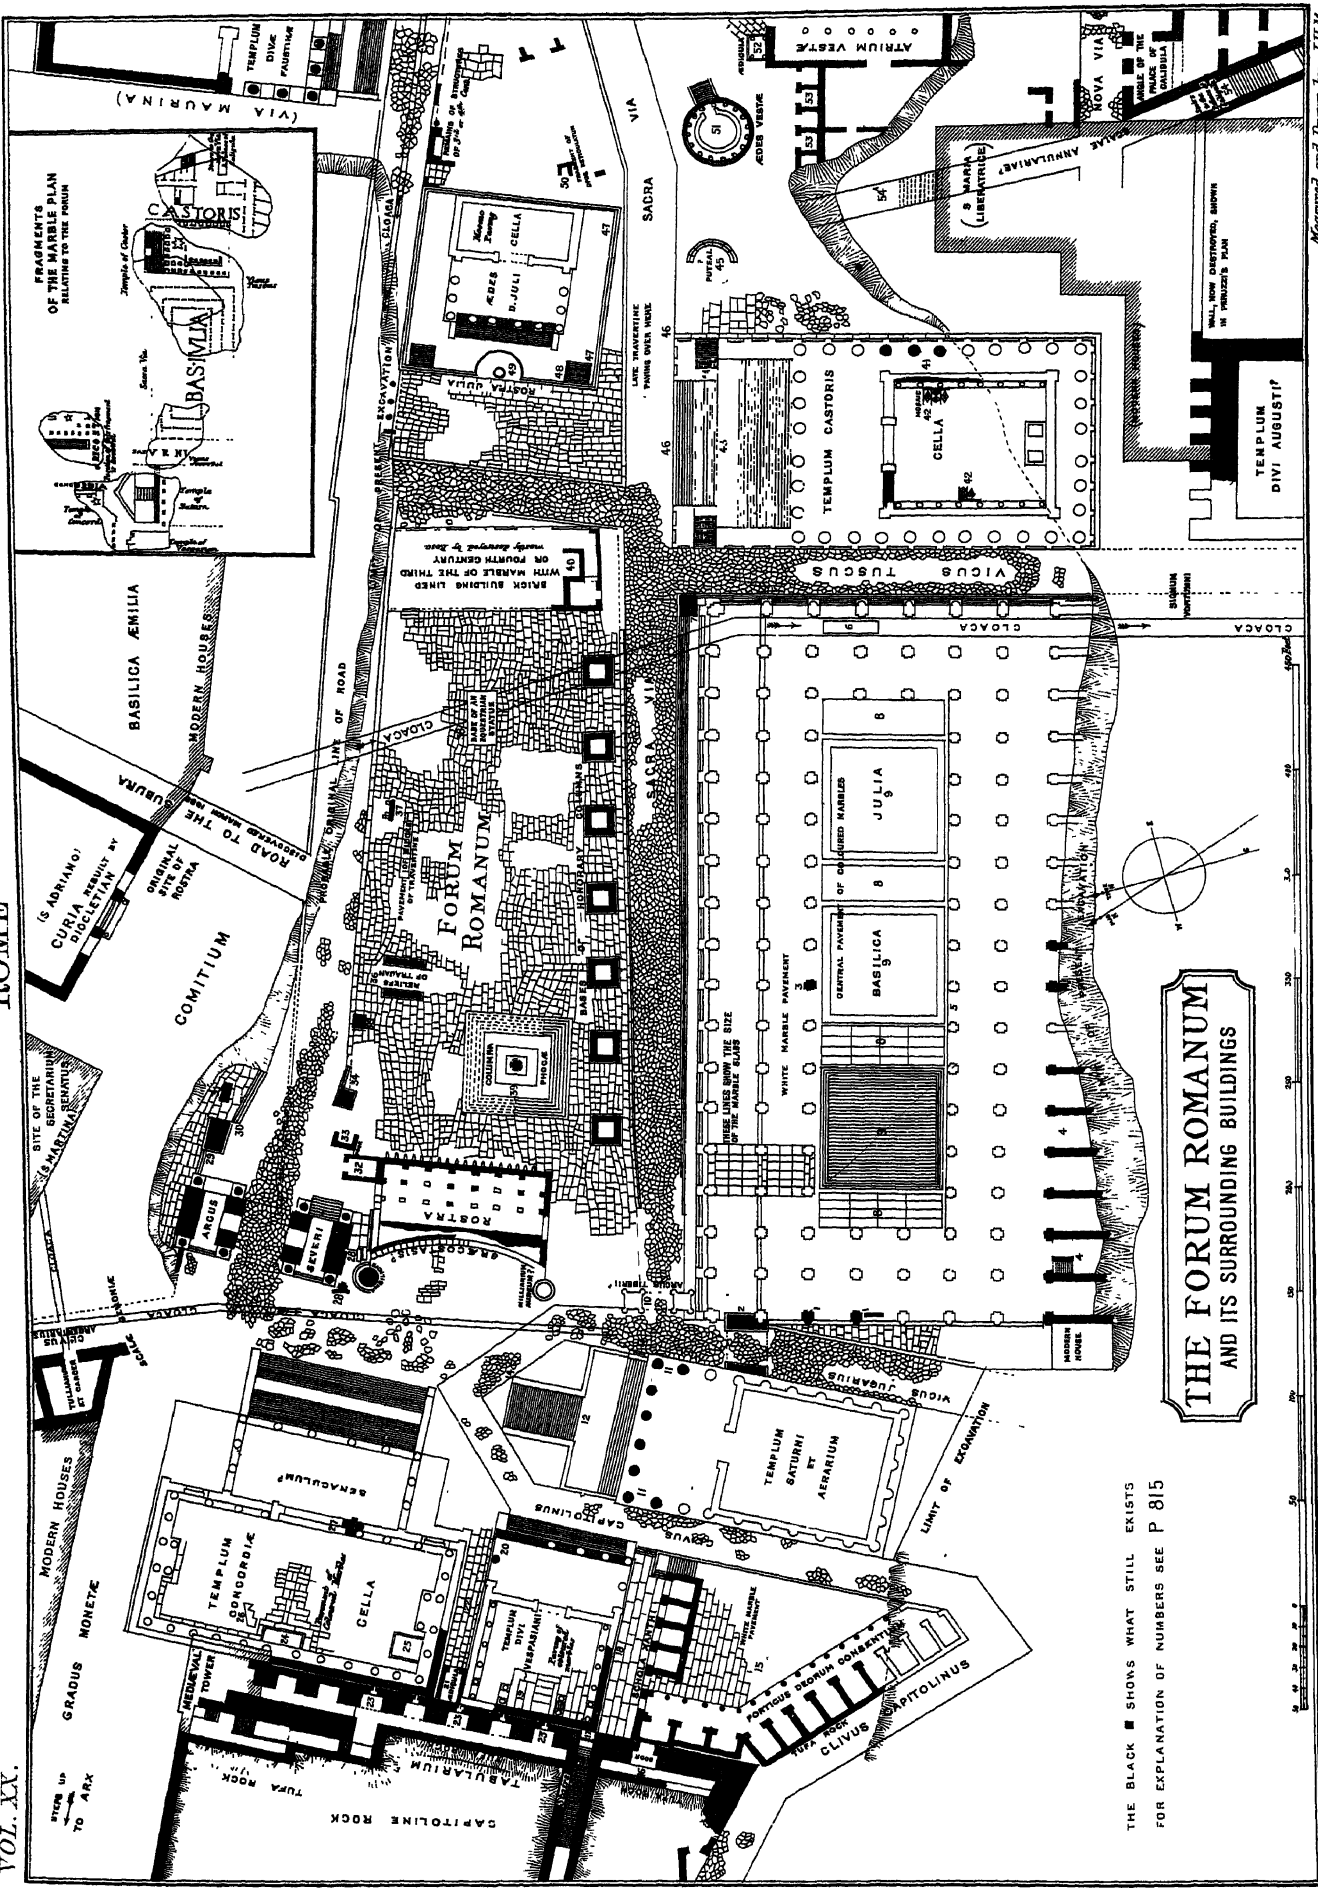

FIG. 11.—Plan and section of the Tullianum or "Mamertine prison." A. Opening in floor over the Tullianum. B. B. Solid tufa rock. C. C. Branch of cloaca. D, E. Position of modern stairs and door. F, F. Front wall of prison with inscription of 22 A.D. G. Probable original top of Tullianum.

¹ See Bruzsa, in *Ann. Inst.*, 1876, p. 72; Jordan, *Topogr.*, i. p. 259.
² It was specially that part of the Campus Martius which was named after the Circus Flaminius that was remarkable for its architectural splendour.
³ On this whole subject consult Nibby and Gell, *Le Mura di Roma*, 1820; Piale, *Porte del Rectinto di Servio*, 1833; Becker, *De Romæ Muris*, Leipzig, 1842; Lanciani, *Ann. Inst.*, 1871, p. 40, *Mon. Inst.*, ix. pl. xxvii., also *Ann. Inst.*, 1857, p. 62, and *Mon. Inst.*, vi. pl. iv.; Quarenghi, *Le Mura di Roma*, 1880 (taken from Lanciani); comp. Vitruvius, i. 5.
⁴ See Liv., i. 38, 66; Dionys., iv. 44.

⁵ Mommsen is mistaken in his assertion that travertine is used in the vault of this cloaca; and hence his argument as to its being of later date falls to the ground.

⁶ A great quay wall with arched cloacæ, similar in style to those in Rome, exists among the remains of the Etruscan city of Gravisce, by the sea near Tarquinii, and also in other Etruscan cities,—a similarity not unnatural if we accept the statement of historians that the great cloacæ were the work of Tarquinius Priscus.

THE FORUM ROMANUM
AND ITS SURROUNDING BUILDINGS

geon, prisoners being lowered through a hole in the stone floor,—the only access. The present stairs are modern. The two chambers are vividly described by Sallust (*Cat.*, 55). The entrance to the upper prison was on the left of the stairs leading up from the Forum to the Clivus Argentarius, the road to the Porta Ratumena (see Plate VII.). Lentulus and the Catiline conspirators, as well as Jugurtha and other prisoners of importance, were killed or starved to death in this fearful dungeon, which is called *τὸ βάρβαρον* by Plutarch (*Marius*, xii.). According to a doubtful tradition of the Catholic Church St Peter and St Paul were imprisoned in the Tullianum. The name Mamertine prison is of mediæval origin. The front wall of the prison was restored in the reign of Tiberius 22 A.D., and bears this inscription on a projecting string-course—C. VIBIVS. C. F. RVFINVS. M. COCCEIVS NERVA COS. EX. S. C.¹ The floor of the upper prison is about 16 feet above the level of the Forum, to which access was given by a flight of steps—*Scalæ Gemoniæ*—on which the bodies of criminals were exposed;² Pliny (*H.N.*, viii. 61) calls it the “stairs of sighs” (*gradus gemitioris*).

Forum Romanum and Adjacent Buildings.

The Forum Romanum or Magnum, as it was called in late times to distinguish it from the imperial fora, occupies a valley which extends from the foot of the Capitoline Hill to the north-east part of the Palatine. Till the construction of the great cloacæ it was, at least in wet seasons, marshy ground, in which were several pools of water. In early times it was bounded on two sides by rows of shops and houses, dating from the time of the first Tarquin (Liv., i. 35). The shops on the south-west side facing the Sacra Via, where the Basilica Julia afterwards was built, were occupied by the *Tabernæ Veteres*.³ The shops on the northern side, being occupied by silversmiths, were called *Tabernæ Argentariæ* (see Liv., xxvi. 27, xl. 51), and in later times, when rebuilt after a fire, were called *Tabernæ Novæ*.⁴ An altar to Saturn (Dionys., i. 34, vi. 1), traditionally set up by the companions of Hercules, and an altar to Vulcan, both at the end towards the Capitol, with the temple of Vesta and the Regia at the opposite end, were among the earliest monuments grouped around the Forum. The Lacus Curtius vanished, as Varro says (*L.L.*, v. 148-149), probably with other stagnant pools, when the cloacæ were constructed (Liv., i. 38, 56).⁵ Another pool, the Lacus Servilius, near the Basilica Julia, was preserved in some form or other till the imperial period. Under Sulla it was used as a place to expose the heads of many senators murdered in his proscriptions (Cic., *Rosc. Am.*, 32; Seneca, *De Prov.*, 3). The Vulcanal or Hephæsteum was an open area, so called from the early altar to Vulcan, and was (like the Comitium) a place of public meeting, at least during the regal period.⁶ It was raised above the Comitium, and probably was a space levelled on the lower slope of the Capitoline Hill behind the arch of Severus; but its exact form and position are very doubtful. It was probably much encroached upon when the temple of Concord was enlarged in the reign of Augustus.

Plate VIII. gives a carefully measured plan of the Forum, showing the most recent discoveries.

Windows in curia of Diocletian (S. Adriano), now below the ground level; see fig. 12, p. 816. 56. Marble doorway shown by Du Perac, now missing.

Unlike the fora of the emperors, each of which was surrounded by a lofty wall and built at one time from one design, the architectural form of the Forum Romanum was a slow growth. The marshy battle-field of the early inhabitants of the capitol and Palatine became, when the ground was drained by the great cloacæ, under a united rule the most convenient site for political meetings, for commercial transactions, and for the pageants of rich men's funerals, *ludi scenici*, and gladiatorial games.⁸ For these purposes a central space, though but a small one, was kept clear of buildings; but it was gradually occupied in a somewhat inconvenient manner by an ever-accumulating crowd of statues and other honorary monuments. On three sides the limits of this open space are marked by paved roads, faced by the stately buildings which gradually took the place of the simple wooden *tabernæ* and porticus⁹ of early times. This central space was essentially the meeting-place of the plebs, or the Comititia Tributa, while the patricians, the Comititia Curia, met on the Comitium, which adjoined the Forum. The Comitium¹⁰ was a level space in front of the Curia; the construction of both is ascribed to Tullus Hostilius. For the position of the Comitium and the Curia¹¹ see plan of Forum (Plate VIII.). Varro (*L.L.*, v. 155-156) gives the following account of the buildings which were grouped along the northern angle of the Forum.

“Comitium ab eo quod coibant eo comitibus curiatis et litium causa. Curia duorum generum, nam et ubi curarent sacerdotes res divinas, ut Curia Veteres, et ubi senatus humanas, ut Curia Hostilia, quod primum edificavit Hostilius rex. Ante hanc Rostra, quojus loci id vocabulum, quod ex hostibus capta fixa sunt rostra. Sub dextra hujus Comitio locus substructus, ubi nationum subsisterent legati qui ad senatum essent missi. Is Græcostasis appellatus a parte ut multa. Senaculum supra Græcostasim, ubi *Ædis Concordiæ* et Basilica Opimia. Senaculum vocatum, ubi senatus, aut ubi seniores consisterent.”

The Curia or senate-house passed through many vicissitudes. Curia.

At first called Curia Hostilia from its founder Tullus Hostilius (Liv., i. 30), it lasted till 52 B.C., when it was burnt at the funeral of Clodius, and was then rebuilt by the son of Sulla, and from his gens called Curia Cornelia (Dion. Cass., xl. 50; Plin., *H.N.*, xxxiv. 12). It was again rebuilt by Augustus (29 B.C.) under the name of the Curia Julia, as recorded in the inscription of Ancyra (see ANGORA)—OVRIAM. ET. CONTINENS. ET. CHALCIDICVM. . . FECI. Little is known about the adjoining buildings called the Athenæum and Chalcedicum; Dion Cassius (li. 22) mentions the group. In the reign of Domitian the Curia Julia was again rebuilt (Prosop. Aquit., p. 571), and lastly by Diocletian. There is strong evidence to show that the existing church of S. Adriano is the Curia of Diocletian, though of course much altered, and with its floor raised about 20 feet above the old level. Fig. 12 shows the front existing towards the Forum, omitting later windows and doors. As late as the time of Du Perac (*Vestigi di Roma*) the old entrance and level were preserved. He gives a drawing¹² of it with steps descending to the doorway. The ancient bronze doors now at the end of the nave of the Lateran basilica originally belonged to this building, and were removed thence by Alexander VII. Fig. 12 is derived from actual measurements of the part above ground, while the lower part, now buried, is derived from Du Perac's drawing and from the bronze doors at the Lateran, which give the size of the opening,

⁸ The first gladiatorial show in Rome was given in 264 B.C. in the Forum Boarium by D. Junius Brutus at his father's funeral (Liv., *Epit.*, xvi. 1), the first in the Forum Romanum in 216 B.C. (Liv., xxiii. 30). See also Liv., xxxi. 50, xli. 28; and Suet., *Cæs.*, 39; *Aug.*, 43; and *Tib.*, 7.

⁹ “Porticus” means a covered colonnade in one or more stories, either in one straight line or enclosing a space like a cloistered quadrangle. A “cryptoporticus” usually implies a covered passage, with walls instead of columns at its sides.

¹⁰ See a valuable paper on the Comitium by Detlefsen, *Ann. Inst.*, 1860; and Dernburg, *Die Lage des Comitiums*. The Comitium was also the chief law-court, where criminal cases were heard by the triumviri capitales. Dictators, consuls, and other officials of Rome held courts there, and received foreign envoys. It was also used for public shows and games and was a place of execution of criminals.

¹¹ Livy (xlv. 24) indicates their relative positions by the phrase “Comitium vestibulum Curia.”

¹² This valuable set of drawings was not published till 1875; but internal evidence shows that many of them, if not all, were made as early as 1540. A good account of the Curia and its vicissitudes is given by Lanciani, *L'Aula e gli Uffici del Senato Romano*, 1883.

and show how deeply the buried part descends below the present level. The brick cornice and marble consoles, covered with enriched mouldings in stucco, and the sham marble facing, also of stucco, if compared with similar details in the baths of Diocletian, leave little doubt as to this being a work of his time, and not, as has been usually assumed, the work of Pope Honorius I., who (625-638 A.D.) consecrated it as the church of S. Adriano.

Comitium.

From the Curia a flight of steps led down to the Comitium (Liv., i. 36), the level of which appears from the existing steps and pavement near the arch of Severus (see Plate VIII.) to have been about 2 feet below that of the Forum, and not above it, as Bunsen and others have asserted.

Original rostra.

On the Comitium stood the ancient rostra till they were rebuilt on a new site by Julius Cæsar in 44 B.C. The ancient rostra were so called in 338 B.C., when Camillus and Mœnius defeated the Latin fleet at Antium, and the beaks (rostra) of the captured ships were fixed to an existing platform on the Comitium for orators. It was also called a "templum" because the structure was consecrated by the augurs (Cic., *De Orat.*, iii. 3). Other rostra, named for distinction Rostra Julia, were so called from the beaks of ships taken at Actium and affixed by Augustus to the podium of the temple built by him in honour of the deified Julius. Both are mentioned by Suetonius (*Aug.*, 100). There were several other platforms or tribunals for orators in and about the Forum, but they were not called rostra. From the original rostra Cicero delivered his *Second* and *Third Catiline Orations*, and they were the scene of some of the most important political struggles of Rome, such as the enunciation of their laws by the Gracchi. Beside the Comitium another monument was erected, also adorned with beaks of ships, to commemorate the same victory at Antium. This was the Columna Mœnia, so called in honour of Mœnius (Plin., *H.N.*, xxxiv. 11, vii. 60). The Columna Duilia was a similar monument, erected in honour of the victory of C. Duilius over the Punic fleet in 260 B.C.; a fragment of it with inscription (restored in imperial times) is preserved in the Capitoline Museum.¹ Columns such as these were called "columnæ rostratæ."

Græco-stasis.

Near the Comitium, on the side towards the Capitol, was the Græcostasis, a platform where foreign ambassadors stood to hear the speeches (see Varro, *loc. cit.*). It appears probable that, like the rostra, the Græcostasis was moved in the 1st century B.C.; and this name has been given with some probability to the curved marble-faced platform behind the existing rostra.

Senaculum.

The Senaculum appears to have been a place of preliminary meeting for the Senate before entering the Curia (Liv., xli. 27; Val. Max., ii. 2, 6); it adjoined the temple of Concord, and when this was rebuilt on an enlarged scale in the reign of Augustus it appears probable that its large projecting portico became the Senaculum (Dionys., i. 34, vi. 1). It may possibly have once been identical with the Area Concordiæ mentioned by Livy (xl. 19) in connexion with the Area Vulcani (comp. xxxix. 46).

Basilica in Forum.

A great part of the north-east side of the Forum was occupied by two basilicae, which were more than once rebuilt under different names. The first of these appears to have been adjacent to the Curia, on its south side; it was called the Basilica Porcia, and was founded by the elder Cato in 184 B.C. (see Liv., xxxix. 44, and Plut., *Cato Major*, 19); it was burnt with the Curia at Clodius's funeral. Adjoining it another basilica, called Æmilia et Fulvia (Varro, vi. 4), was built in 176 B.C. by the censors M. Fulvius and M. Æmilius Lepidus;² it stood, according to Livy (xl. 51),

¹ The column itself is a copy made by Michelangelo; it is at the foot of the stairs of the Palazzo dei Conservatori.

² The Forum Piscatorium or fish-market appears to have been at the back of this basilica (see Liv., xl. 51).

FIG. 12.—Curia of Diocletian, as it was in the 16th century. A, A, A. Original windows now blocked up. B. Bronze doors. C. Stucco facing. D. Cornice with marble consoles and enriched stucco mouldings, both existing. E. Raking cornice now gone, but shown by Du Perac.

"post argentarias novas," the line of silversmiths' shops along the north-east side of the Forum. In 50 B.C. it was rebuilt by L. Æmilius Paulus (Plut., *Cæsar*, 29; Appian, *Bell. Civ.*, ii. 26), and was more than once restored within the few subsequent years by members of the same family. Its later name was the Basilica Pauli, and it was remarkable for its magnificent columns of Phrygian marble (Plin., *H.N.*, xxxvi. 24) or pavonazetto.

Near the middle of the north-east side of the Forum stood also Temples the small bronze temple of Janus,³ the doors of which were shut of Janus on those rare occasions when Rome was at peace.⁴ A first brass of Nero shows it as a small cella, with richly ornamented frieze and cornice. Another ædicula near that of Janus was the shrine of Venus Cloacina (or the Purifier), probably on the line of the great cloaca (Liv., iii. 48; Plin., *H.N.*, xv. 36). Two or more other shrines of Janus stood on this side, behind the shops of the money-lending argentarii; and the word "Janus" was used to imply the place of usurers (Hor., *Sat.*, ii. 3, 18).

So far the buildings mentioned have been mostly those whose sites are still buried under the line of modern houses on the north-east of the Forum, the only part which has not yet been excavated. Turning to those of which existing remains are visible, at the north-west end the rostra of Julius Cæsar mark the limit of the Forum in this direction, as the arch of Fabius beside the temple of Faustina did in the other.

Plate VIII. shows plan of the rostra, with the curved Græcostasis Existing behind it. It is an oblong platform about 78 feet long and 11 feet rostra high above the level of the Forum; its ground floor, paved with herring-bone bricks, is 2 feet 6 inches below the Forum paving. Its end and side walls are of tufa blocks, 2 feet thick and 2 feet wide, each carefully clamped to the next with wooden dovetail dowels. Its floor was supported by a series of travertine piers, carrying travertine lintels, on which the floor slabs rested (see fig. 13). Outside it was completely lined with Greek marble and had a richly moulded plinth and cornice; none of the latter is *in situ*, but many pieces lie scattered around. A groove cut in the top of the cornice shows the place where marble cancelli were fixed; one of the cornice blocks is partly without this groove, showing that the screen did not extend along the whole front of the rostra. This agrees with a relief on the arch of Constantine, representing the emperor making an oration from the rostra, with other buildings at this end of the Forum

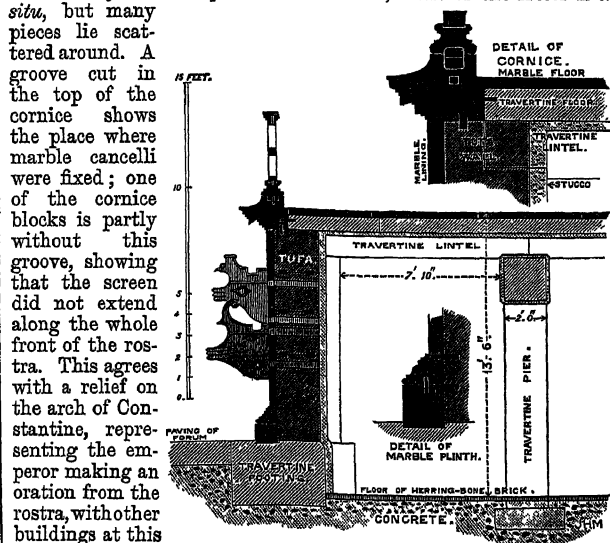

FIG. 13.—Section through front of rostra, showing the shown behind. It is an oblong platform about 78 feet long and 11 feet rostra high above the level of the Forum; its ground floor, paved with herring-bone bricks, is 2 feet 6 inches below the Forum paving. Its end and side walls are of tufa blocks, 2 feet thick and 2 feet wide, each carefully clamped to the next with wooden dovetail dowels. Its floor was supported by a series of travertine piers, carrying travertine lintels, on which the floor slabs rested (see fig. 13). Outside it was completely lined with Greek marble and had a richly moulded plinth and cornice; none of the latter is *in situ*, but many pieces lie scattered around. A groove cut in the top of the cornice shows the place where marble cancelli were fixed; one of the cornice blocks is partly without this groove, showing that the screen did not extend along the whole front of the rostra. This agrees with a relief on the arch of Constantine, representing the emperor making an oration from the rostra, with other buildings at this end of the Forum

with a break in the middle, so that the orator, standing in the centre, was visible from head to foot. Two tiers of large holes to hold the bronze rostra are drilled right through the tufa wall, and even through the travertine pilasters where one happens to come in the way; these holes show that there were nineteen rostra in the lower tier, and twenty above set over the intermediate spaces of the lower row. The back wall of the rostra is of concrete faced with brick, which, being probably the work of Julius Cæsar in 44 B.C., is the earliest dated example of brickwork in Rome. The inside space, under the main floor of the rostra, is coated thickly with stucco,—the brick wall being studded in the usual way with iron nails to form a key for the plaster.

In spite of the assertions of Bunsen, Jordan, and others that the Curved curved platform behind (conjecturally called the Græcostasis) is a platform work of late date, it is evident from various constructional points, visible at the junction of the two structures, that it existed before the rostra, which when built completely hid its rich lining and the pilasters of porta santa marble which decorated its front,—very strong evidence as to the curved platform being earlier in date. The level

³ The original temple was one of the prehistoric buildings attributed to Romulus and Tatius (Serv., *Ad Æn.*, i. 291), or by Livy (i. 19) to Numa.

⁴ See *Mon. Ancyr.*; Procop., *Bell. Goth.*, i. 25; Liv., i. 19; Suet., *Aug.*, 22.

of the top of this platform and that of the rostra appear to have coincided exactly, so that the whole formed one continuous marble-paved platform, and the rostra would be reached, not by steps, but from the higher ground towards the Capitol, from which access is given to the curved platform and so on to the floor of the rostra. The bronze rostra on this structure of 44 B.C. were believed to be the original beaks from Antium, moved from the old rostra (Florus, i. 11). On its marble platform stood many statues,¹ e.g., of Sulla, Pompey, two of Julius Caesar, and others (see Dion Cass., xlii. 18, and xlv. 4). Owing probably to the weight of the many statues proving too much for the travertine piers, which are not set on their natural beds but endways, and therefore are very weak, the structure seems to have given way at more than one time and the floor has been supported by piers and arches of brick-faced concrete, inserted either in place of or at the sides of the shattered piers. These later additions, apparently of the 3d and 4th centuries, are omitted in Plate VII. for the sake of clearness. The moulded plinth of the curved platform is of Pentelic marble, some of the blocks of which are incised with masons' marks, namely, the Greek letters Γ, Δ, Ε, Ζ, Η, Θ, and Κ. A number of metal pins on the face of the slabs of porta santa marble which line its front show that emblemata or reliefs, probably of gilt bronze, were once fastened to the marble.² The use of Greek marble shows that this platform can be but little earlier than the rostra (44 B.C.); and it appears possible that this is the Græcostasis, transferred, like the rostra, to a new site.³ See Varro (*L.L.*, v. 155) and Cicero (*Ad Quint. Fr.*, ii. 1), who mention the original structure. Restorations of the later one by Antoninus Pius and Diocletian are mentioned by Capitolinus (*Ant. Pius*, 8), and in the *Catal. Imp. Vienn.* given by Preller (*Regionen*, p. 143),—in both cases after injury by fire, a fact which seems to show that in later times the Græcostasis had some roofed porticus or shelter and was not a mere open platform as it was originally.

Umbilicus and Milliarium.

At the northern end of the curved platform there is a cylindrical structure of concrete faced with brick, and lined with thin marble slabs; it is in three stages, each diminishing in size, and appears to be an addition of about the time of Severus. This is usually identified with the Umbilicus Romæ, or central point of the city, mentioned in the *Notitia* and the Einsiedeln MS. (see Preller, *Regionen*, Reg. viii.). According to another theory it is the base of the gilt statue of the Genius Populi Romani set up by Aurelian; but this is contradicted by the form of the structure, which is not that of the pedestal of a statue.⁴ At the other extremity probably stood the Milliarium Aureum, a marble column sheathed in gilt bronze and inscribed with the names and distances of the chief towns on the roads which radiated from the thirty-seven gates of Rome (Plin., *H.N.*, iii. 9). It was set up by Augustus in 29 B.C. and its position "sub sede Saturni" is indicated by Tacitus (*Hist.*, i. 27; see schol. on Suet., *Otho*, 6, and Plut., *Galba*, 24). The Milliarium is mentioned in the *Notitia* (Reg. viii.) as being near the Vicus Jugarius. The position shown in Plate VIII. agrees with both these indications, being near the start of the Vicus Jugarius, and close under the temple of Saturn. Fragments of a curved marble plinth and frieze with floriated reliefs, now lying in the Basilica Julia, probably belonged to the pedestal of this column; they were found by Canina near the supposed site.⁵

Temple of Saturn.

The position of the temple of Saturn is described in *Mon. Ancyr.* (see below) and shown on the marble plan, and is also identified by various passages in ancient writers. Varro (*L.L.*, v. 42) speaks of it as being "in faucibus Capitolii";⁶ Servius (*Ad Æn.*, ii. 115) says that it is in front of the Clivus Capitolinus, and near the temple of Concord (see Plate VIII.). It was built against a steep slope or outlying part of the Capitoline Hill (comp. Dionys., i.

34) on the site of a prehistoric altar to Saturn, after whom the Capitoline Hill was originally called Mons Saturnius. The public treasury was part of this temple (Serv., *Ad Æn.*, ii. 116, and Macrob., *Sat.*, i. 8).⁷ The original temple is said by Varro (ap. Macrob., i. 8) to have been begun by the last Tarquin, and dedicated by T. Lartius, the first dictator, 501 B.C.; but Dionysius (vi. 1) and Livy (ii. 21) attribute it to the consuls A. Sempronius and M. Minucius in 497 B.C. It was rebuilt on a larger scale by Munatius Plancus in the reign of Augustus (Suet., *Aug.*, 29). The only part remaining of this date is the very lofty podium of massive travertine blocks, and part of the lower course of Athenian marble, with which the whole was faced. In the 16th century a piece of the marble frieze was found, inscribed L. PLANCVS. L. F. COS. IMPER. ITER. DE. MANIB. (*C.I.L.*, vi. 1316). The erection of the six granite columns in the front and two at the sides, with their clumsily patched entablature, belongs to the last rebuilding in the time of Diocletian. Some of these fine columns are evidently earlier than this rebuilding, but were refixed with rude caps and bases. One of the columns is set wrong way up, and the whole work is of the most careless sort. Part of the inscription, once inlaid with bronze, recording this latest rebuilding still exists on the entablature (see Gori, *L'Erario di Saturno*, 1873).⁸ On the Forum side the temple is flanked by the Vicus Jugarius, while the steep Clivus Capitolinus winds round the front of the great flight of steps leading up to the cella, and then turns along the north-west side of the temple.⁹ The Vicus Jugarius (see Plate VIII.), part Vicus of the basalt paving of which is now exposed, was so called (see Jugarius. Festus, ed. Muller, p. 104) from an altar to Juno Juga, the guardian of marriage. Starting from the Forum, it passed between the temple of Saturn and the Basilica Julia, then close under the cliff of the Capitolium (see Liv., xxxv. 21) and on to the Porta Carmentalis. It was spanned at its commencement by a brick-faced arch lined with marble, the lower part of which exists, and is not earlier than the 3d or 4th century.¹⁰ At this end of the Forum the arch of Tiberius was built across the Sacra Via, which is narrowed as if to bring it under the span of the arch. It was erected in 17 A.D. to commemorate the recovery of the standards lost by Varus.¹¹ A few fragments remain, scattered about in various places.

The Basilica Julia¹² occupies a great part of the south-west side of the Forum, along the line of the Sacra Via; its ends are bounded Julia by the Vicus Jugarius and the Vicus Tuscus. It was begun by Julius Caesar, finished by Augustus, and again rebuilt by him, as is recorded in the *Mon. Ancyr.*,¹³ in an important passage which gives its complete early history. In plan it was a large double porticus, open on three sides, with a range of rooms, two or three stories high, on the south-west side. These rooms, of which considerable remains exist, are built of tufa with travertine pilasters and bands in the tufa wall. This part probably is of the time of Julius Caesar; Augustus surrounded it with an arcade of arches in two stories and engaged Tuscan columns in Luna marble, fragments of which exist at the north-west end. The double aisle which surrounded it was vaulted in concrete, forming upper galleries (*maeniana*), whence spectators heard the law-cases which were conducted in the area below (see Plin., *Ep.*, vi. 33). The central space was not roofed, but probably was sheltered by an awning.¹⁴ It is paved with richly coloured Oriental marbles, namely, pavonazetto, cipollino, giallo, and Africano. The covered aisles are paved with large slabs of white marble.¹⁵ Many *tabulae lusoriae*, or gambling boards, are scratched on this marble paving (comp. Cic., *Phil.*, ii. 23).¹⁶ Low marble cancelli, with moulded plinth, closed the otherwise open arches of the basilica; many fragments exist, and one piece of the subplinth is still *in situ*. This basilica held four law-courts with 180 *judices* or jurors. Trajan and other emperors held law-courts there (Dion Cass., lxxxviii. 10). An inscription found

⁷ In several inscriptions occurs the title "præfecti" or "questores ærarii Saturni" (see Gudius, *Ant. Insc.*, p. 125; Suet., *Claud.*, 24; Tac., *Ann.*, xiii. 28, 29).

⁸ Another important treasury was the temple of Ops, in which were stored the 700,000,000 sesterces left by Julius Caesar at his death (Cic., *Phil.*, ii. 37, and i. 7). It is usually supposed, though without much reason, to have adjoined the temple of Saturn. Livy (xxvii. 10) mentions another treasury, the *Ærarium Sanctius*, in which a reserve store of gold was kept.

⁹ A portion of these streets with part of the temple of Saturn and the Basilica Julia is shown on fragments of the marble plan (see Plate VIII.).

¹⁰ One side of this gate was built against one of the marble piers of the Basilica Julia, a perfect print of which still exists in the concrete of the gate, though the marble pier itself has disappeared. The other side of the gate abutted against the marble-lined podium of the temple of Saturn.

¹¹ See Tac., *Ann.*, ii. 41, who says it was "propter ædem Saturni."

¹² See Suet., *Aug.*, 29; Gerhard, *Bas. Giulia*, &c., 1823; and Visconti, *Excavazione della Bas. Giulia*.

¹³ "Forvm. Ivlivm. et. basilicam. quas. fvit. inter. ædem. Castoris. et. ædem. Saturni. cocepta. profigataqve. opera. a. patre. meo. perfecti. et. eandem. basilicam. consumptam. incendio. ampliatio. eivs. solo. svb. titivlo. nominis. filiorvm. inchoav. et. si. vivis. non. perfecissem. perfici. ab. hæredibvs. [meis. iussit]. The "filii" here referred to are Augustus's grandsons, Caius and Lucius (see Dion Cass., lvi. 27).

¹⁴ One of the late reliefs on Constantine's arch shows this (or a similar building) with the upper galleries crowded with people (see Plin., *Ep.*, vi. 38, 5). The open arches seem to have curtains to keep out the sun.

¹⁵ Three mediæval lime-kilns were found by Canina within this basilica, which accounts for the scantiness of the existing remains.

¹⁶ A few have inscriptions, e.g., "Vineas. gaudes. perdes. plangias."

¹ The original rostra had specially honorary statues to those Roman ambassadors who had been killed while on foreign service (Liv., iv. 17); these were probably removed during Cicero's lifetime (Cic., *Phil.*, ix. 2; see also Dion Cass., xlii. 49, and Plin., *H.N.*, xxxiv. 11). Ghastly ornaments fixed to these rostra in the year 48 B.C., shortly after they were built, were the head and hands of the murdered Cicero (Appian, *Bell. Civ.*, iv. 20; Dion Cass., xlvii. 8; Juv., x. 120), as on the original rostra had been fixed many heads of the chief victims of the proscriptions of Marius and Sulla (see Appian, *Bell. Civ.*, i. 71, 94; Florus, iii. 21; and Cic., *Pro Sext.*, 35, 36). The denarius of the gens Lollia with the legend PALIKANVS was once supposed to have a representation of the rostra on its reverse, but it is now generally admitted that the subject is a harbour containing ships, the beaks of which only are shown. Even if the rostra of the Forum are represented it would be the original suggestum, not that of Julius Caesar.

² This method of decoration was much employed by the Greeks and largely followed by their Roman imitators. For further details on the rostra, &c., see Jordan and Fabricius, in *Ann. Inst.* for 1888; Nichols, *Gli Avanzi dei Rostris*, &c., 1885; and a paper by the present writer in *Archæologia* (read November 1884).

³ It must, however, be admitted that there is very little evidence in support of this theory.

⁴ Becker, *Handbuch*, i. p. 860, adopts this view, and maintains that the Umbilicus and Milliarium were identical, in spite of their being separately catalogued in the *Notitia*.

⁵ What is probably the column of the Milliarium is still lying near its supposed site; it is of Greek marble, and is covered with holes by which the bronze casing was attached. Since the above was written the existing pieces of the marble base have been replaced on its conjectural site.

⁶ In the same passage he mentions a gate near this temple into the Capitolium once called Porta Saturnia, but in his time P. Pandana.

near it records its restoration by Septimius Severus in 199 A.D. after a fire; it was again burnt in 282 and restored by Diocletian. These fires had destroyed nearly all the fine marble arches of Augustus; and Diocletian rebuilt it mostly with brick or travertine piers, a few of which remain.¹ A final restoration is recorded in an inscription discovered in the 16th century, and another in 1882, as being carried out by Gaius Vettius Probianus, praefect of the city in 377 (Gruter, *Inscr.*, clxxi. 7); the latter is on a pedestal which now stands in the Vicus Jugarius. Suetonius (*Cal.*, 37) mentions that it was one of Caligula's amusements to throw money to the people below from the roof of this basilica, which probably was a link in the bridge by which this maniac connected the Palatine with the Capitolium. The line of the bridge, which starts in the upper part of Caligula's palace, passes over a lofty and massive brick-faced building, once lined with marble, which stands on the lower slopes of the Palatine. Suetonius's account (*Cal.*, 22) of the bridge makes it very probable that this building is the temple of Augustus, as there is no other possible site for it on the line from the Palatine to the Capitolium. The intermediate stages from the temple to the basilica and thence to the Capitolium were probably merely a wooden structure, as no traces of it now remain. The temple of Augustus was begun by Tiberius and finished by Caligula (Suet., *Cal.*, 21).

Vicus Tuscus. The Vicus Tuscus passes from the Sacra Via between the Basilica Julia and the temple of Castor to the Velabrum and Circus Maximus; its basalt paving has been exposed at many points along its whole line (see Liv., xxvii. 37). A very early statue of one of the chief Etruscan deities, Vortumnus, stood in this street, a little to the south-west of the Basilica Julia, where part of its pedestal was found in 1849 inscribed VORTVMNVS TEMPORIBVS DIOCLETTIANI ET MAXIMIANI . . . (C.I.L., vi. 804;² see also Pseudo-Ascon., *Ad Cic. Verr.*, ii. 1, 59). The Vicus Tuscus was also called Thurarius, from shops of perfume-sellers (see Hor., *Sat.*, ii. 3, 228, and *Ep.*, ii. 269). It is the street along which processions passed, mentioned by Cicero (*Verr.*, ii. 1, 59) as extending "a signo Vertumni in Circum Maximum."

Temple of Castor. The temple of Castor³ on the south-east side of the Vicus Tuscus was founded to commemorate the apparition in the Forum of the Dioscuri announcing the victory of Aulus Postumus at Lake Regillus, 496 B.C., and was dedicated in 482 B.C. by the son of A. Postumus (Liv., ii. 20, 42; Dionys., vi. 13; Plut., *Coriol.*, 3; Ov., *Fast.*, i. 797). In 119 B.C. it was restored by the consul L. Metellus Dalmaticus (Ascon., *In Cic. Pro Scaur.*, 46) and finally rebuilt in the reign of Augustus by Tiberius and Drusus, 6 A.D. (Suet., *Tib.*, 20; Ov., *Fast.*, i. 705; Dion Cass., lv. 8, 27), to which period belong the three existing Corinthian columns and piece of entablature, all very delicate and graceful in detail, and of the finest workmanship, in Pentelic marble; the design is of pure Greek style. One point shows Roman timidity in the use of a lintel: the frieze is jointed so as to form a flat arch, quite needlessly, with the object of relieving the weight on the architrave. Its plan, hexastyle, with only eleven columns on the sides, is shown in Plate VIII. and fig. 14. It had a lofty podium, lined with marble, and decorated with a heavy cornice and pilasters, one under each column. The podium is an interesting example of the enormous solidity of Roman buildings of the best period. Solid tufa walls, 8 feet thick, are built under the whole of the cella and the front row of columns, while the columns of the sides rest on spurs of similar walling, projecting at right angles from that under the cella; the part immediately under the columns is of travertine, and the spurs are united and strengthened laterally by massive flat arches, also of travertine. With the exception of a small chamber under the steps, entered from the Vicus Tuscus, the entire podium is filled up by a solid mass of concrete, made of broken tufa, pozzolana, and lime, the whole forming a lofty platform, about 22 feet high, solid as a rock, on which the columns and upper structure are erected. Small chambers formed in the concrete basement, such as the one in this temple, occur in many instances, e.g., in the temples of Saturn, Divus Julius, and Concord. They were probably used as strong rooms, in which money and plate were deposited for safe keeping (see Juv., xiv. 260), a purpose for which Roman temples were frequently used. Two fragments of mosaic, with simple lozenge pattern in white marble and basalt, still exist in the cella of this temple. The level of the mosaic shows that it is of earlier date than the rebuilding of Tiberius, as it lies considerably below the level of the later floor. It has all the characteristics of early mosaic—very small tesserae fitted with great accuracy, like the early mosaic in the Regia. The temple of Castor was often used as a meeting-place for the

Senate, and its lofty podium formed a tribunal for orations.⁴ Close by it was another tribunal, probably merely a wooden suggestion—called the Tribunal Aurelium (see Cic., *In Pis.*, 5, and *Pro Sext.*, 15).

The Fons Juturnae (see Ov., *Fast.*, i. 705, and Dionys., vi. 13), at which the Dioscuri were fabled to have watered their horses, was beside their temple, and the circular travertine curb close by has been supposed to have belonged to this. Its form, however, makes it more probable that it was the plinth of a screen round the Puteal Scribonis or Libonis (Hor., *Ep.*, i. 19, 8, and *Sat.*, ii. 6, 35),—a circular marble structure like a well-mouth, ornamented with reliefs of lyres and garlands, used to enclose some spot struck by lightning or sacred from other causes. It is shown on a denarius of the gens Scribonia. The Sacra Via, in its course from the Regia towards the temple of Saturn, originally passed in front of the temple of Castor; but in late times its line was changed, and it is now covered at this point by rude paving of travertine and marble, probably not earlier than the 5th century. The ancient line is indicated by the Regia, shown on fig. 16.

On the other side of the Sacra Via stand the scanty remains of Temple the temple of Divus Julius, erected by Augustus. Though little of Divus beyond its concrete core is left, its plan can be fairly well made out Julius from the voids in the concrete, which show the position of the tufa foundations under the walls and columns (as in the temple of Castor). The temple itself, a hexastyle prostyle building, with close pyknostyle intercolumniation (Vitruv., iii. 2), stood on a lofty podium with a curved recess in the front between two flights of stairs (see Plate VIII.). The wall which now fills up the recess is a late addition. It is possible that this very unusual plan was adopted in order that the recess might leave room for the pre-existing altar (Appian, *Bell. Civ.*, ii. 148) or column (Suet., *J. Cæs.*, 85) erected by the Senate with the inscription PARENTI PATRIÆ. The podium, which projects in front of the temple itself, was adorned with beaks from the ships taken at Actium (Dion Cass., li. 19), and hence it was called the Rostra Julia, to distinguish it from the other rostra described above. Both were used for the funeral orations in honour of Augustus (Suet., *Aug.*, 100; see also Dion Cass., liv. 35). Besides the concrete core and the curved tufa wall of the recess, little now exists except a small bit of the mosaic of the cella floor and some fragments of the cornice and pediment, of fine Greek marble. This temple is represented on coins of Augustus and Hadrian.

The temple of Vesta, founded according to tradition by Numa,⁵ Temple stands at the southern angle of the Forum on the ancient line of of Vesta. the Sacra Via (Ov., *Trist.*, iii. 1, 28). No shrine in Rome was equal in sanctity to this little circular building, which contained the sacred fire and the relics on which the welfare and even the existence of Rome depended. The shrine was an "ædes sacra," not a "templum" in the strict sense of the word, which means a building so inaugurated that it could be used for meetings of the Senate. The original building was destroyed in 390 B.C. by the Gauls; it was burnt again in 241 B.C., again in the great fire of Nero's reign, and then in the reign of Commodus; after this it was rebuilt by

Fig. 14.—Plan of temple of Castor, half showing construction of podium. A. Pedestal of one of the two statues. B, B. Spurs of foundation wall, of travertine and tufa, under the three existing columns. C. Steps to small chamber in concrete core of podium. D. Existing piece of mosaic paving of earlier building.

¹ The whole building has unhappily been much falsified by needless restoration.

² A drawing of this pedestal, which is now lost, with MS. note by Ligorio, exists in *Cod. Vat.*, 8489, fol. 46. Propertius (*Elég.*, iv. 2) gives an interesting account of Vortumnus, and in l. 50 mentions the derivation of the name Vicus Tuscus.

³ The temple of Castor is shown on two fragments of the marble plan (see Plate VIII.), and its position is also indicated by the passage in the *Mon. Ancyr.* quoted above.

⁴ One of the mad acts of Caligula was to connect the temple of Castor with his palace by breaking a door through the back of the cella (Suet., *Cal.*, 22). Though dedicated to both the Dioscuri, the building was usually called the temple of Castor only (see Suet., *J. Cæs.*, 10).

⁵ Another legend attributes its founding to Romulus.

Severus, to whose age belong the fragments of columns, cornice, and other architectural features now lying around the ruined podium. These, with the help of representations of the temple on coins of Domitian,¹ and an ancient relief in the Uffizi (see Lanciani, *L'Atio di Vesta*, 1884, pls. xix.-xxi.), are sufficient to make an accurate restoration (see Plate VIII. and fig. 15). It consisted of a circular cella, surrounded by eighteen columns, with screens between them; the circular podium, about 10 feet high, still exists,

FIG. 15.—Temple of Vesta, as rebuilt by Severus, conjecturally restored by Comm. Lanciani from existing remains.

mainly of concrete with some foundations of tufa blocks, which may belong to the original structure. In the time of Pliny (*H. N.*, xxiv. 7) the tholus or dome over the cella—symbolizing the canopy of heaven (*Or.*, *Fast.*, vi. 276)—was covered with Syracusan bronze. Horace's mention (*Od.*, i. 2, 13) of the destruction of the temple by a Tiber flood caused the mistaken notion that the similar round temple still existing near the exit of the Cloaca Maxima was the *Ædes Vestæ*; but the flood of 1877 showed that the waters of the river could still reach this point in the Forum. Its position near the temple of Castor is mentioned by Martial (i. 71-73).²

Regia.

The Regia (see fig. 16), or residence of the pontifex maximus, was on the Sacra Via, close by the temple of Vesta. It also was traditionally founded by Numa, and used as his dwelling-house; it was

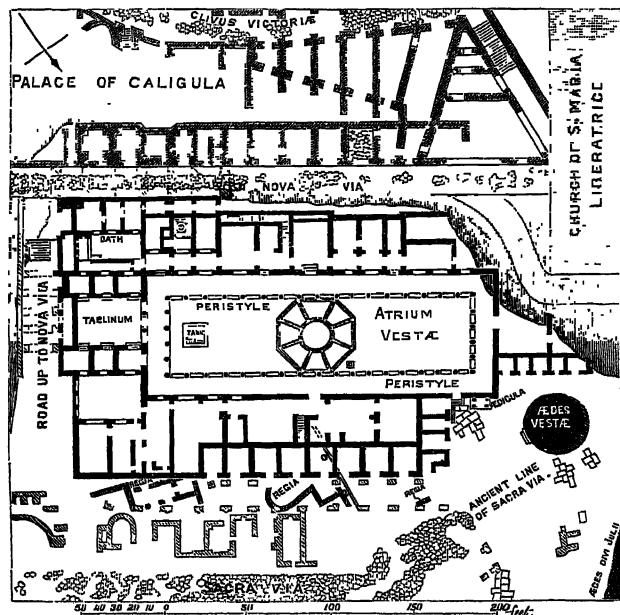

FIG. 16.—Plan showing the remains of the temple of Vesta, the Regia, and the house of the vestals, as rebuilt by Hadrian; excavated 1888-84.

destroyed in 390 B.C. by the Gauls, and was again burnt in 210 B.C. (*Liv.*, xxvi. 27), when the temple of Vesta narrowly escaped. Julius Caesar, as pontifex maximus, resided here; and when Augustus succeeded to this office in 12 B.C. he gave the Regia to the vestals, having built himself a large house on the Palatine. When the Atrium Vestæ or house of the vestals was rebuilt on an enlarged scale the Regia was pulled down and its site partly occupied by

the new atrium. Ovid (*Trist.*, iii. 1, 28) describes this end of the Forum thus—

"Hæc est a sacris quæ via nomen habet,
Hic locus est Vestæ, qui Pallada servat et ignem,
Hic fuit antiqui Regia parva Nunnæ."

The excavations of the last few years have laid bare remains of this very interesting building, and show that it was a large house extending close up to the temple of Vesta.—*ἀνδράγος*, as Dion Cassius (vi. 27) says.³ It was set at a quite different angle from the Atrium and other later buildings which were built over its foundations; this angle shows the original line of the Sacra Via, which in later times was diverted into a different direction. The existing remains are of several dates,—first, walls of soft tufa, part possibly of the earliest building; second, walls of hard tufa, of rather later date; and lastly, concrete walls faced with brick, decorated with painted stucco, and columns of travertine, also stuccoed and painted,⁴ with a large quantity of fine mosaic of that early sort which has very small tesserae put together with great accuracy. This last part probably belongs to the rebuilding by Domitianus Calvinus in 35 B.C. (Dion Cass., xliii. 42). These valuable remains were preserved in spite of the erection of later buildings over them because the levels of the later floors were higher than those of the Regia, and thus covered and protected the mosaics and lower parts of the walls and columns (see fig. 16). Besides being a dwelling-house, the Regia contained a sacrum, in which were preserved the sacred spears of Mars (*Aul. Gell.*, iv. 6), and also the shrine of the Dea Ops Consiva, only entered by the vestals and the sacerdos publicus (Varro, *L. L.*, vi. 21).

The Atrium Vestæ or house of the vestals, like the temple, was Atrium many times burnt and rebuilt; the existing building, which was excavated in 1883-84, is of the time of Hadrian, as is shown by the brick stamps. It consists of a large atrium or quadrangle with columns of cipollino. At one end is the tablinum, with three small rooms on each side of it,—probably for the six vestals. A bathroom, bakehouse, servants' offices, and some rooms lined with rich marbles extend along the south-west side. This extensive building is set against the side of the Palatine, which is cut away to admit the lower story. Thus the level of the first upper floor is nearly the same as that of the Nova Via, on which it faces, about 23 feet above the ground floor. The upper floor is in part well preserved; it contains a large suite of bath and other rooms, which were probably the sleeping apartments of the vestals. All the better rooms and the baths are lined with polished marbles, many of great beauty and rarity; the floors are mostly mosaic of tessellated work. The paving of the tablinum was a beautiful specimen of inlay in porphyry and marble. In many places alterations and clumsy patchings of the 4th and 5th centuries are apparent. A number of statues of the chief vestal, or virgo vestalis maxima, with inscribed pedestals, were found in the atrium, mostly of the 3d century, though a few are earlier; these are of especial interest as illustrating the sacerdotal dress of the vestals.⁵ Nothing but the Nova Via separates the Atrium Vestæ from the palace of Caligula (see Plin., *Ep.*, vii. 19; *Aul. Gell.*, i. 12), which extends over the site of the *Lucus Vestæ*.—"qui a Palatii radice in Novam Viam devexus est" (*Cic.*, *De Div.*, i. 45). A curious octagonal structure in the middle of the atrium (see fig. 16) looks very much like a border for flower-beds; and it is possible that this miniature garden was made by the vestals when Caligula built over their extensive grove on the slopes of the Palatine. By the main entrance from the Forum stood a small adicula,—a large pedestal at the angles of which were columns supporting an entablature.⁶ It may have contained a statue of Vesta, there being none within the temple. It is of the time of Hadrian. The last of the vestals is mentioned by Zosimus (v. 38) as being alive in 394; but the Atrium continued to be partly inhabited for many centuries later.⁷ In September 1884 a road was discovered leading up past the tablinum end of the Atrium from the Sacra Via to the Nova Via (see fig. 16). In about the 4th century this road appears to have been blocked up at the Nova Via end by a building which adjoined the Atrium Vestæ.

At the east corner of the Forum stood the arch of Q. Fabius Arch of Maximus, consul in 121 B.C., called Allobrogicus from his victory Fabius.

³ See a monograph by the present writer in *Archæologia* (read November 1884).

⁴ The columns were crimson, the travertine rain-water gutter bright blue, and the inner walls had simple designs in panels of leaf ornament and wreaths.

⁵ One of these, a noble figure of the time of Hadrian, is especially remarkable as being the only statue known on which the *suffibulum* is represented, a sort of hood, only worn by the vestal at the moment of offering sacrifice (see Festus, ed. Müller, p. 340; and Varro, *L. L.*, vi. 21). Many points of great interest occur in the inscriptions on the pedestals.

⁶ The front and one side are now lying near; the former is inscribed SENATVS POPVLVSQVE ROMANVS PECVNIA PVBLICA FACIENDAM CVRAVIT.

⁷ In the excavations of December 1885 a pot was found in the north corner containing 830 silver pennies of English kings of the 9th and 10th centuries,—Alfred the Great, Eadward I., Athelstan, Eadmund I., and others. A list of these is given by De Rossi in Lanciani's work, *L'Atio di Vesta* (Rome, 1884). None are later than 946, and a bronze fibula inlaid with silver with the name of Pope Marinus II. (942-946) makes it seem probable that this hoard was concealed during his pontificate.

¹ The temple of Vesta is also shown on medals of Faustina senior, Lucilla, Crispina, and Julia Domna (see Froehner, *Médaillons de l'empire Romain*, Paris, 1878, pp. 76, 96, 148, 159). It very closely resembles the so-called tomb of St. Luke at Ephesus, a Roman work of about the same date.

² See Lipsius, "De Vesta," in Grævius, *Thes. Ant. Rom.*, v.; Cancellieri, *Le sette Cose fatali di Roma*, 1812; Preuner, *Hestia-Vesta*, Tübingen, 1864; Jordan, *Vesta und die Laren*, Berlin, 1865; Maes, *Vesta et Vestali*, 1888.

over the Allobroges (schol. on Cic., *In Verr.*, i. 7; Liv., *Ep.*, lvi.; Plin., *H.N.*, vii. 50). It marked the extreme limit of the Forum in this direction (Cic., *Pro Plan.*, 7, 17), as the rostra did at the other end. This arch was dug up and mostly destroyed in 1540-50, near the temple of Faustina; on one of the fragments then discovered was inscribed Q. FABIVS. Q. F. MAX-SVMVS. AED. CVR. REST. About twenty-five other fragments were found in 1882.¹ The arch of Augustus, erected in 29 B.C., also stood near this point, but its exact site is uncertain. An inscribed block of its attic was found during the excavations of 1540-50.

Temple
of Faustina.

The temple of Faustina the elder stands at the east angle of the Forum, facing the later line of the Sacra Via. It is prostyle hexastyle, and has monolithic columns of cipollino and a rich entablature of Greek marble, with graceful reliefs of griffins and candelabra on the frieze.² The walls are of massive peperino, once lined with marble. On the front is inscribed DIVO. ANTONINO. ET. DIVAE. FAVSTINAE. EX. S. C. This temple, built by Antoninus Pius in memory of his wife, who died in 141, was after his death dedicated also to him, and the first line was then added (Capitolinus, *Ant. Pius*, 6). At an early period it was consecrated as the church of S. Lorenzo in Miranda, and a great part of its cella has been destroyed. The front is now excavated to the original level. This temple is shown on the reverse of several coins of Antoninus Pius; some have the legend DEDICATIO. AEDIS.

Temple
of Concord.

The space between the north-west end of the Forum and the Tabularium is occupied by a range of important buildings (see Plate VIII.). The chief of these is the temple of Concord (see Festus, ed. Müller, p. 347) shown on a fragment of the marble plan, founded by Camillus in 367 B.C. (Plut., *Cam.*, 42), and rebuilt by the brothers Tiberius and Drusus out of the spoils gained in Germany; it was rededicated in 10 A.D. (Suet., *Tib.*, 20; Dion Cass., lv. 25). It is shown with unusual minuteness on the reverse of a first brass of Tiberius. It is probable that an earlier restoration was carried out by L. Opimius in 121 B.C. (Plut., *C. Gracch.*, 17; Appian, *Bell. Civ.*, i. 26). The existing remains³ are of the rebuilding by Tiberius and Drusus, and show that it was unusual in plan, having a large cella much wider than its depth, and a very large projecting portico. Its construction is an interesting example of the Roman use of many different materials. The lower part of the walls was of massive tufa blocks, the upper part of the cella of travertine; and the inner low wall, which supported ranges of internal columns, was of mixed concrete, tufa, and travertine. The whole was lined with marble, white outside, and rich Oriental marbles inside (see fig. 5), which were also used for the pavement. The door-sill is made of enormous blocks of porta santa marble, in which a bronze caduceus (emblem of Concord) was inlaid. Between the internal columns of the cella stood rows of statues; and the temple also contained a large collection of pictures, engraved gems, gold and silver plate, and other works of art, mostly the work of ancient Greek artists (see Plin., *H.N.*, xxxiv. 19, xxxv. 36, 40, xxxvi. 67, xxxvii. 2). On the apex of the pediment was a group of three figures embracing; the tympanum was filled with sculpture; and statues were set in the open porch. Though now only the podium and the lower part of the cella wall exist, with foundations of the great flight of steps, many rich fragments both of the Corinthian entablature and of the internal caps and bases are preserved in the Capitol; and some of the marble lining is still *in situ*. The Einsiedeln MS.⁴ gives part of the inscription of the front—S. P. Q. R. AEDEM. CONCORDIAE. VETVSTATE. COLLAPSAM. IN. MELIOREM. FACIEM. OPERE. ET. CVLTV. SPLENDIDIORE. RESTITVERVNT.⁵ Another temple of Concord, built in 219 B.C., stood on the Capitoline Arx (Liv., xxii. 33, xxvi. 23); and a bronze aedícula of Concord in the Area Vulcani, which must have been close by the great temple. This was dedicated by Cn. Flavius, 305 B.C. (see Liv., ix. 46); according to Pliny (*H.N.*, xxxiii. 6) it stood "in Gracostasi, quae tunc supra Comitium erat." Both these were probably only small shrines.

Temple
of Vespasian.

The temple of Vespasian stands close by that of Concord, abutting on the Tabularium in a similar way, and blocking up a doorway at the foot of a long flight of steps (see fig. 1). It consists of a nearly square cella with prostyle hexastyle portico of the Corinthian order; three of the columns are still standing, with their rich entablature, the frieze of which is sculptured with sacred instru-

ments. The walls are of enormous blocks of travertine with strong iron clamps; the whole was lined with white Pentelic marble outside, and inside with coloured Oriental marbles. There was an internal range of columns, as in the temple of Concord. This temple was built by Domitian, c. 94 A.D., in honour of his father Vespasian. The inscription on the entablature, given in the Einsiedeln MS., records a restoration by Severus and Caracalla—DIVO. VESPASIANO. AVGVSTO. S. P. Q. R. IMPP. CAESS. SEVERVS. ET. ANTONINVS. PII. FELIC. AVGG. R[ESTITV]ERVNT; part of the last word only now exists.⁶

In the narrow space between the temples of Concord and Vespasian (only about 7 feet in width) a small brick and concrete aedícula stands against the Tabularium. This has been wrongly called a shrine of Faustina, on the authority of a small inscribed pedestal found near it;⁷ but there is clear constructional proof that it is contemporary with the temple of Vespasian, and is therefore of the time of Domitian.⁸ It may possibly have been a shrine dedicated to Titus, whose name does not occur in the inscription of the adjoining temple, though the catalogue in the *Curiosum*, Reg. ix., mentions a dedication to both father and son.⁹

The next building is the Porticus XII. Deorum Consentium, a Porticus large marble platform facing the Clivus Capitolinus, with a row of XII. small rooms or shrines partly cut into the tufa rock of the hill Deorum. This conjunction of twelve deities was of Etruscan origin; they were six of each sex and were called Senatus Deorum (Varro, *L.L.*, viii. 70, and *De Re Rust.*, i. 1).¹⁰ The columns are of cipollino with Corinthian caps; on the frieze is an inscription recording a restoration by Vettius Prætextatus, praefect of the city in 387 A.D. Under the marble platform is a row of seven small rooms, the brick facing of which is of the Flavian period, used as offices (schola) for scribes and praefects of the aediles. It is usually called the Schola Xanthi from an inscription, now lost, recording its restoration by A. Fabius Xanthus and others, and the erection of seven silver statues of gods (Gruter, *Inscr.*, 170, 3).¹¹

The arch of Severus stands by the rostra, across the road on the Arch of north-east side of the Forum; the remains of the ancient travertine Severus. curb show that originally the road went along a rather different line, and was probably altered to make room for this great arch. It was built in 203 A.D., after victories in Parthia, and was originally set up in honour of Severus and his two sons Caracalla (here called M. Aurelius Antoninus) and Geta. Caracalla, after murdering Geta, erased his name from all monuments to his honour in Rome. Representations of the arch on coins of Severus show that its attic was surmounted by a chariot of bronze drawn by six horses, in which stood Severus crowned by Victory; at the sides were statues of Caracalla and Geta, with an equestrian statue at each angle. The arch, except the base, which is of marble-lined travertine, is built of massive blocks of Pentelic marble, and has large crowded reliefs of victories in the East, showing much decadence from the best period of Roman art.

The central space of the Forum is paved with slabs of travertine, Central much patched at various dates; it appears to have been marked space of out into compartments with incised lines (see Plate VIII.), the use Forum. of which is not known.¹² Numerous clamp-holes all over the paving show where statues and other ornaments once stood. The recorded number of these is very great, and they must once have thickly crowded a great part of the central area. Two short marble walls or plutei covered with reliefs, discovered in 1872, stand on the north side. Their use and original position are not known, as the rough travertine plinth on which they have been set is evidently of late date. Each of these marble screens has (on the inside) reliefs of a fat bull, boar, and ram, decked out with sacrificial wreaths and vittæ—the suovetaurilia. On the outside are scenes in the life of Trajan: one has the emperor seated on a suggestus instituting a charity for destitute children in 99 A.D.—a scene shown also in one of his first brasses—with the legend ALIM[ENT]A ITALIAE;¹³ at the other end the emperor stands on the rostra, on which the two tiers of beaks are shown; he is addressing a crowd of citizens. The backgrounds of this and the other relief are of great topographical interest. In the first is shown the long line of arches of the Basilica Julia, with (on the left) what is probably the temple of Castor and the arch of Augustus. On the right are the statue of Marsyas and the sacred fig-tree (*figus ruminalis*),¹⁴

⁶ See Piale, *Tempi di Vespasiano e Concordia*, 1821.

⁷ This pedestal is now on the ground floor of the Capitoline Museum; its inscription is interesting, being a dedication to Faustina by a viator (messenger) of one of the quaestors of the Atrium Saturni. Its discovery near this aedícula was probably accidental.

⁸ Exactly that part of the marble plinth of the temple of Vespasian which was concealed by the aedícula is left rough, the moulding not being worked, showing that the little shrine is not an addition later than the temple.

⁹ See Preller, *Regionen der Stadt Rom*, Reg. ix., and Uhlich, *Codex Topog. Romae*, Reg. ix.

¹⁰ Twelve gilt statues are mentioned by Varro.

¹¹ See Grifi, *Gli Consenti e loro Portico*, 1858.

¹² They may possibly have had something to do with the marshalling of the voters of the Comitia Tributa.

¹³ Cohen, vol. ii. 308-309.

¹⁴ Pliny (*H.N.*, xv. 20) mentions another fig-tree in the middle of the Forum, which may possibly be the one here represented.

¹ *Ann. Inst.*, 1859, p. 307; *Not. degli Scavi*, 1882, p. 225.

² This finely sculptured frieze is almost an exact copy of that on the temple of Apollo at Miletus.

³ The size of the earlier and smaller temple is indicated by the rough blocks on the face of the wall of the Tabularium, close against which the temple stands. When the Tabularium was built it was not thought worth while to dress to a smooth face that part of its wall which was concealed by the then existing temple of Concord.

⁴ The anonymous writer of this MS. appears to have visited Rome in the 9th century. The MS. is named after the monastery in which it is preserved.

⁵ Little is known of the Basilica Opimia, which probably adjoined the earlier temple of Concord, and the existing building appears also to have occupied the site of the Senaculum (see Festus, ed. Müller, p. 347). For various exciting scenes which took place in the temple of Concord and on its steps, see Cic., *Phil.*, vii. 8; Sallust, *Bell. Cat.*

which stood on the Comitium. On the other slab the emperor is seated on the rostra (this part is broken), while in front a crowd of citizens are bringing tablets and piling them in a heap to be burnt. This records the remission by Trajan of some arrears of debt due to the imperial treasury (Spartian, 7). The background here represents again the Basilica Julia, with (on the right) the Ionic temple of Saturn and the Corinthian temple of Vespasian. Between them is an arch, which may be that of Tiberius. On the left the fig-tree and the statue of Marsyas are repeated. Other explanations of these reliefs have been given, but the above appears the most probable.¹ Towards the other end of the Forum are remains of a large concrete pedestal. This is usually called the base of the equestrian statue of Domitian (Statius, *Silv.*, i. 22), which stood in front of the *Ædes Julii*; but its brick facing shows that it is much later than Domitian's time, and, moreover, Domitian's statue was destroyed immediately after his death.

The seven cubical brick and concrete structures, once faced with marble, which line the Sacra Via, are not earlier than the time of Constantine.² They are probably the pedestals of honorary columns, such as those shown in the relief on Constantine's arch, mentioned above. The column erected in honour of the tyrant Phocas by Smaragdus in the eleventh year of his exarchate (608) is still standing. It is a fine marble Corinthian column, stolen from some earlier building; it stands on rude steps of marble and tufa. The name of Phocas is erased from the inscription; but the date shows that this monument was to his honour. Remains of other small marble structures are shown in Plate VIII., but what they are is not known. In the 4th century a long brick and concrete building faced with marble was built along the whole south-east end of the Forum, probably a row of shops. They were destroyed by Comm. Rosa's order a few years ago. Countless fragments of other buildings, reliefs, and statues are strewn all over the Forum. Many of these are of great interest; pieces of large granite columns which probably stood on the seven pedestals mentioned above are lying in various places; some of these appear to have been decorated with bronze reliefs, the iron fastenings of which, run with lead, still exist.³

Palatine Hill or Palatium.

In addition to the walls of Roma Quadrata (see above), a few remains only now exist earlier in date than the later years of the republic; these are mostly grouped near the *Scalæ Caci* (see No. 11 in fig. 17) and consist of small cellæ and other structures of unknown use.⁴ They are partly built of the soft tufa used in the wall of Romulus and partly of the hard tufa which resembles peperino. Various names, such as the "hut of Faustus" and the "Augurarium," have been given to these very ancient remains, but with little reason. One thing is certain, that the buildings were respected and preserved even under the empire and were probably regarded as sacred relics of the earliest times. Remains of more than one temple, probably of the early republican period, exist near this west angle of the Palatine; these had peristyles with Tuscan columns of tufa stuccoed and painted. The larger of these (see 14 in fig. 17) has been called conjecturally the temple of Jupiter Victor (Liv., x. 29; Ov., *Fast.*, iv. 621). It stands on a levelled platform of tufa rock, the lower part of which is excavated into quarry chambers, used in later times as water reservoirs. Two ancient well-shafts lined with tufa communicate with these subterranean hollows. Another extensive building of hard tufa of the republican period exists in the valley afterwards covered by the Flavian palace; part of this can be seen under the so-called *Accademia* (21 in fig. 17). Not far from the top of the *Scalæ Caci* are the massive remains of some large cella, nothing of which now exists except the concrete core made of alternate layers of tufa and peperino. It was probably once lined with marble. By it a noble colossal seated figure of a goddess was found, in Greek marble, well modelled, a work of the 1st century A.D. The head and arms are missing, but the figure is probably rightly called a statue of Cybele; and from it her name has been conjecturally given to this temple. Augustus in the *Monumentum Ancyranum* records *ÆDEM. MATRIS. MAGNÆ. IN. PALATIO. FECI*; but it is more probable that his temple to Cybele formed part of the magnificent group of buildings in the area of Apollo (see below). Some interesting early

architectural fragments are lying near this temple; they consist of drums and capitals of Corinthian columns, and part of the cornice of the pediment, cut in peperino, and thickly coated with hard white stucco to imitate marble. Between this and the temple (so called) of Jupiter Victor are extensive remains of a large sort of porticus, with tufa walls and travertine piers, also republican in date. The use and name of this building are unknown. The temple of Jupiter Stator, traditionally vowed by Romulus during Temple his repulse by the Sabines (Liv., i. 12), stood near the Porta of Jupiter Mugonius, and therefore near the road leading up to the Palatine ter *Sacra Via*.⁵ This has been identified with the ruined concrete tor. podium (40 in fig. 17), the position of which suits the above indications; but the admixture of travertine, brick, and even marble with the tufa of the concrete shows that no trace here remains of any early building. On the tufa blocks of a shaft leading down to a large drain by the side of these remains are incised in large letters—

FILOCRATE DIOCLÆTE

—possibly the names of Greek stone-masons (Diocles, Philocrates); the form of the letters shows that this inscription is as early as the 2d or even 3d century B.C.

Remains of extensive lines of buildings in early opus reticulatum exist on the upper slopes of the Palatine, all along the Velabrum side, and on the south-west side as far as the so-called *Domus Gelotiana*. These buildings are constructed on the ruins of the wall of Romulus, a great part of which has been cut away to make room for them; their base is at the foot of the ancient wall, on the shelf cut midway in the side of the hill; their top reached originally above the upper level of the summit. They are of various dates and cannot be identified with any known buildings. Part is apparently of the time of the emperor Tiberius, and no doubt belongs Tiberius to the *Domus Tiberiana* mentioned by Suetonius (*Tib.*, 5; comp. *ana. Tac.*, *Hist.*, i. 27, and iii. 71); this palace covered a great part of the west corner of the hill. Of about the same date is a very House of interesting and well-preserved private house built wholly of opus *Livia*. reticulatum; it is usually called the house of Livia. It has a small atrium, out of which open the triclinium and the tablinum with a room (*ala*) on each side, all handsomely decorated with good paintings of mythological and domestic scenes, probably the work of Greek artists, as inscriptions in Greek occur,—e.g., *ΕΡΜΗC*, under the figure of Hermes, in a picture representing his deliverance of Io from Argus.⁶ The back part of this house was three stories high, and is divided into a great number of very small rooms, mostly bedrooms. The house is built in a sort of hole against the side of an elevation, so that the upper floor behind is level with an ancient paved road. The dampness caused by this is counteracted and kept off the paintings by a lining of flange-tiles over the external walls, under the stucco, thus forming an air-cavity all over the surface. From the back of the house, at the upper level, a long subterranean passage leads towards the Flavian palace, and then, turning at right angles and passing by the foundations of the so-called temple of Jupiter Victor, issues in the ancient tufa building mentioned above (20 in fig. 17). Another crypto-porticus starts near this house and communicates with the long semi-subterranean passage by which the palaces of Caligula and Domitian are connected (19 in fig. 17). It is ornamented with very beautiful stucco reliefs of cupids, beasts, and foliage, once painted and gilt. This private house is probably that of Germanicus, into which the soldiers who killed Caligula in the long crypto-porticus escaped, as described by Josephus (*Ant. Jud.*, xix. 1; see also Suet., *Cal.*, 58). Some inscribed lead pipes were found in this house; some pieces bear the inscription *IVLIAE. AVG.*, probably the daughter of Titus.

The palace of Augustus and the *Area Apollinis*⁷ occupied a great Palace of portion of the central part of the Palatine (see 47 and 48 in fig. Augustus 17); the splendour of its architecture and the countless works of art in gold, silver, ivory, bronze, and marble, mostly the production of the best Greek artists, which adorned this magnificent group of buildings must have made it the chief glory of this splendid city. It was approached from a road leading out of the *Summa Sacra Via* along the line of the present *Via di S. Bonaventura*; the entrance, probably the *Arcus* of Pliny (*H.N.*, xxxvi. 4, 10), led through lofty propylæa into a very extensive peristyle or porticus, with (at least) fifty-two fluted columns of Numidian giallo; the rest was of white Luna and Athenian marble. In the centre of this enclosure stood the great octostyle peripteral temple of Apollo Palatinus, so called to distinguish it from another temple of Apollo outside the *Porta Carmentalis*, remains of which exist

¹ See Brizio, *Ann. Inst.*, 1872, p. 309; Henzen, *Bull. Inst.*, 1872, p. 81; and Jordan, *Marsyas auf dem Forum*, Berlin, 1883.

² It is probable that these occupy the line of the *Tabernæ Veteres*.

³ *Authorities on the Forum*.—Nichols, *Roman Forum*, London, 1877 (very useful from its collection of passages in ancient authors); Jordan, *Capitol. Forum*, etc., Berlin, 1881, and *Topographie Roma*, vol. i., 1878; Nibby, *Il Foro Romano*, 1819; Angelini and Fea, *Il Foro Romano*, 1887; Tocco, *Ripristinazione del Foro*, 1858; Ravioli and Montiroli, *Foro Romano*, 1859; Michelet, *Das Forum Romanum*, Berlin, 1877; Marucchi, *Il Foro Romano*, 1881; Dutert, *Le Forum Romain*, Paris, 1876 (very handsomely illustrated, but more fanciful than trustworthy); Canina, *Il Foro Romano*, 1845 (open to the same criticism as the work of Dutert, and wholly supplanted by later discoveries). For inscriptions found in the Forum, see Jordan, "Sylogos Inscript. Fori Rom." in the *Ephem. Epigraph.*, iii. p. 248 sq. Some of the more recent excavations are described by Lanciani, "Scavi del Foro," in *Notizie degli Scavi* for 1882.

⁴ Many masons' marks exist on the tufa blocks of the most primitive buildings near the *Scalæ Caci* (see fig. 10).

⁵ Dionys., ii. 50; see also Plut., *Cic.*, 16; Ov., *Fast.*, vi. 793, and *Trist.*, iii. 127. Near this temple, and also near the *Porta Mugonia*, was the house of Tiberius Friscus (Liv., i. 41; Sol., *Polyhist.*, i. 24). Owing to the strength of its position this temple was more than once selected during troubled times as a safe meeting-place for the Senate; it was here, as being a "locus munitionis," that Cicero delivered his *First Catiline Oration* (see Cic., *In Cat.*, i. 1).

Augustus sold eighty silver statues of himself and with the money "offered golden gifts" to this temple, dedicating them both in his own name and in the names of the original donors of the statues.³ The Sibylline books were preserved under the statue of Apollo

(Suet., *Aug.*, 31); and within the cella were vases, tripods, and statues of gold and silver, with a collection of engraved gems dedicated by Marcellus (see Plin., *H.N.*, xxxvii. 5). On each side of the porticus was a large library, one Latin and the other Greek; ⁴ and a third side of the great enclosure was occupied by a large hall where the Senate occasionally met (Tac., *Ann.*, ii. 37), in the centre

of which stood a bronze colossus of Augustus,¹ 50 feet high (Plin., *H.N.*, xxxiv. 18). Round the porticus, between the Numidian marble columns, were statues of the fifty Danaids, and opposite them their fifty bridegrooms on horseback (see schol. on Pers., ii. 56), many fragments of which have been found. In the centre before the steps of the temple stood an altar surrounded by four oxen, the work of Myron (Proper., *El.*, ii. 3, 7). Within the same area was a small temple of Vesta (*C.I.L.*, i. p. 392), dedicated on 28th April 12 B.C., when Augustus was elected pontifex maximus;² the sacred block or altar symbolically called Roma Quadrata, surrounded by a circular trench called the Mundus, was also in some part of this great group of buildings. On the side towards the Circus Maximus was the palace of Augustus, which was excavated in 1775, and drawings of which were published by Guattani.³ A great part shown by him has since then been destroyed, and all is now concealed; the plan (48 in fig. 17) is taken from Guattani. The whole group is described by Ovid (*Trist.*, iii. 1). Augustus also rebuilt the temple of Victory,⁴ which gave its name to the Clivus Victoriae; this temple stood on the site of a prehistoric altar (Dionys., i. 32), and was more than once rebuilt,—e.g., by L. Postumius, 294 B.C. (Liv., x. 33). In 193 B.C. an aedule to Victory was built near it by Porcius Cato (Liv., xxxv. 9). Remains of the temple and a dedicatory inscription were found in 1725-28⁵ not far from the church of S. Maria Liberatrice; the temple was of Parian marble, with Corinthian columns of Numidian giallo antico. The Area Apollinis and its group of buildings suffered in the fire of Nero, and were restored by Domitian. The whole was finally destroyed in the great fire of 363 (Ammian, xxiii. 8), but the Sibylline books were saved.

Temple
of
Victory.

Palace of
Caligula.

The palace of Caligula occupies the northern angle of the Palatine, and extends over the Clivus Victoriae a long way towards the Clivus Palatinus (see fig. 17). This part of the Palatine was once occupied by the Lucus Vestæ, with the Sacellum Volupiae and many fine private houses. Among these were the dwellings of Q. Lutatius Catulus, Q. Hortensius, Catiline, Scaurus, Crassus (Plin., *H.N.*, xxxvi. 3, 24), whose house was afterwards bought by Cicero,⁶ and the house of Clodius, the view of which Cicero threatened to block out.⁷ Many other wealthy Romans had houses on this part of the Palatine, so that the cost of the site for Caligula's enormous palace must have been very great. The part now existing is little more than the gigantic substructures built to raise the principal rooms to the level of the top of the hill. The lowest parts of these face the Nova Via, opposite the Atrium Vestæ, and many stories of small vaulted rooms built in mixed brick and opus reticulatum rise one above the other to the higher levels.⁸ The palace extends over the Clivus Victoriae, supported on lofty arches so as to leave the road unblocked; many travertine or marble stairs lead to the upper rooms, some starting from the Nova Via, others from the Clivus Victoriae. Its enormous extent is referred to by Pliny (*H.N.*, xxxvi. 24). A large proportion of these substructures consist of dark rooms, some with no means of lighting, others with scanty borrowed light. Many small rooms and stairs scarcely 2 feet wide can only have been used by slaves. The ground floors on the Nova Via and the Clivus Victoriae appear to have been shops, judging from their wide openings, with travertine sills, grooved for the wooden fronts with narrow doors, which Roman shops seem always to have had,—very like those now used in the East. The upper and principal rooms were once richly decorated with marble linings, columns, and mosaics; but little of these now remains. By the side of the Clivus Victoriae still exists the start of the bridge by which Caligula joined the Capitolium to the Palatium (Suet., *Cal.*, 22); it is partly supported on corbelled arches, richly decorated with delicate stucco reliefs; the floor is of mosaic, and a piece of the open marble screen or balustrade is still *in situ*. The intermediate parts of Caligula's bridge were removed after his death, and the exit from the palace is blocked by a brick-faced wall, very little later in date than the palace itself. Near the bridge are some rooms very handsomely ornamented with a combination of coloured stucco reliefs and painting on the flat. The upper part of the palace, that above the Clivus Victoriae, is faced wholly with brickwork, no opus reticulatum being used, as in the lower portions by the

Nova Via. This possibly marks a difference of date, and the occurrence of brick stamps of the latter part of the 1st century A.D. in various parts of the palace shows that a large portion of it is later than the time of Caligula.

The next great addition to the buildings of the Palatine was the Flavian magnificent suite of state apartments built by Domitian, over a Palace. deep natural valley running across the hill (see fig. 17). The valley was filled up and the level of the new palace raised to a considerable height above the natural soil. Remains of a house, decorated with painting and rich marbles, exist under Domitian's peristyle, partly destroyed by the foundations of east concrete which cut right through it. The floor of this house shows the original level, far below that of the Flavian palace. The south angle of this great building adjoins the palace of Augustus, and it is connected with the palace of Caligula by a branch subterranean passage leading into the earlier crypto-porticus. These two buildings continued to be used as the private apartments of the emperor, the Flavian block consisting only of state rooms; the words *ÆDES PVBLICA* were inscribed upon it by Nerva to show its public character. It consists of a large open peristyle, with columns of Oriental marble, at one end of which is the grand triclinium with magnificent paving of opus sectile in red and green basalt and coloured marbles, a piece of which is well preserved; next to the triclinium, on to which it opens with large windows, is a nymphaeum or room with marble-lined fountain and recesses for plants and statues. On the opposite side of the peristyle is a large throne-room, the walls of which were adorned with rows of pavonazetto and giallo columns and large marble niches, in which were colossal statues of porphyry and basalt; at one side of this is the basilica, with central nave and apse and narrow aisles, over which were galleries. The apse, in which was the emperor's throne, is screened off by open marble cancelli, a part of which still exists. It is of great interest as showing the origin of the Christian basilica; S. Agnese fuori le Mura is exactly similar in arrangement (see *BASILICA*, vol. iii. p. 417).⁹ On the other side of the throne-room is the lararium, with altar and pedestal for a statue; next to this is the grand staircase, which led to the upper rooms, now destroyed. The whole building, both floor and walls, was covered with the richest Oriental marbles, including all the varieties mentioned on p. 808. Outside were colonnades or porticus,—on one side of cipollino, on the other of travertine, the latter stuccoed and painted. The magnificence of the whole, crowded with fine Greek sculpture and covered with polished marbles of the most brilliant colours, is difficult now to realize; a glowing description is given by Statius (*Silv.*, iv. 11, 18; see also Plut., *Poplic.*, 15, and Mart., viii. 36). Doors were arranged in the throne-room and basilica so that the emperor could slip out unobserved and reach by a staircase (30 in fig. 17) the crypto-porticus which communicates with Caligula's palace. The vault of this passage was covered with mosaic of mixed marble and glass, a few fragments of which still remain; its walls were lined with rich marbles; it was lighted by a series of windows in the springing of the vault. This, as well as the Flavian palace, appears to have suffered more than once from fire, and in many places important restorations of the time of Severus, and some as late as the 4th century, are evident. In 1720-26 extensive excavations were made here for the Farnese duke of Parma, and an immense quantity of statues and marble architectural fragments were discovered, many of which are now at Naples and elsewhere. Among them were sixteen beautiful fluted columns of pavonazetto and giallo, fragments of the porphyry statues, and an immense door-sill of Pentelic marble, now used for the high altar of the Pantheon; these all came from the throne-room. The excavations were carried on by Bianchini, who published a book on the subject.¹⁰

In the middle of the slopes of the Palatine, towards the Circus Domus Maximus, are considerable remains of buildings set against the Gelo-wall of Romulus and covering one of its projecting spurs. This tiana series of rooms with a long Corinthian colonnade has been supposed to be part of the Domus Gelotiana, from which Caligula used to watch the races in the circus below (Suet., *Cal.*, 18). Little, however, of the existing remains is as early as the reign of Caligula, and the marble porticus apparently dates from the time of Severus. The rooms were partly marble-lined and partly decorated with painted stucco, on which are incised a number of interesting inscriptions and rude drawings. Here, in 1857, was found the celebrated (so-called) caricature of the Crucified Christ, now in the Museo Kircheriano, but which, more probably, has a Gnostic meaning.¹¹ The inscription *CORINTHEVS . EXT . DE . PEDAGOGIO* suggests that this building was at one time used as a school, perhaps for the imperial slaves. A number of soldiers' names also occur, e.g., *HILARVS . MI . V . D . N.* (Hilarus miles veteranus domini nostri); some are in mixed Latin and Greek characters, with many

¹ The bronze head, now in the court of the Palazzo dei Conservatori, may possibly have belonged to this colossus; it is much too small for that of Nero, to which it has generally been attributed; it seems, however, of inferior workmanship to that of the Augustan age.

² Ovid (*Fast.*, iv. 949) mentions this group as being divided among three gods, namely, Phœbus, Vesta, and Augustus (comp. *Metam.*, xv. 864). The plan of a circular temple drawn by Lagorio (*Cod. Ursin. Vat.*, 3439, fol. 25) probably represents this temple of Vesta as discovered in the 16th century; it is reproduced in *Bull. Comm. Arch. Roma*, 1883, pl. xvii.

³ *Mon. Ant. ined. di Roma*, 1785, p. 56.

⁴ This temple is shown on a rare bronze medallion of Gordianus III.; it is domed, and on the pediment is inscribed *NEIKH OΠAΘΦOPOΣ*. See Grueber, *Roman Medallions*, pl. xlii., London, 1874.

⁵ See Bianchini, *Pal. dei Cesari*, 1738, p. 236.

⁶ Cic., *Pro Domo*, 43; Val. Max., vi. 3, 1; and see Becker, *Handb.*, i. p. 423.

⁷ Cic., *De Harusp.*, 15, 33.

⁸ At this point the Palatine is cut away into four stages like gigantic steps; the lowest is the floor of the Atrium Vestæ, the second the Nova Via, the third the Clivus Victoriae, and the top of the hill forms the fourth.

⁹ The brick stamps on the tiles laid under the marble paving of the basilica have *CN . DOMITI . AMANDI . VALEAT . QVI . FDCIT*.—the last three words a common arguement of good luck stamped on bricks or amphore; these date from a restoration after a fire in the time of Severus.

¹⁰ *Pal. dei Cesari*, Verona, 1738; see Guattani, *Not. di Antich.*, 1798.

¹¹ See Kraus, *Das Spottwörterbuch vom Palatin*, Freiburg, 1872, and Becker, *Das Spottwörterbuch*, &c., Breslau, 1866.

varieties of mis-spelling. After one pair of names is inscribed PERREG, showing that they belonged to the foreign corps called Peregrini, probably stationed here as guards to the imperial residences on the hill above. Most of these inscriptions appear to be as early as the 1st century A.D.¹ These interesting graffiti have in great part perished during the last few years, and soon none will remain.

Stadium. The great stadium of the Palatine (see 50 in fig. 17) was begun by Domitian, mainly built by Hadrian, and much altered or restored by Severus. The greater part of the outer walls and the large exedra or apse at the side, with upper floor for the emperor's seat, are of the time of Hadrian, as is shown by the brick stamps, and the character of the brick facing, which much resembles that of the Flavian time (bricks $1\frac{1}{2}$ inches and joints $\frac{1}{2}$ inch thick).² The stadium is surrounded with a colonnade of engaged shafts, forming a sort of aisle with gallery over it. Except those at the curved end, which are of Hadrian's time, these piers are of the time of Severus, as are also all the flat piers along the outer wall,—one opposite each of those in the inner line. This shows either that the stadium must have been left by Hadrian in an unfinished state, or else that it suffered seriously from a fire or earthquake before the reign of Severus.

Hadrian's palace. In addition to the stadium, Hadrian built a number of very handsome rooms, forming a palace on the south-east side and at the south-west end of the stadium. These rooms were partly destroyed and partly hidden by the later palace of Severus, the foundations of which in many places cut through and render useless the highly decorated rooms of Hadrian (53 in fig. 17). The finest of these which is now visible is a room with a large window opening into the stadium near the south angle; it has intersecting barrel vaults, with deep coffers, richly ornamented in stucco. The oval structure shown in the plan (50 in fig. 17), with other still later additions, belongs to the 4th or 5th century, when the stadium was no longer used for races; some of the walls, of opus mixtum, which cut up and disfigure this noble building appear to be the work of Theodoric, c. 500.

Palace of Severus. The palace of Septimius Severus was very extensive and of enormous height; it extends not only all over the south angle of the Palatine but also a long way into the valley of the Circus Maximus and towards the Cœlian. This part (like Caligula's palace) is carried on very lofty arched substructures, so as to form a level, uniform with the top of the hill, on which the grand apartments stood. The whole height from the base of the Palatine to several stories above its summit must have been enormous. Little now remains of the highest stories, except part of a grand staircase which led to them. Extensive baths, all richly decorated with marble linings and mosaics in glass and marble, cover a great part of the top of the hill. These and other parts of the Palatine were supplied with water by an aqueduct built by Nero in continuation of the Claudian aqueduct, some arches of which still exist on the slope of the Palatine (56 in fig. 17; see Spart., *Sept. Sev.*, 24). The palace of Severus was restored and enlarged by Heliogabalus and Severus Alexander.³ One of the main roads up to the Palatine passes under the arched substructures of Severus, and near this, at the foot of the hill, at the south angle, Septimius Severus built an outlying part of his palace, a building of great splendour dedicated to the Sun and Moon, called the Septizonium, probably from its seven stories or zonæ (see Jordan, *Bull. Inst.*, 1872, p. 145). It has been doubted whether it can really have been as much as seven stories high; but this is not improbable when we consider the enormous height of the rest of Severus's palace, reaching from the foot of the Palatine to far above its summit. Part of the Septizonium existed as late as the reign of Sixtus V. (1585-90), who destroyed it in order to use its marble decorations and columns in the new basilica of St Peter; drawings of it are given by Du Perac, *Vestigi di Roma*, 1575, and in other works of that century.⁴

Velia and Germalus. The Velia and Germalus were two outlying spurs of the Palatine.⁵ Owing to the great alterations that have been made in the contour of the hill it is now very difficult to identify these ancient districts (see *Ann. Inst.*, 1865, p. 347). The Germalus or Cermalus was probably on the side towards the Velabrum, while the Velia may be identified with that elevated ground between the Palatine and the Esquiline on which the temple of Venus and Rome and the arch of Titus now stand. It is evident that this was once much loftier and more abrupt than it is now; a great part of it was cut away when the level platform for the temple of Venus and Rome

was formed. The foundations of part of Nero's palace along the road between this temple and the Esquiline are exposed for about 20 to 30 feet in height, showing a corresponding lowering of the level here, and the bare tufa rock, cut to a flat surface, is visible on the site of Hadrian's great temple; that the Velia was once much loftier is also indicated by the story of the removal of Valerius Publicola's dwelling.⁶

On the Velia and the adjoining Summa Sacra Via were two Sacra temples which Augustus rebuilt.⁷ The "Ædes Larum" is probably Via. the "Sacellum Larum" mentioned by Tacitus (*Ann.*, xii. 24) as one of the points in the line of the pomerium of Roma Quadrata. The Sacra Via started at the Sacellum Streniæ, an unknown point on the Esquiline, probably near the baths of Titus (Varro, *L.L.*, v. 47), in the quarter called Cerolia. Thence it probably (in later times) passed round part of the Colosseum to the slope leading up to the arch of Titus on the Velia; this piece of its course is lined on one side by extensive baths, attributed to Heliogabalus (45 in fig. 17), and farther back, against the cliff of the Palatine, are remains of Nero's enormous palace (see 42 in fig. 17). From the arch of Titus or Summa Sacra Via the original line of the road has been altered (see Plate VIII.); the angle at which the scanty remains of the Regia are set probably shows the early direction of the Sacra Via in passing on to the temple of Vesta. Its later course was more to the north-east, passing at a sharp angle from the arch of Titus to the front of Constantine's basilica, and on past the temple of Faustina. It is uncertain whether the continuation of this road to the arch of Severus was in later times called the Sacra Via or whether it rejoined its old line along the Basilica Julia by the cross-road in front of the Ædes Julii. Its original line past the temple of Vesta was completely built over in the 3d and 4th centuries, and clumsily-fitted pavements of marble and travertine occupy the place of the old basalt blocks.⁸ The course of the Nova Via⁹ (see figs. 16 and 17) along the palace of Caligula¹⁰ was Nova exposed in 1882-84. According to Varro (*L.L.*, vi. 59) it was a Via. very old road. It led up from the Velabrum, probably winding along the slope of the Palatine, round the north angle under the church of S. Maria Liberatrice. The rest of its course, gently ascending towards the arch of Titus, is now exposed, as are also the stairs, possibly the Scalæ Anulariæ, which connected it with the Clivus Victoriarum at the Porta Romanula; a continuation of these stairs, still unexcavated, led down to the Forum.¹¹

The extent of the once marshy Velabrum (Gk., *Félos*) is not Velabrum known, though part of its site is indicated by the church of S. brum. Giorgio in Velabro; Varro (*L.L.*, vi. 24) says, "extra urbem antiquum fuit, non longe a porta Romanula." It was a district full of shops (Plaut., *Capt.*, iii. 1, 29; Hor., *Sat.*, ii. 3, 229). The Vicus Tuscus on its course from the Forum to the Circus skirted the Velabrum (Dionys., v. 26), from which the goldsmiths' arch was an entrance into the Forum Boarium (comp. Dionys., i. 40).

Capitoline Hill.

The Capitoline Hill, once called Mons Saturnius (Varro, *L.L.*, v. 42), consists of two peaks, the Capitolium and the Arx,¹² with an intermediate valley (Asylum). The older name of the Capitolium was Mons Tarpeius (Varro, *L.L.*, v. 41). Livy (i. 10) mentions the founding of a shrine to Jupiter Feretrius on the Temple Capitolium by Romulus;¹³ this summit was afterwards occupied of by the great triple temple dedicated to Jupiter, Juno, and Minerva, Jupiter a triad of deities worshipped under the names of Tinia, Thalna, Capitol- and Menrva in every Etruscan city. This great temple was (Liv., i. 38, 53) founded by Tarquin I., built by his son Tarquin II., and dedicated by M. Horatius Pulvillus, consul suffectus in 509 B.C.¹⁴ It was built in the Etruscan style, of peperino stuccoed and painted (Vit., iii. 3), with wooden architraves, wide intercolumniations, and painted terra-cotta statues.¹⁵ It was rebuilt many times; the original temple lasted till it was burnt in 83 B.C.; it was then re-founded in marble by Sulla, with Corinthian columns stolen from the temple of Olympian Zeus in Athens (Plin., xxxvi. 5), and was completed and dedicated by Q. Lut. Catulus, whose name appeared on the front. Augustus, in spite of his having carried out part of the work, did not introduce his name by the side of that of Catulus. It was again burnt by the Vitellian rioters in 70 A.D., and rebuilt by Vespasian in 71.¹⁶ Lastly, it was burnt in the three days' fire

¹ See Henzen, in the *Bull. Inst.*, 1863, p. 72, and 1867, p. 118.

² In parts of the outer wall brick stamps of the Flavian period appear, e.g., FLAVI. AVG. L. CLONIVS—[A brick] of Clonius, freedman of the Flavian Augustus.

of Titus's reign¹ and rebuilt with columns of Pentelic marble by Domitian; the gilding alone of this last rebuilding is said to have cost 24 millions sterling (Plut., *Publ.*, 15). There has been much controversy as to the site of this temple and that of Juno Moneta on the Arx; but there is an overwhelming mass of evidence to show that the Capitolium is the peak where the Palazzo Caffarelli stands, and that the church of Ara Coeli occupies the Arx. Livy (xxxv. 21) mentions the fall of a mass of rock from the Capitolium into the Vicus Jugarius, which passes close under the Caffarelli summit, and is not near the opposite peak. Moreover, extensive substructions of tufa and peperino have been exposed on the eastern peak, the form of which appears to fit this nearly square triple temple, and in 1875 a fragment of a fluted column was found, of such great size that it could only have belonged to the temple of Jupiter. Its actual limits have not been, clearly made out, and therefore the truth of Dionysius's description (iv. 61) cannot be proved.² The temple is represented on many coins, both republican and imperial; these show that the central cella was that of Jupiter, that of Minerva on his right, and of Juno on his left. The door was covered with gold reliefs, which were stolen by Stilicho (c. 390; Zosim., v. 38), and the gilt bronze tiles (Plin., xxxiii. 18) on the roof were partly stripped off by Genseric in 455 (Procop., *De Bell. Vand.*, i. 5), and the rest by Pope Honorius I. in 630 (Marliano, *Topogr.*, ii. 1). Till 1348, when the steps up to Ara Coeli were built, there was no access to the Capitol from the back; hence the three ascents to it mentioned by Livy (iii. 7, v. 26-28) and Tacitus (*Hist.*, iii. 71-72) were all from the inside of the Servian circuit. Even on this inner side it was defended by a wall, the gates in which are called "Capitolii fores" by Tacitus. Part of the outer wall at the top of the tufa rock, which is cut into a smooth cliff, is visible from the modern Vicolo della Rupe Tarpeia; this cliff is traditionally called the Tarpeian rock, but that must have been on the other side towards the Forum, from whence it was visible, as is clearly stated by Dionysius (vii. 35, viii. 78).³ Another piece of the ancient wall has recently been exposed, about half-way up the slope from the Forum to the Arx. It is built of soft yellow tufa blocks, five courses of which still remain in the existing fragment. The large temple of Juno Moneta ("the Adviser") on the Arx, built by Camillus in 384 B.C., was used as the mint; hence *moneta* = "money" (Liv., vi. 20).

A large number of other temples and smaller shrines stood on the Capitoline Hill, a word used broadly to include both the Capitolium and the Arx.⁴ Among these were the temple of Honos and Virtus, built by Marius, and the temple of Fides, founded by Numa, and rebuilt during the First Punic War. Both these were large enough to hold meetings of the Senate. The temple of Jupiter Tonans⁵ was built by Augustus (Suet., *Aug.*, 29), near the great temple of Jupiter. Other shrines existed to Venus Victrix, Ops, Jupiter Custos, and Concord—the last under the Arx (Liv., xxii. 33)—and many others, as well as a triumphal arch in honour of Nero, and a crowd of statues and other works of art (see Plin., *H.N.*, xxxiii. 4; xxxiv. 17, 18, 19; xxxv. 36, 45; xxxvi. 5, 8), so that the whole hill must have been a mass of architectural and artistic magnificence, the spoils of the whole Hellenic world.

The so-called Tabularium occupies the central part of the side towards the Forum; it is set on the tufa rock, which is cut away to receive its lower story. It derives its name from an inscription found there in the 15th century, quoted by Poggio (see Gruter, *Inscr.*, 170, 6); but that name was given to many buildings in Rome (Liv., iii. 55, xliii. 16), and there is no reason to suppose that this specially was known as the Tabularium (comp. Virg., *Geor.*, ii. 501). Catulus, who was also the dedicatory of the great temple of Jupiter (Tac., *Hist.*, iii. 72; Dion Cass., xliii. 14), was consul in 78 B.C., but part of this building is probably much earlier in date. Its outer walls are of peperino, its inner ones of tufa or concrete; the Doric arcade has capitals and architrave of travertine.⁶ A road paved with basalt passes through the building along this arcade, entered at one end from the Clivus Capitolinus, and at the other probably from the Gradus Monetae, a flight of steps leading from the temple of Concord and the Forum up to the temple of Juno Moneta on the Arx (see Plate VIII.). The entrance

from the Clivus Capitolinus is by a wide flat arch of peperino most beautifully jointed; the other end wall has been mostly destroyed. The back of this building overlooked the Asylum or depression between the two peaks. From this higher level a long steep staircase of sixty-four steps descends towards the Forum; the doorway at the foot of these stairs has a flat arch, with a circular relieving arch over it; it was completely blocked up by the temple of Vespasian (see fig. 1). This was probably the door where the Vitellian rioters broke into the Capitolium (Tac., *Hist.*, iii. 71).⁷ Great damage was done to this building by the additions of Boniface VIII. and Nicholas V., as well as by its being used as a salt store, by which the walls were much corroded.⁸

The Imperial Fora.

The Forum Julium (see fig. 18), with its central temple of Venus Genetrix, was begun in 49 B.C. after the battle of Pharsalia by Julius and completed by Augustus.⁹ Being built on a crowded site it was somewhat cramped, and the ground cost nearly a hundred million sesterces.¹⁰ Part of its circuit wall, with remains of five arches, exists in the Via Marmorella; and behind is a row of small vaulted rooms, probably shops or offices.¹¹ The arches are flat, slightly cambered, with travertine springers and keys; the rest, with the circular relieving arch over, is of tufa; it was once lined with slabs of marble, the holes for which exist. Foundations of the circuit wall exist under the houses towards S. Adriano, but the whole plan has not been made out. Palladio (*Arch.*, iv. 31) describes excavations made here, and the discovery of remains of a fine temple, probably that of Venus Genetrix.¹²

The forum of Augustus (see fig. 18) adjoined that of Julius on Forum of its north-east side; it contains the temple of Mars Ultor, built to Augustus.

FIG. 18.—Plan of fora of Julius, Augustus, and Nerva.

commemorate the vengeance taken on Caesar's murderers at Philippi, 42 B.C. (Ov., *Fast.*, v. 575 sq.).¹³ It was surrounded with a massive

¹ Suet., *Dom.*, 5; Dion Cass., lxxvi. 24.

² See *Bull. Comm. Arch.*, iii. 1875, p. 165; *Mon. Inst.*, v. pl. xxxvi, x. pl. xxxa; Hirt, "Der Capit. Jupiter Tempel," in *Abhandl. der Berl. Akad.*, 1873; Niebuhr, *Röm. Gesch.*, i. 55-58; Bunsen, *Gesch.*, iii. 5-14; Becker, *Handb.*, i. p. 387. See also *Ann. Inst.*, 1851, p. 289, for a relief showing the sculpture in the pediment; the front of the temple is shown in one of the reliefs from the arch of M. Aurelius, now in the Capitoline Museum.

³ See Dureau, *La Roche Tarpeienne*, Paris, 1816; a graceful account of the legend of Tarpeia is given by Propertius, *Eleg.*, iv. 4.

⁴ A structure of great sanctity, dating from prehistoric Etruscan times, was the Auguraculum, an elevated platform upon the Arx, from which the signs in the heavens were observed by the augurs (see Festus, ed. Muller, p. 18). This was moved under the empire to the Palatine (see *Notitia*, &c.), probably by Augustus.

⁵ What are probably its foundations have been found near the substructures of the great temple (*Bull. Comm. Arch. Rom.*, 1875, iii. p. 165 sq.). It is mentioned in the list of the *Mon. Ancy.*

⁶ The whole of the frieze and cornice is missing; it is usually supposed that there was once another story above this entablature, but there is no evidence of that except Poggio's statement.

⁷ Mommsen (*Ann. Inst.*, 1858, p. 211) comes to the conclusion that this building is the *Erarium Saturni*, but that seems hardly possible, as there is the clearest evidence that that *erarium* was in or part of the temple of Saturn (see *ante*, p. 817).

⁸ The Porta Pandana ("ever-open gate") was probably situated near the south-west angle of the Tabularium, where the road of the Clivus Capitolinus entered the circuit wall of the Capitoline Hill. See Righetti, *Descriz. del Campidoglio*, 1888; Azzurri, *Antico Tabulario*, 1889; Supham, *De Capitolio Romano*, 1866; and Jordan, *Ann. Inst.*, 1881.

⁹ See *Mon. Ancy.* (quoted at p. 817, note 13, above); Plin., *H.N.*, xxxv. 45, xxvii. 24.

¹⁰ Ofg., *Ep. ad Ath.*, iv. 16; Suet., *Ces.*, 26.

¹¹ There is no foundation whatever for the theory that these chambers were part of the "Mamertine prison"; their form and position both make that impossible.

¹² See Dion Cass., xliii. 22; Appian, *Bell. Civ.*, ii. 102; Vitruv., iii. 3; Plut., *Ces.*, 60.

¹³ The Ancyran inscription records—IN. PRIVATO. SOLO. [EMPTO. MARTIS. ULTORIS. TEMPLVM. FORVMQVE. AVGVSTVM. EX. [MANI]BUS. FECL. See Suet., *Aug.*, 29, 56; Dion Cass., lvi. 27; Plin., *H.N.*

wall of peperino, nearly 100 feet high, with travertine string-courses and cornice; a large piece of this wall still exists, and is one of the most imposing relics of ancient Rome. Against it are remains of the temple of Mars, three columns of which, with their entablature and marble ceiling of the peristyle, are still standing; it is Corinthian in style, very richly decorated, and built of fine Luna marble. The cella is of peperino, lined with marble; and the lower part of the lofty circuit wall seems also to have been lined with marble on the inside of the forum. The large archway by the temple (Arco dei Pantani) is of travertine. Palladio (*Arch.*, iv.) and other writers of the 16th century give plans of the temple and circuit wall, showing much more than now exists. The temple, which was octastyle, with nine columns and a pilaster on the sides, occupied the centre, and on each side the circuit wall formed two large semicircular apses, decorated with tiers of niches for statues.¹

Forum
Pacis.

The Forum Pacis, built by Vespasian, was farther to the south-east; the only existing piece, a massive and lofty wall of mixed tufa and peperino, with a travertine archway, is opposite the end of the basilica of Constantine. The arch opened into what was probably the Templum Sacrae Urbis, which contained a plan of the city of Rome. The original plan was probably burnt with the whole group of buildings in this forum in 191, in the reign of Commodus (Dion Cass., lxxii. 24); but a new plan engraved on marble was made, and the building restored in concrete and brick by Severus. The north-east end wall, with the clamps for fixing the marble plan, still exists, as does also the other (restored) end wall with its arched windows towards the forum (see fig. 19); one

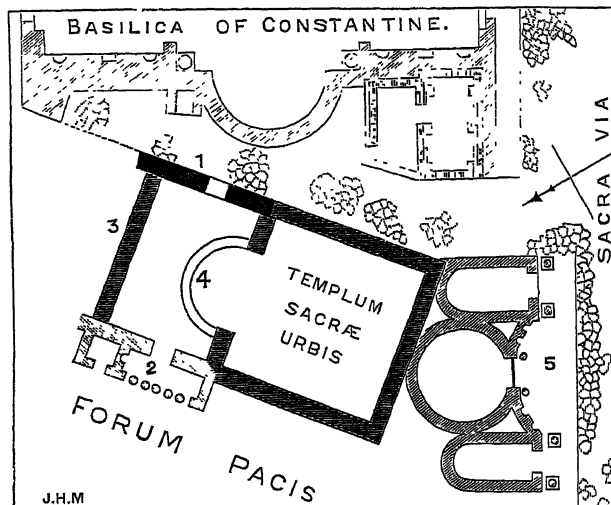

FIG. 19.—Group of buildings by the Forum Pacis. 1. Existing wall of peperino and tufa, with travertine doorway. 2. Do. and porch destroyed by Urban VIII. 3. Brick-faced wall of time of Severus against which the marble plan was fixed. 4. Apsel built by Felix IV., when he converted the Templum Sacrae Urbis into the church of SS. Cosmo e Damiano. 5. Temple of Romulus, built by Maxentius, made by Felix IV. into the porch of his church.

hundred and sixty-seven fragments of this plan were found c. 1560 at the foot of the wall to which they were fixed, and are now preserved in the Capitoline Museum; drawings of the seventy-four pieces now lost are preserved in the Vatican² (*Cod. Vat.*, 3439). The whole has been published in a valuable work by Professor Jordan, *Forma Urbis Romae*, Berlin, 1875-82. The fragments which relate to the Forum Magnum are given on Plate VIII. The circular building at the end facing on the Sacra Via is an addition built by Maxentius in honour of his deified son Romulus; like the other buildings of Maxentius, it was rededicated and inscribed with the name of his conqueror Constantine.³ The original stone building of Vespasian was probably an archive and record office; the name Templum Sacrae Urbis is with much probability given to it by Jordan, partly on the authority of an inscription now in the Vatican (see *Forma Urbis Romae*). The fine bronze doors at the entrance to the temple of Romulus are much earlier than the building itself, as are also the porphyry columns and very rich entablature which ornament this doorway. Pope Felix IV. (526-530)

xxxvi. 24, xxxv. 36, xxxiv. 18, vii. 53, where many fine Greek works of art are mentioned as being in the forum of Augustus.

¹ Those of Roman leaders and generals, from Aeneas and Romulus to Augustus. See Borsari, *Foro di Augusto*, &c. (Lincei), 1884.

² An interesting description of this discovery is given by Vacca, writing in 1594 (printed in Nardini, *Roma Ant.*, ed. Nibby, 1818-20, vol. iv.); since then a few other fragments have been found. The scale is roughly 1 to 500, but appears to be not quite uniform.

³ For accounts of this interesting group of buildings, see De Rossi, *Bull. Arch. Crist.*, 1861, p. 62; Tredelenburg, *Ann. Inst.*, 1872, p. 66; and Lanciani, *Bull. Comm. Arch. Rom.*, 1882. Ligorio (in a 16th-century MS.; *Cod. Vat.*, 3439) and Du Perac (*Vestig.*) show much more than now exists.

made the double building into the church of SS. Cosmo e Damiano, using the circular domed temple of Romulus as a porch.⁴ The chief building of Vespasian's forum was the Templum Pacis,⁵ dedicated in 75, one of the most magnificent in Rome, which contained a very large collection of works of art.

The forum of Nerva (see fig. 18) occupied the narrow strip left Forum of between the fora of Augustus and Vespasian; being little more Nerva. than a richly decorated street, it was called the Forum Transitorium or Forum Palladium, from the temple to Minerva which it contained. It was begun by Domitian, and dedicated by Nerva in 97 (see Suet., *Dom.*, 5; Mart., *Ep.*, i. 2, 8). Like the other imperial fora, it was surrounded by a peperino wall, not only lined with marble but also decorated with rows of Corinthian columns supporting a rich entablature with sculptured frieze. Two columns and part of this wall still exist; on the frieze are reliefs of weaving, fulling, and various arts which were under the protection of Minerva. A great part of the temple existed till the time of Paul V., who in 1606 destroyed it to use the columns elsewhere.⁶ In the reign of Severus Alexander a series of colossal bronze statues, some equestrian, were set round this forum; they represented all the previous emperors who had been deified, and by each was a bronze column inscribed with his "res gestae" (Lamprid., *Hist. Aug.*: *Sev. Alex.*, 28).

The forum of Trajan with its adjacent buildings was the last and, Forum of at least in size, the most magnificent of all; it was in progress from Trajan. 100 to 117. A great spur of hill, which connected the Capitoline with the Quirinal, was cut away to make a level site for this enormous group of buildings. It consisted (see fig. 20) of a large dipteral

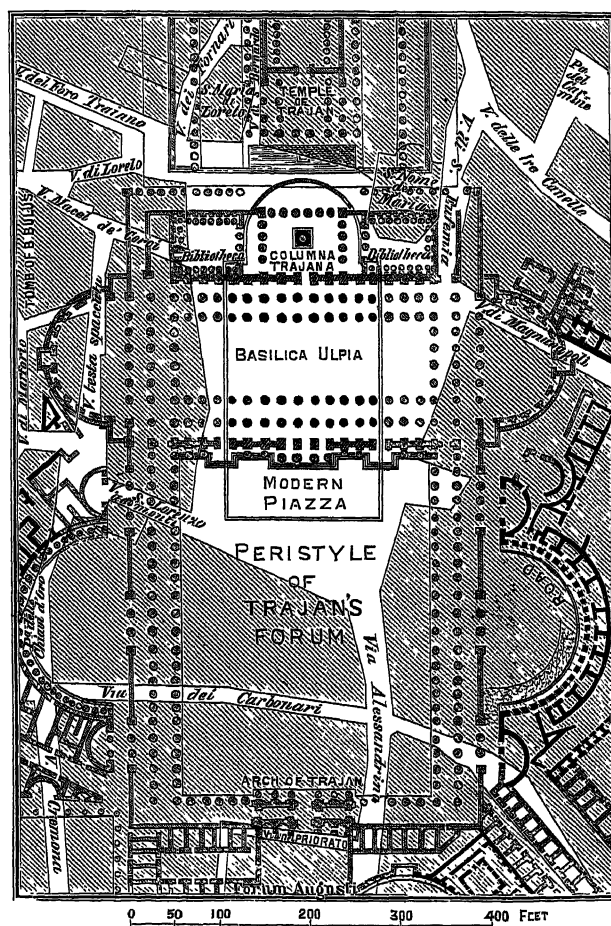

FIG. 20.—Forum of Trajan.

peristyle, with curved projections, lined with shops on the side. That against the slope of the Quirinal, three stories high, still partly exists. The main entrance was through a triumphal arch (Dion Cass., lxxviii. 29), from which probably were taken most of the fine reliefs used by Constantine to decorate his arch. Aurei of Trajan show this arch and other parts of his forum.⁷ The opposite

⁴ "Hic (Felix) fecit basilicam SS. Cosmae et Damiani . . . in Via Sacra, juxta Templum Urbis Romae" (Anastas. Bibl., *Vita S. Felicis IV.*),—important evidence in favour of Jordan's suggestion.

⁵ Statues by Phidias and Lysippus existed in the Forum Pacis as late as the 6th century (Procop., *Bell. Goth.*, iv. 21).

⁶ Drawings of it are given in Du Perac and by Palladio (*Arch.*, iv. 8).

⁷ See Aul. Gell., xiii. 25, 2; and Amm. Marc., xvi. 10.

side was occupied by the Basilica Ulpia (Jordan, *For. Ur. Rom.*), part of which, with the column of Trajan, is now visible; none of the columns, which are of grey granite, are *in situ*, and the whole restoration is misleading. Part of the rich paving in Oriental marble is genuine. This basilica contained two large libraries (Dion Cass., lxxviii. 16; Aul. Gell., xi. 17).

Trajan's column.

The Columna Cochlis (so called from its spiral stairs) is, including capital and base, 97 feet 9 inches high, *i.e.*, 100 Roman feet; its pedestal has reliefs of trophies of Dacian arms, and winged Victories, with an inscription recording the enormous mass of hill which was removed to form the site (comp. Dion Cass., lxxviii. 16). On the shaft are reliefs arranged spirally in twenty-three tiers, scenes of Trajan's victories, containing about 2500 figures. Trajan's ashes were buried in a gold urn under this column (Dion Cass., lxxviii. 16); and on the summit was a colossal gilt bronze statue of the emperor, now replaced by a poor figure of St Peter, set there by Sixtus V.² Beyond the column stood the temple of Trajan completed by Hadrian; its foundations exist under the buildings at the north-east side of the modern piazza, and many of its granite columns have been found. This temple is shown on coins of Hadrian.³ The architect of this magnificent group of buildings was Apollodorus of Damascus (Dion Cass., lxxix. 4), who also designed many buildings in Rome during Hadrian's reign.⁴ In addition to the five imperial fora, and the Forum Magnum, Olitorium, and Boarium, mentioned above, there were also smaller markets for pigs (Forum Suarium), bread (Forum Pistorium), and fish (Forum Piscarium), all of which, with some others, popularly but wrongly called fora, are given in the regionary catalogues.

Temple of Trajan.

Other Temples, &c.

Other temples.

Besides the temples mentioned in previous sections remains of many others still exist in Rome. The circular temple by the Tiber in the Forum Boarium, formerly thought to be that of Vesta, may be the temple of Hercules mentioned by Macrobius (*Saturm.*, iii. 6), Solinus (*Collect.*, i. 11), and Livy (x. 23). Its design is similar to that of the temple of Vesta in the Forum (fig. 15), and, except the entablature and upper part of the cella, which are gone, it is well preserved (see Piale, *Tempio di Vesta*, 1817). The neighbouring Ionic temple, popularly called of Fortuna Virilis, is of special interest from its early date, probably the end of the 2d century B.C. The complete absence of marble and the very sparing use of travertine, combined with the simple purity of its design, are all proofs of its great antiquity. It has a prostyle tetrastyle portico of travertine, and a short cella of tufa with engaged columns; the bases of these and of the angle columns are of travertine. The frieze has reliefs of ox skulls and garlands. The whole was originally stuccoed and painted so that the different stones used would not show. Fig. 21 gives the plan, showing the hard travertine used at the points of greatest pressure, while the main walls with the half columns are of Fig. 21.—So-called temple of Fortuna Virilis. The black shows tufa; the shading travertine.

The dedication of this temple is doubtful; on the whole it appears most probable that it is the temple to Fortuna (without any affix) founded by Servius Tullius (Dionys., iv. 27) in the Forum Boarium, not the one to Τύχη Ἀνδρεῖα (Fors Fortuna?) mentioned as being by the river (comp. Plut., *De Fort. Rom.*, 5). Ten columns of what is probably the temple of Ceres, Liber, and Libera exist *in situ*, built up in the end and side walls of the church of S. Maria in Cosmedin. These have well sculptured composite capitals and wide intercolumniation,—probably a survival of the original design of this temple, which was Tuscan in style (Vitr., iii. 3, 5; Plin., *H.N.*, xxxv. 45). It was founded by Aulus Postumius, dictator in 497 B.C., and dedicated by Spurius Cassius, consul in 494 B.C.

¹ Its pedestal is inscribed, "Senatus Populusque Romanus Imp. Caesaris Divi Nervæ F. Nervæ Trajano Aug. Germ. Dacico Pontif. Maximo Trib. Pot. XVII. [i.e., 114 A.D.] Imp. VI. P. ad declarandum quantæ altitudinis mons et locus tantis operibus sit egestus." This cannot be taken literally, as the ridge which was cut away never approached 100 feet in height, but possibly means that the cliff of the Quirinal was cut back to a slope reaching to a point 100 feet high (see Brocchi, *Stato di Roma*, p. 133; Becker, *Handb.*, note 787).

² See Fabretti, *Columna Trajana* (1883), who gives drawings of all the reliefs; also De Rossi, *Col. Traj. designata*. The reliefs, from their lofty position, are now difficult to see, but originally must have been very fairly visible from the galleries on the colonnades which once surrounded the column.

³ See Aul. Gell., xi. 17, 1; Spart., *Hist. Aug.*, *Hadr.*, 19; and compare Pausanias (v. 12, 6; x. 5, 11), who mentions the gilt bronze roofs of Trajan's forum.

⁴ See Fea, *Foro Trajano*, 1832; Richter, *Ristaurato del Foro Trajano*, 1839; Bartoli, *Col. Trajana*, 1704; Pistolesi, *Col. Trajana*, 1846; Froehner, *La Colonne Trajane*, Paris, 1865.

(Dionys., vi. 17, 94). In 31 B.C. it was burnt (Dion Cass., l. 10), and was rebuilt by Augustus and Tiberius (Tac., *Ann.*, ii. 49); but the existing columns belong to a still later restoration. The temple stands close to the carceres of the Circus Maximus, in the Forum Boarium. Within the walls of S. Niccolo in Carcere (see fig. 22) in the Forum Olitorium are preserved remains of the tufa cellæ and travertine columns of three small hexastyle peripteral temples, two Ionic and one Tuscan, set close side by side.⁵ A fragment of the marble plan includes part of this group, as is indicated on fig. 22.

Two of these temples were probably those to Spes and Juno Sospita (Liv., xxi. 62, xxxii. 30); the third may be that of Apollo Medicus (Liv., xl. 51), as suggested by Burn (*Rome and Campagna*, 1871, note i. p. 306). Near the Forum Olitorium, in the modern Ghetto, Carcere; the part within the line A, A is that shown on a fragment of the marble plan. The black shows what still exists.

FIG. 22.—Plan of three temples on site of S. Niccolo in modern Ghetto, Carcere; the part within the line A, A is that shown on a fragment of the marble plan. The black shows what still exists.

group of buildings included in the Porticus Octaviæ, two of which, dedicated to Juno Regina and Jupiter Stator, with part of the enclosing porticus and the adjoining temple of Hercules Musarum, are shown on a fragment of the marble plan. The Porticus Octaviæ, Porticus a large rectangular space enclosed by a double line of columns, was Octaviæ, built in honour of Octavia by her brother Augustus on the site of the Porticus Metelli, founded in 146 B.C. This must not be confounded with the neighbouring Porticus Octavia founded by Cn. Octavius, the conqueror of Perseus (Liv., xiv. 6, 42), in 168 B.C., and rebuilt under the same name by Augustus, as is recorded in the Ancyrean inscription. The whole group was one of the most magnificent in Rome, and contained a large number of works of art by Phidias and other Greek sculptors. The existing portico, which was the main entrance into the porticus, is a restoration of the time of Severus in 203. The church of S. Michele and the houses behind it conceal extensive remains of the porticus and its temples (see *Ann. Inst.*, 1868, p. 108; and Contiglozzi, *I Portici di Ottavia*, 1861).⁶

Remains of a large peripteral Corinthian temple are built into the side of the "Dogana di Terra," near Monte Citorio. Eleven of Temple marble columns and their rich entablature are still *in situ*, with the tune. corresponding part of the cella wall of peperino; in 1878 a piece of the end wall of the cella was discovered, and, under the houses near, part of a large peribolus wall, also of peperino, forming an enclosure with columns all round the temple nearly 330 feet square (see *Bull. Comm. Arch. Rom.*, vi. pl. iv., 1878). The dedication of this temple is not known; it has commonly been identified with the temple of Neptune (Dion Cass., lxvi. 24), built by Agrippa, and surrounded by the Porticus Argonautarum (Dion Cass., liii. 27; Mart. iii. 20, 11); but its details appear to be later than the reign of Augustus.⁷ Another not improbable theory is that it was the temple of Hadrian, mentioned in the *Mirabilia* (Uhlrichs, *Codex Topogr.*, Wurtzburg, 1871, p. 107) as being near this spot.

The temple of Venus Felix and Roma Æterna on the Velia (see Temple fig. 23) was the largest in Rome; it was pseudo-dipteral with ten of Venus Corinthian columns of Greek marble at the ends, and probably and twenty at the sides; it had an outer colonnade round the peribolus Rome. of about 180 columns of polished granite and porphyry. Of these only a few fragments now exist; for several centuries the whole area of this building was used as a quarry, while the residue of the marble was burnt into lime on the spot in kilns built of broken fragments of the porphyry columns. A considerable part of the two cellæ with their apses, set back to back, still exists; in each apse was a colossal seated figure of the deity, and along the side walls of the cellæ were rows of porphyry columns and statues in niches. The vault is deeply coffered with stucco enrichments once painted and gilt. The roof was covered with tiles of gilt bronze, which were taken by Pope Honorius I. (625-638) to cover the basilica of St Peter's. These were stolen by the Saracens during their sack of the Leonine city in 846. The emperor Hadrian himself designed this magnificent temple, which was partially completed

⁵ For drawings of them see *Ann. Inst.*, 1850, p. 347, and *Mon. Inst.*, v. 24; also Labacco, *Architettura*, 1857.

⁶ The remains of the Porticus Octaviæ are now being more completely exposed by the demolition of the Ghetto.

⁷ This, however, is not conclusive, as the temple of Neptune may have been completely rebuilt after the fire which injured it in 80.

in 135; the design was criticized rather severely by the architect Apollodorus (Dion Cass., lxi. 4; Spart., *Had.*, 19).¹ The temple

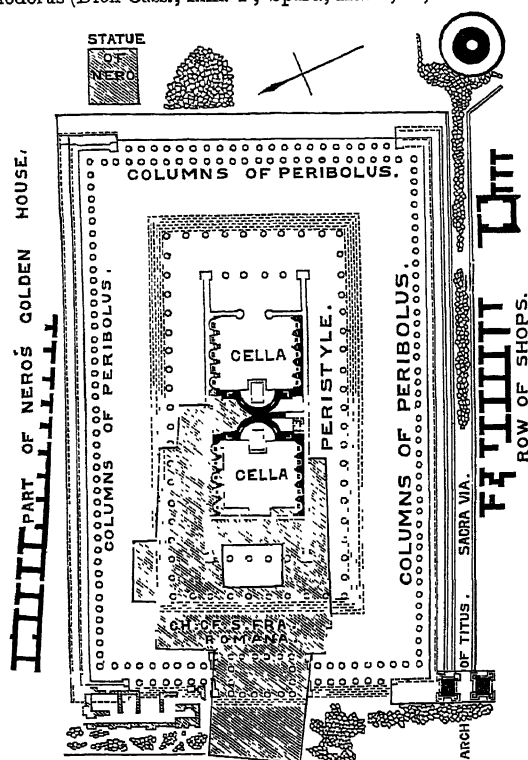

FIG. 23.—Temple of Venus and Rome.

was probably finished by Antoninus Pius; it was partly burned in the reign of Maxentius, who began its restoration, which was carried on by Constantine (Amm. Marcell., xvi. 10). The existing remains of the two cellae are mainly of Hadrian's time, but contain patches of the later restorations. Between the south angle of this temple and the arch of Constantine stand the remains of a fountain, usually known as the Meta Sudans. This was a tall conical structure in a large circular basin, all lined with marble. From its brick facing it appears to be a work of the Flavian period.

That part of the Caelian Hill which is near the Colosseum is covered with very extensive remains,—a great peribolus of brick-faced concrete, apparently of Flavian date, and part of a massive travertine arcade, somewhat similar to that of the Colosseum; most of the latter has been removed for the sake of the stone, but a portion still exists under the monastery and campanile of SS. Giovanni e Paolo. What this extensive building was remains doubtful till further excavations are made. According to one theory it is the temple of Claudius, built by Vespasian (Suet., *Vesp.*, 9); but Bunsen's suggestion is much more probable (*Besch.*, iii. p. 476), that it was the house of Vectilius, bought and probably enlarged by Commodus (*Hist. Aug.: Comm.*, 16), and connected with the Colosseum by a subterranean passage. Such a passage actually exists, and has been partly cleared out.

The so-called temple of Minerva Medica on the eastern slope of the Esquiline (so named from a statue found in it) is probably part of some baths. It is a curiously planned building, with central decagonal domed hall, probably of the time of Gallienus 268-269 (see Canina, *Ind. Top.*, p. 161). Somewhat similar ruins beside the neighbouring basilica of S. Croce have been supposed to belong to a nymphaeum of Severus Alexander, mentioned in the *Notitia*, Regio v., but are more probably part of the Sessorium, a court of justice on the Esquiline. The remains on the Quirinal in the Colonna gardens of massive marble entablatures richly sculptured were formerly thought to belong to Aurelian's great temple of the Sun, but it now appears certain that they belong to the very extensive thermæ of Constantine, part of the site of which is now occupied by the Quirinal palace and neighbouring buildings.²

The excavations of recent years have brought to light, and in many cases destroyed, a large number of domestic buildings;

many of these are recorded in the *Notizie degli Scavi* and the *Bull. Comm. Arch. Rom.*, 1872-1876. The extensive cutting away of the Tiber bank for the new embankment exposed some very ornate houses near the Villa Farnesina, richly decorated with marble, fine wall-paintings, and stucco reliefs, equal in beauty to any works of the kind that have ever been found. Some of these were cut off the wall, and will be exhibited in a new museum about to be formed to contain all ancient works of art found in Rome; but the houses themselves have been destroyed. The laying out of the new Quirinal and Esquiline quarters also has exposed many fine buildings. One handsome villa, built over the Servian wall, may possibly be the house of Mæcenas. A very remarkable vaulted room, decorated with paintings of plants and landscapes, has been shown to be a greenhouse;³ at one end is an apse with a series of step-like stages for flowers. This one room has been preserved, though the rest of the villa has been destroyed; it is on the road leading from S. Maria Maggiore to the Lateran. The walls are a very fine specimen of tufa opus reticulatum, unmixed with brick, evidently earlier than the Christian era. Among the numerous buildings discovered in the Horti Sallustiani near the Quirinal is a very fine house of the 1st century A.D., in concrete faced with brick and opus reticulatum. It has a central circular domed hall, with many rooms and staircases round it, rising several stories high. This house was set in the valley against a cliff of the Quirinal, so that the third floor is level with the upper part of the hill. It is nearly on the line of the Servian wall, which stood here at a higher level on the edge of the cliff. This is identified as the house of Sallust, which at his death became crown property, and was used as a residence by Nero (Tac., *Ann.*, xiii. 47) and other emperors till the 4th century.⁴ In 1884, near the Porta S. Lorenzo, a long line of houses was discovered during the making of a new road. Some of these were of opus reticulatum of the 1st century B.C.; others had the finest kind of brick-facing, probably of the time of Nero; all had been richly decorated with marble linings and mosaics. The line of the street was parallel to that of the later Aurelian wall, which at this part was built against the back of this row of houses. At the same time, behind the line of houses, were uncovered fine peperino and tufa piers of the aqueduct rebuilt by Augustus, one arch of which forms the Porta S. Lorenzo. These interesting remains have all been completely destroyed. A fine house of the end of the 1st century A.D., with richly decorated walls, was exposed in June 1884 against the slope of the Quirinal, near the Palazzo Colonna; it was immediately destroyed to make room for new buildings.

The prætorian camp was first made permanent and surrounded Prætor- with a strong wall by the emperor Tiberius (Suet., *Tib.*, 37). ian camp. Owing to the camp being included in the line of the Aurelian wall a great part of it still exists; it is a very interesting specimen of early imperial brick-facing. The wall is only 12 to 14 feet high, and has thinly scattered battlements, at intervals of 20 feet. The north gate (*Porta Principalis Dextra*) is well preserved; it had a tower on each side, now greatly reduced in height, in which are small windows with arched heads moulded in one slab of terracotta. The brick-facing is very neat and regular,—the bricks being about 1½ inches thick, with ½-inch joints. On the inside of the wall are rows of small rooms for the guards. Part of the Porta Decumana also remains. This camp was dismantled by Constantine, who removed its inner walls; the outer ones were left because they formed part of the Aurelian circuit. The present wall is nearly three times the height of the original camp wall. The upper part was added when Aurelian included it in his general circuit wall round Rome. The superior neatness and beauty of Tiberius's brick-facing make it easy to distinguish where his work ends and that of the later emperors begins. Owing to the addition of the later wall it requires some care to trace the rows of battlements which belong to the camp.

The Pantheon is the most perfect among existing classical build- Pan- ings in Rome (see fig. 24). It was built by Agrippa in 27 B.C., theon. as is recorded on the frieze of the portico. What its original purpose was is not clear; on the one hand, it forms part of the great thermæ built by Agrippa, and in position and design closely resembles the great circular calidarium in the thermæ of Caracalla; on the other hand, it has no hypocaust or hot-air flues, and was certainly consecrated as a temple to Mars, Venus, and other supposed ancestors of Cæsar's family very soon after it was built (Dion Cass., liii. 27); it was used as the meeting-place of the Fratres Arvales before they began to meet in the temple of Concord (see Henzen, *Acta Frat. Arval.*, 1868, No. 71).⁵ It had the name Pantheon apparently from the first; Pliny (*H.N.*, xxxvi. 4) men-

³ *Bull. Inst.*, 1875; see also *Bull. Comm. Arch.*, 1874, where drawings are given.

⁴ During excavations made here in 1876 lead pipes were found inscribed with the name of the estate, the imperial owner (Severus Alexander), and the plumber who made them—HORTORVM. FALLVTIAN. IMP. SEV. ALEXANDRI. AVG. NAEVIVS. MANES. SCITIT.

⁵ The demolition of the block of houses which was built against it at the back has exposed the point of junction between the Pantheon and the thermæ. It is now apparent that the Pantheon originally was an isolated building, and that the union of it and the thermæ was a later alteration.

¹ The existence of some chambers in the podium near the Colosseum and the great platform by which this temple is raised above the Sacra Via make it appear that the criticisms of Apollodorus were made before Hadrian's design was carried out, and that the emperor had the good sense to adopt the suggestions of his professional critic.

² See Palladio (*Terme dei Romani*, London, 1782), who gives the plan of this enormous building, now wholly hidden or destroyed.

Private
houses.

tions the sculpture by the Athenian Diogenes which adorned it, and its capitals and dome covering of Syracusan bronze (xxxiv. 7); the ceiling of the portico too was of bronze, supported by massive tubular girders,¹ which remained till Urban VIII. melted them to make cannon for S. Angelo and the baldacchino of St Peter's; the bronze weighed 450,000 lb. The bronze tiles of the dome were stolen long before by Constans II., in 663, but on their way to Constantinople they were seized by the Saracens. The portico has eight columns on the front and three on the sides, all granite monoliths except the restored ones on the east side,—sixteen in all. The capitals are Corinthian, of white marble; the tympanum (*derós*) of the pediment was filled with bronze reliefs of the battle of the gods and the giants.² The walls of the circular part, nearly 20 feet thick, are of solid tufa concrete, thinly faced with brick. The enormous dome, 142 feet 6 inches in span, is cast in concrete made of pumice-stone, pozzolana, and lime; being one solid mass, it covers the building like a shell, free from any lateral thrust at the haunches. Round the central opening or hypæthrum still remains a ring of enriched mouldings in gilt bronze, the only bit left of the bronze which once covered the whole dome. The lower story of the circular part and the walls of the projecting portico were covered with slabs of Greek marble; a great part of the latter still remains, enriched with

FIG. 24.—Plan of Pantheon and part of thermæ of Agrippa. A. Angle of portico rebuilt in 17th century. B, B. Niches which contained colossal statues of Augustus and Agrippa. C. Pedestal for statue, and apse added by Hadrian.

Corinthian pilasters and bands of sculptured ornament. The two upper stories of the drum were covered outside with hard stucco of pounded marble. Inside the whole was lined with a great variety of rich Oriental marbles. This magnificent interior, divided into two orders by an entablature supported on columns and pilasters, has been much injured by alteration; but the materials are ancient, and the general effect is probably much the same as it was, not in the time of Agrippa, but after the restorations of Hadrian (Spart., *Had.*, 181) and Severus, when the magnificently coloured porphyries and Oriental marbles were so largely used.³ About 608 the Pantheon was given by Phocas to Boniface IV., who consecrated it as the church of S. Maria ad Martyres. In 1881-82 the destruction of a row of houses behind the Pantheon exposed remains of a grand hall with richly sculptured entablature on Corinthian columns, part of the great thermæ of Agrippa, which extend beyond the Via della Ciambella (fig. 24). A great part of the thermæ appears from the brick stamps to belong to an extensive restoration in the reign of Hadrian, and bricks of his time are even said to have been found in the facing of the Pantheon itself.⁴ (See *BATHS*, vol. iii. p. 434 sq.)

Close by the Pantheon is the church of S. Maria sopra Minerva, which stands (as its name records) on the site of a temple to Minerva Chalcidica, probably founded by the great Pompey c. 60 B.C.⁵ Adjoining this were temples to Isis and Serapis, a cult which became very popular in Rome in the time of Hadrian; large quantities of sculpture, Egypto-Roman in style, have been found on this site at many different times.⁶

Several of the barracks (*excubitoria*) of the various cohorts of the vigiles or firemen have been discovered in various parts of Rome.

¹ Drawings of this interesting bronze work by Sallustio Peruzzi are preserved in the Uffizi at Florence.

² On the architrave is cut an inscription recording the restoration of the Pantheon by Severus in 202.

³ The Pantheon still possesses its original doors between fluted pilasters, and over them an open screen, all of bronze. Other ancient bronze doors still exist in the temple of Romulus, the Lateran basilica, and in its baptistry, the latter taken from the thermæ of Caracalla.

⁴ The plan of the whole group, including the Pantheon, is given by Palladio (*op. cit.*). The recent discoveries are given by Lanciani, *Not. d. Scavi*, 1882, p. 387, with a valuable plan. The one given by Canina is worthless. See also Maes, *Il Pantheon*, 1881; Geymuller, *Documents inédits sur les Thermes d'Agrippa*, Lausanne, 1883; Nispi-Landi, *Il Pantheon*, 1882; Adler, *Das Pantheon*, Berlin, 1871; and Hirt, *Das Pantheon*, Berlin, 1807.

⁵ Part of the Serapeum is shown on a fragment of the marble plan; see Jordan, *For. Ur. Rom.*

⁶ See Marucchi, "Le Scoperte dell' Isèo Campense," in *Bull. Comm. Arch. Rom.*, 1883, and *Ann. Inst.*, 1885; Fea, *Miscell.*, coliv. 112.

The central depôt is buried under the Palazzo Savorelli; that of the second cohort is on the Esquiline, near the so-called temple of Minerva Medica; that of the third was found in 1873 near the baths of Diocletian (see *Bull. Comm. Arch. Rom.*, 1873). The most perfect is that of the 7th cohort near S. Crisogono in Trastevere, a handsome house of the 2d century, decorated with mosaic floors, wall-paintings, &c.⁷

The excavations made in exposing the ancient church of S. Clemente brought to light interesting remains of many different periods; drawings are given by Mullooly, *St. Clement's Basilica*, 1869, and De Rossi, *Bull. Arch. Crist.*, 1870, pt. iv.

Many remains exist of the Golden House⁸ of Nero, which show Golden that this gorgeous palace covered an almost incredibly large space House of of ground, extending from the Palatine, over the Velia and the site of Nero. the temple of Venus and Rome, to the Esquiline, filling the great valley between the Coelian and the Esquiline where the Colosseum stands, and reaching far over the Esquiline to the great reservoir now called the "Sette Sala." No other extravagances or cruelties of Nero appear to have offended the Roman people so much as the erection of this enormous palace, which must have blocked up many important roads and occupied the site of a whole populous quarter. It was no doubt partly to make restitution for this enormous theft of land that Vespasian and Titus destroyed the Golden House and built the Colosseum and public thermæ of Titus⁹ on part of its site. Under the substructions of the latter building extensive remains of the Golden House still exist; and at one point, at a lower level still, pavements and foundations remain of one of the numerous houses destroyed by Nero to clear the site. The great bronze colossus of Nero, 120 feet high (Suet., *Nero*, 31), which stood in one of the porticus of the Golden House, was moved by Vespasian, with head and attributes altered to those of Apollo (Helios), on to the Velia; and it was moved again by Hadrian, when the temple of Rome was built, on to the base which still exists near the Colosseum. Several coins show this colossus by the side of the Colosseum.

Under the Palazzo Doria, the church of S. Maria in Via Lata, and Septa other neighbouring buildings extensive remains exist of a great Julia porticus, with long rows of travertine piers; this building appears to be represented on fragments of the marble plan with the words *SAEPT . . . LIA*. This is probably the Septa Julia, begun by Julius Cæsar, and completed by Agrippa in 27 B.C., as the voting place for the Comitia Centuriata, divided into compartments, one for each century. The building contained rostra, and was also used for gladiatorial shows. Under the later empire it became a bazaar and resort of slave-dealers.

That curiously planned building on the Esquiline, in the new Piazza Vit. Emmanuele, where the so-called trophies of Marius once were placed (see drawing by Du Perac in his *Vestigi*), is one of the numerous castella or reservoirs from which the water of the various aqueducts was distributed in the quarters they were meant to supply. This was built by Severus Alexander at the termination of his Alexandrine aqueduct, opened in 225 (see Lamprid., *Hist. Aug.: Sev. Alex.*, 25). The marble trophies are now set at the top of the Capitoline steps; their quarry mark shows them to be of the time of Domitian: it consists of the following inscription, now not visible, as it is cut on the under part—*IMP. DOM. AVG. GERM. FER. CHREZ. LIB. .X.CZ.*¹⁰

Places of Amusement.

The Circus Maximus (see vol. v. p. 791) occupied the Vallis Circus between the Palatine and the Aventine. Its first rows of seats, which were of wood, were made under Tarquin I. (*Liv.*, i. 56; Dionys., iii. 68). It was restored in 327 and 174 B.C. (*Liv.*, viii. 20; xli. 27). In the reign of Julius Cæsar it was rebuilt with (for the first time) lower seats of stone (*Plin.*, *H.N.*, xxxvi. 24), the upper being still of wood (Suet., *Cæs.*, 39); Dionysius (iii. 68) describes it as it was after this rebuilding. It was further ornamented with marble by Augustus, Claudius, and other emperors. The wooden part was burnt in the great fire of Nero, and again under Domitian, by whom it was restored wholly in stone and marble, and lastly it was restored and enlarged by Constantine. In its later stato it had a marble façade with three external tiers of arches with engaged columns, and (inside) sloping tiers of marble seats, supported on concrete raking vaults (*Plin.*, *Paneg.*, 51). A great part of these vaults existed in the 16th century, and is shown by Du Perac. It held a quarter of a million spectators (*Plin.*, *H.N.*,

⁷ See De Rossi, "Vigili," in *Ann. Inst.*, 1858; Visconti, *Corte VII. de' Vigili*, 1867.

⁸ See Fea, *Casa Aurea*, 1832.

⁹ See Romanis, *Terme di Tito*, 1822. It should be noted that the paintings said in this and other works to have belonged to the baths of Titus really decorated the Golden House, over which the baths were built. The substructures of Titus's building are absolutely without ornament, and were almost devoid of light.

¹⁰ See Bruzza, in *Ann. Inst.*, 1870, and Lenormant, *Trophées de Marius*, Blois, 1842. This once magnificent building, with the marble trophies in their place, is shown with much minuteness on a bronze medallion of Severus Alexander (see Froehner, *Médailles de l'Empire*, Paris, 1878, p. 160).

xxxvi. 24). The end with the carceres was near the church of S. Maria in Cosmedin.¹ Some of its substructures, with remains of very early tufa structures on the Palatine side, still exist below the church of S. Anastasia (see 58 in fig. 17). The obelisk now in the Piazza del Popolo was set on the spina by Augustus. The Circus Flaminius in the Campus Martius was built by the C. Flaminius Nepos killed at Thrasymene in 217 B.C.; remains of the structure were found in the 16th century under the Palazzo Mattei. In the Middle Ages its long open space was used as a rope-walk, hence the name of the church called S. Caterina dei Funari, which occupies part of its site.² The circus of Caligula and Nero was at the foot of the Vatican Hill (Plin., *H.N.*, xxxvi. 15). The modern sacristy of St Peter's stands over part of its site. The obelisk on its spina remained standing *in situ* till it was moved by Fontana³ for Sixtus V. to its present site in the centre of the piazza. Another circus was built by Hadrian near his mausoleum; remains of it were found in 1743, but nothing is now visible (*Atti d. Pont. Accad.*, 1839). The great stadium, foundations of which exist under most of the houses of the Piazza Navona (Agonalis), and especially below S. Agnese, is probably that built by Domitian and restored by Severus Alexander. It was called from the latter emperor the Stadium Alexandrinum. That it was a stadium and not a circus is shown by the fact that its starting end is at right angles to the sides and not set diagonally, as was always the case with the carceres of a circus; nor is there any trace of foundations of a spina. The best preserved circus is that built by Maxentius in honour of his deified son Romulus, by the Via Appia, 2 miles outside the walls of Rome. It was attributed to Caracalla till 1825, when an inscription recording its true dedication was found.⁴

The first permanent naumachia was that constructed by Augustus between the foot of the Janiculum Hill and the Tiber; traces of it have recently been discovered near the church of S. Crisogono. The naumachia of Domitian was pulled down and the materials used to restore the Circus Maximus (Suet., *Dom.*, 5); its site is not known.

Theatres. The first stone⁵ theatre in Rome was that built by Pompey, 56-52 B.C.; it contained a temple to Venus Victrix, and in front of it was a great porticus called Hecateostylum from its hundred columns. This is shown on the marble plan.⁶ Considerable remains of the foundations exist between the Via de' Chiavari, which follows the line of the scena, and the Via de' Giubbonari and Via del Paradiso. Adjoining this was the curia of Pompey, where Caesar was murdered, after which it was burnt and the site decreed to be a "locus scleratus." The colossal statue, popularly supposed to be that of Pompey at the feet of which Caesar died,⁷ now in the Palazzo Spada, was found in 1553 near the theatre. This theatre was restored by Augustus (*Mon. Ancy.*); in the reign of Tiberius it was burnt and its rebuilding was completed by Caligula. The scena was again burnt in 80 A.D., and restored by Titus. According to Pliny (*H.N.*, xxxvi. 24), it held 40,000 spectators. In 1864 the colossal gilt bronze statue of Hercules, now in the Vatican, a work of the 3d century, was found near the site of the theatre of Pompey, carefully concealed underground. The theatre of Marcellus is much more perfect; complete foundations of the cunei exist under the Palazzo Savelli, and part of the external arcade is well preserved. This is built of travertine in two orders, Tuscan and Ionic, with delicate details, very superior to those of the Colosseum, the arcade of which is very similar to this in general design. This theatre was begun by J. Caesar, and finished by Augustus in 13 B.C., who dedicated it in the name of his nephew Marcellus.⁸ It was restored by Vespasian (Suet., *Vesp.*, 19). Livy (xl. 51) mentions an earlier theatre on the same spot, built by M. Aemilius Lepidus in 179 B.C.

¹ Part of it is shown on a fragment of the marble plan (see Jordan, *For. Ur. Rom.*); it is represented on a bronze medallion of Gordian III., with an obelisk on the spina and three metæ at each end; in front are groups of gladiators wrestling and boxing (see Grueber, *Rom. Med.*, pl. xli., London, 1874).

² The 16th-century discoveries recorded by Fulvio and Lagorio are quoted by Nardini, *Roma Ant.* (ed. Nibby, 1818-20), iii. p. 21.

³ See his *Trasportazione dell' Obelisco Vat.*, 1590.

⁴ Nibby, *Circo di Caracalla*, 1825; Canina, *Rom. Ant.*, i. p. 447, pl. cxxxvii.; see also Panvinus, *De Lud. Circus.*, and Bianconi, *Descr. del Circo*, 1789. An interesting relief showing a circus race, with the carceres, spina, and galleries for spectators, is illustrated in *Ann. Inst.*, 1870, pl. LM; and three of the same subject are preserved in the Sala della Biga in the Vatican; see also the Brescia diptych, Gori (*Thesaur. Vet. Dipt.*, Florence, 1759).

⁵ A great prejudice existed in republican Rome against the introduction of the Greek custom of having permanent stone theatres. In 154 B.C., owing to the advice of Scipio Nasica, the Senate demolished a half-finished stone theatre which had been begun by the censor C. Cassius Longinus. Even Pompey had to build a temple to Venus in the upper part of his theatre as a sort of excuse for having seats and steps of stone leading up to it (Tertull., *De Spec.*, 10).

⁶ Plut., *Pomp.*, 52; Dion Cass., xxxix. 38; Tac., *Ann.*, xiv. 20.

⁷ See Fea, *Rom. Ant.*, lxxviii. 57, for an account of its discovery.

⁸ Suet., *Aug.*, 29. See *Mon. Ancy.*—"Theatrum ad aedem Apollinis in solo magna ex parte a. [privatis] jempto. feci. qvod. svb. nomine. M. Marcell. generi. [me] esset." The temple of Apollo here named was one of the most ancient and highly venerated in Rome; it was dedicated to the Delphic Apollo in 428 B.C. by C. Julius (Liv., iv. 25); meetings of the Senate were held in it; and it contained many fine works of art,—an ancient cedar-wood statue of Apollo (Liv., xxvii. 37), and the celebrated statues of the slaughter of the Nioibids by Praxiteles or Scopas (Plin., *H.N.*, xxxvi. 4), of which many ancient copies exist. One almost complete set is in the Uffizi at Florence; one figure of one of the daughters in the Vatican may be an original.

It stands partly in the Forum Olitorium, a large extent of the travertine paving of which was exposed in 1875 (*Bull. Com. Arch. Mun.*, iii. 1875). Foundations also of the theatre of Balbus exist under the Palazzo Cenci; and in the Via di S. Maria in Cacaberis, No. 23, there is a small portion of the external arcade of the porticus which belonged to this theatre; the lower story has travertine arches with engaged columns, and the upper has brick-faced pilasters. It was built by Cornelius Balbus in 13 B.C. (Suet., *Aug.*, 29; Dion Cass., liv. 25). An interesting account of the temporary theatre of Scaurus, erected in 58 B.C., is given by Pliny (*H.N.*, xxxvi. 2, 24). The same writer mentions an almost incredible building, which consisted of two wooden theatres made to revolve on pivots, so that the two together made an amphitheatre; this was erected by C. Curio in 50 B.C.

The first stone amphitheatre in Rome was that built by Statilius Amphitruus in the reign of Augustus. Its ruins are supposed to form theatres the elevation called Monte Giordano, but none of it is visible. For the Colosseum see AMPHITHEATRE, vol. i. The Amphitheatrum Castrense is in the line of the wall of Aurelian near the Porta Asinaria; it is built of concrete, faced with neat brickwork, and was decorated with friezes and other ornaments in moulded terracotta. Its exterior had two tiers of arches between engaged Corinthian columns, all, even the foliage of the capitals, very neatly executed in terra-cotta. Only one piece with the upper order still exists on the outside of the Aurelian line. This amphitheatre is mentioned in the regionary catalogues under Regio v. It is supposed to have been erected for the amusement of the troops in the neighbouring camp, hence its name. From the character of the brick-facing the building appears to date from the early part of the 2d century.

Arches, Columns, Tombs, and Bridges.

The earliest triumphal arches were the two erected by L. Stertinius Arches, (196 B.C.) in the Forum Boarium and in the Circus Maximus, out of spoils gained in Spain.⁹ In the later years of the empire there were nearly forty in Rome. The arch of Titus and Vespasian on the Summa Sacra Via was erected by Domitian to commemorate the conquest of Judæa by Titus in his father's reign. Reliefs inside the arch represent the triumphal procession—Titus in a chariot, and on the other side soldiers bearing the golden candlestick, trumpets, and table of prothesis, taken from the Jewish temple. The central part only of this monument is original; the sides were restored in 1823.¹⁰ Another arch in honour of Titus had previously been built (80 A.D.) in the Circus Maximus; its inscription is given in the Einsiedeln MS. (Gruter, *Inscr.*, p. 244, No. 6). A plain travertine arch near the supposed palace of Commodus on the Coelian is inscribed with the names of the consul Publius Corn. Dolabella (10 A.D.) and of the flamen martialis, C. Junius Silanus. In later times Nero's aqueduct was built over it. It may possibly have been an entrance into the Campus Martialis, an enclosure on the Coelian sacred to Mars, which was used for games when the Campus Martius was flooded. The so-called arch of Drusus by the Porta Appia also carries the specus of an aqueduct,—that built by Caracalla to supply his great thermæ. Its coarse details show, however, that it is much later than the time of Drusus (Suet., *Claud.*, 1). It was usual to ornament specially the arch of an aqueduct that happened to cross a road, and this arch was probably built by Caracalla with the rest of his branch of the Aqua Marcia. Adjoining the church of S. Giorgio in Velabro a rich though coarsely decorated marble gateway with flat lintel still exists,—built, as its inscription records, in honour of Severus and his sons by the argentarii (bankers and silversmiths) and other merchants of the Forum Boarium in 204. It formed an entrance from the Forum Boarium into the Velabrum. The figure of Geta in the reliefs and his name have been erased by Caracalla; the sculpture is poor both in design and execution¹¹ (see *Bull. Inst.*, 1867, p. 217, and 1871, p. 233). Close by is a quadruple arch, set at the intersection of two roads, such as was called by the Romans an arch of Janus Quadrifrons. Though partly built of earlier fragments, it is of the worst style of work; it cannot be earlier than the time of Constantine, and probably is of still later date. The finest existing arch is that by the Colosseum erected by Constantine. It owes, however, little of its beauty to that artistically degraded period. Not only most of its reliefs but its whole design and many of its architectural features were stolen from an earlier arch erected by Trajan as an entrance to his forum (see p. 826 above). The arch of Claudius, built in 43 to commemorate his supposed victories in Britain, stood across the Via Lata (modern Corso) between S. Francesco Saverio and the Palazzo Sciarra. Its exact position is shown in *Bull.*

⁹ Liv., xxxiii. 27, see also xxxvii. 8.

¹⁰ This arch is the earliest known example of the so-called Composite order, a modification of Corinthian in which the capitals combine Ionic volutes with Corinthian acanthus leaves; in other respects it follows the Corinthian order.

¹¹ The second half of the 2d century was a time of extraordinarily rapid decline in art. The relief of Antinous in the Villa Albani and other portraits of him made in the reign of Hadrian (117-138) are among the most beautiful existing specimens of Roman or Græco-Roman sculpture; while after the accession of Severus in 193 no sculpture of any real artistic merit seems to have been produced.

Comm. Arch. Rom., vi., pl. iv. Its remains were removed in the middle of the 16th century,¹ and nothing now is left but half its inscription, preserved in the garden of the Barberini palace, and two of its reliefs in the porch of the Villa Borghese. It is shown on both aurei and denarii of Claudius, with an attic inscribed DE BRITANNIS, and surmounted by a quadriga and trophies. The arch of Marcus Aurelius, also destroyed in the 16th century, spanned the modern Corso farther north, where the Via Lata had become the Via Flaminia.² Many of its fine reliefs are preserved in the Capitoline Museum. The central part of the once triple arch of Gallienus still exists on the Esquiline; it stands against the ancient Porta Esquilina of the Servian wall. It is built of travertine, is simple in design, with coarse details, and has a long inscription on its attic. The two side arches and pediment over the centre existed in the 16th century, and are shown in the Mantuan oil-painting of Rome,³ and in several antiquarian works of the 16th century. The inscription records that it was erected in 262 in honour of Gallienus and his wife Salonina by M. Aurelius Victor, prefect of the city.⁴

Columns. The column of Antoninus Pius was a monolith of red granite, erected after his death by his adopted sons M. Aurelius and L. Verus. One fragment of it is preserved in the Vatican with an interesting quarry inscription, recording that it was cut in the ninth year of Trajan's reign, under the supervision of Dioscurus and the architect Aristides. The rest of its fragments were used by Pius VI. to repair the obelisk of Monte Citorio, set up by Augustus in the Campus Martius as the gnomon of a sun-dial (Plin., *H.N.*, xxxvi. 15). The marble pedestal of the Antonine column is now in the Vatican; it has reliefs of the apotheosis of Faustina and Antoninus Pius, and processions of soldiers. This and the column of M. Aurelius were both surmounted by colossal portrait statues of gilt bronze. The column of M. Aurelius is very similar in size and design to that of Trajan. Its spiral reliefs represent victories in Germany from 167 to 179, arranged in twenty tiers. Like the column of Trajan, it is exactly 100 Roman feet high, without the pedestal. The pedestal was originally much higher than at present, but is now partly buried; it is shown by Gamucci, Du Perac, and other 16th-century writers. This column stood in front of a temple to M. Aurelius, and within a great peribolus, forming a forum similar to that of Trajan, though much smaller; the remains of this temple probably form the elevation now called Monte Citorio.⁵

Tombs. For the catacombs see that article (vol. v. p. 206); for obelisks⁶ see ARCHITECTURE (vol. ii. p. 390) and EGYPT (vol. vii. pp. 768, 778). The recent discovery of a cemetery of prehistoric (Etruscan) date is mentioned above, p. 812. Few tombs exist of the Roman period earlier than the 1st century B.C.,—probably owing to the great extension of the city beyond the Servian limits, which thus obliterated the earlier burial places. The tomb of the Cornelian Scipios is the most important of early date which still exists. It is excavated in the tufa rock at the side of the Via Appia, outside the Porta Capena. Interments of the Scipio family went on here for about 400 years, additional chambers and passages being excavated from time to time. The peperino sarcophagus of Cornelius Lucius Scipio Barbatus (Liv., x. 12, 13), consul in 298 B.C., is now in the Vatican; its inscription, in rude Saturnian verse, is perhaps the most important existing specimen of early Latin epigraphy. Many other inscribed slabs were found in the 17th century, covering the "loculi" in which lay the bodies of later members of the family. Those now existing in the tomb are modern copies, with blundered inscriptions. All are given by Mommsen (*C.I.L.*, i. p. 11 sq.). This burial-place of the Scipios is unlike those of other families, owing to the gens Cornelia keeping up the early custom of interment without burning; thus stone sarcophagi or loculi (rock-cut recesses) were required instead of mere pigeon-holes to hold the cinerary urns. The tomb of Bibulus, a few yards outside the Porta Ratomena, and remains of two recently discovered during the destruction of the Aurelian towers at the Porta Salara, date from about the middle of the 1st century B.C., as does also the curious tomb of the baker Euryaces outside the Porta Maggiore. In 1863 an interesting tomb of the Sempronius gens was discovered on the Quirinal, below the royal palace, near the site of the Porta Sanqualis. It is of travertine, with a rich entablature and frieze sculptured with the

Greek honeysuckle ornament (see *Bull. Comm. Arch. Rom.*, iv.). This also is of the last years of the republic.⁷

The mausoleum of Augustus, built 28 B.C., stands in the north Mausoleum of the Campus Martius, between the Tiber and the Via lea Flaminia. It is a massive cylindrical structure of concrete, faced with opus reticulatum; over that it was lined with marble slabs; inside were a series of radiating chambers, in plan like a wheel. On the top was a great mound of earth, planted with trees and flowers (Tac., *Ann.*, iii. 9). As late as the 16th century its external form remained unaltered.⁸ Only the bare core exists now, with its fine opus reticulatum, best seen in the court of the Palazzo Valdambrini. The inside is concealed by modern seats, being used now as a circus (Teatro Correa). The sepulchral inscription in honour of Augustus, engraved on two bronze columns at the entrance, is preserved to us by its copy at Ancyra. It records an almost incredible amount of building: in addition to the long list of buildings mentioned by name Augustus says, DVO. ET. OCTAGINTA. TEMPLA. DEVM. IN. VRBE. CONSVL. SEXTVM. . . REFECIT.⁹ The first burial in the mausoleum of Augustus was that of Marcellus, 22 B.C., and it continued to be the imperial tomb till the death of Nerva, 98 A.D., after whose interment there was no more room. It was sacked by Alaric in 409, and in the 12th century was made into a fortress by the Colonna family, and suffered much from constant party struggles.

The mausoleum of Hadrian, begun in 135 as a substitute for that built by Augustus, was a large circular building on a square podium; its walls, of enormous thickness, are of concrete faced with blocks of peperino, the whole being lined with Parian marble and surrounded by a colonnade with rows of statues,—a work of the greatest magnificence. The bronze pine-cone, now in the Vatican, was (according to Vacca) found near the mausoleum, and probably surmounted its conical dome. The splendour of the whole is described by Procopius (*B. G.*, i. 22), who mentions its siege by the Goths, when the defenders hurled the statues on to the heads of the enemy. In the 6th century it was made into a papal castle called S. Angelus inter Nubes, and all through the Middle Ages it suffered much from constant attacks. The interior chambers are still well preserved, but its outside has been so often wrecked and refaced that little of the original masonry is visible.

Several of the grander sepulchral monuments of Rome were built Sepulchral in the form of pyramids. One of these still exists, included in the choral Aurelian wall, by the Porta Ostiensis. It is a pyramid of concrete, pyramidal 118 feet high, faced with blocks of white marble, and contains a mids. small chamber decorated with painted stucco. An inscription in large letters on the marble facing records that it was built as a tomb for C. Cestius, a praetor, tribune of the people, and septemvir of the epulones (officials who supervised banquets in honour of the gods)—an office founded in 196 B.C. (Liv., xxxiii. 42). It was erected, according to Cestius's will, by his executors, in the space of 380 days. It dates from the time of Augustus¹⁰ (see Falconieri, in Nardini, *Roma Antica*, iv. p. 1, ed. 1813-20). Another similar pyramid, popularly known as the tomb of Romulus, stood between the mausoleum of Hadrian and the basilica of St Peter. It was destroyed in the 15th century during the rebuilding of the long bridge which connects the former building with the Vatican.

The earliest bridge was a wooden drawbridge called the Pons Sublicius from the piles (*sublicae*) on which it was built. The river being an important part of the defence of Rome from the Aventine to the Porta Fluminialis (see plan of Servian wall, fig. 8), no permanent bridges were made till the Romans were strong enough not to fear attacks from without. The Pons Sublicius appears to

⁷ See A. F. Gori, *Columb. Libert. et Serv. Livias*, 1727; Bianchini, *Camera . . . Sepulchrali*, 1727; Campana, *Sepolcri Romani*, 1840; Fortunati, *Scavi lungo la Via Latina*, 1859; Brizio, *Pittura e Sepolcri sull' Esquilino*, 1876; Secchi, *Sepolcro di una Famiglia Greca*, 1848; Visconti, *Sepolcro di Q. Sulpicio Massimo*, 1871; Stevenson, *Cimitero di Zoticco, Via Labicana*, 1876.

⁸ See Du Perac's *Vestigi*, which shows the garden on the top.

⁹ The other greatest building period after the reign of Augustus appears to have been that of Severus and his son Caracalla; the following list of buildings, built or restored between 196 and 211, will give some notion of this:—Marcian aqueduct restored and lengthened to the Thermæ Severianæ in 196; paedagogium puerorum a capite Africæ in 198; temple of Cybele on the Palatine in 200, rebuilt; Claudian and Anio Novus aqueducts restored in 201; theatre of Pompey, Pantheon, thermæ of Agrippa, Amphitheatrum Castrense, and praetorian camp, all restored in 202; Septizonium and great palace on the Palatine, and arches in the Forum Magnum and Forum Boarium built; Stadium Palatinum, Porticus Octaviae, and Forum Pacis restored, all in 208. In various years before 211: temple of Vespasian, of Fortuna Muliebris, schola scribarum, balneæ near the Porta Septimiana, horti of Geta, a porticus with res gestæ Divi Severi, the Antonine aqueduct, and (212-215) the great thermæ of Caracalla. The great fire of 191 was one of the causes of these extensive works (see Lanciani, *Bull. Comm. Arch. Rom.*, 1882).

¹⁰ Near the tomb of Cestius is that extraordinary mound of potsherds called Monte Testaccio. These are mostly fragments of large amphoræ, not piled up at random, but carefully stacked, with apertures at intervals for ventilation. Many theories have been advanced to account for this enormous mass of broken pottery; but by far the most probable explanation is that the broken earthenware of Rome was collected and stored here for use in the making of the stucco called opus signinum (Vitruv., viii. 6, 14), with which the specus or channels of aqueducts were lined, and also the concrete in which marble and mosaic pavings were bedded (nucleus). This latter is the opus testaceum of Vitruvius (vii. 1, 5); and the universal use of pounded earthenware for floors and aqueducts must have used up immense quantities of broken pots and bricks (*testes tunse*). A good account of the potsherds of Monte Testaccio and their stamps is given in *Ann. Inst.*, 1878, p. 118.

¹ See Vacca, ap. Fea, *Misc.*, p. 67.

² The destruction in 1879 of the Aurelian towers flanking the Porta del Popolo brought to light the fact that this gate is exactly on the site of the ancient Porta Flaminia, and not to one side of it, as was formerly believed on the evidence of a vague passage in Procopius (*Bell. Goth.*, i. 23). Thus it appears probable that the northern part of the Corso follows the line of the Via Flaminia, as the southern portion does that of the Via Lata.

³ Reproduced by De Rossi in his valuable *Piante di Roma Anteriori al Sec. XVI.*, 1879.

⁴ See Bellori, *Veteres Arcus*, 1690, showing some now destroyed; and Fea, *Arch. Trionf.*, 1832.

⁵ See *Ann. Inst.*, 1852, p. 338; and *Mon. Inst.*, v., pl. xl. See also Fabria, *Piedestallo d. Col. Anton.*, 1846; Bartoli, *Col. M. Aurelii*, 1704; Chausse, *Col. ritrovata nel Campo Marzio*, Naples, 1704; Pellegrini, *Colonne ed Obelisch*, 1881.

⁶ In 1882 a small Egyptian obelisk of red granite was found buried near the Pantheon; it now lies in the Piazza del Collegio Romano; a translation of its hieroglyphs is given in *Bull. Comm. Arch. Rom.*, 1888. At the same time a very curious granite column was discovered of Egypto-Roman work, the lower part adorned with figures in relief.

have been of wood even in the imperial period.¹ Its exact site is doubtful, but some existing foundations near the foot of the Aventine, near the Marmoratum, may have been the supports of its wooden piers. The first stone bridge was completed in 142 B.C., when the conquest of Etruria and the defeat of Hannibal had put an end to fears of invasion; it was called the Pons Æmilii, after the pontifex maximus² M. Æmilii Lepidus, its founder. It was also called Pons Lapidus to distinguish it from the wooden Sublician bridge. The modern Ponte Rotto is on the site of this; but the existing three arches are mediæval. An ancient basalt-paved road still exists, leading to the bridge from the Forum Boarium. The Pons Fabricius unites the city and the island (Insula Tiberina); Livy (ii. 5) gives the fable of the formation of this island from the Tarquin corn, cut from the Campus Martius and thrown into the river. The bridge derived its name from L. Fabricius, a curator viarum in 62 B.C.; its inscription, twice repeated, is L. FABRICIVS. C. F. CVR. VIAR. FACIVNDVM. COERAVIT. Like the other existing bridges, it is built of great blocks of peperino and tufa, with a massive facing of travertine on both sides. Corbels to support centering were built in near the springing of the arches, so that they could be repaired or even rebuilt without a scaffolding erected in the river-bed. The well-preserved Pons Cestius, probably named after L. Cestius, prefectus urbi in 46 B.C., unites the island and the Janiculan side; on the marble parapet is a long inscription recording its restoration in 370 by Gratian, Valentinian, and Valens. The next bridge, Ponte Sisto, is probably on the site of an ancient bridge called in the *Notitia* Pons Aurelius. Marliano gives an inscription (now lost) which recorded its restoration in the time of Hadrian. The Pons Ælius was built in 135 by Hadrian to connect his mausoleum with the Campus Martius; it is still well preserved, and is now called the Ponte S. Angelo (see Dante, *Infer.*, xviii. 28-33). Its inscription, now lost, is given in the Einsiedeln MS.—IMP. CAESAR. DIVI. TRAIANI. PARTHICI. FILIVS. DIVI. NERVAE. NEPOS. TRAIANVS. HADRIANVS. AVG. PONT. MAX. TRIB. POT. XVIII. COS. III. P. P. FECIT. The Pons Ælius is shown on coins of Hadrian. A little below it are the foundations of another bridge, probably the Pons Neronianus of the *Mirabilia*, called also Vaticanus, built probably by Nero as a way to his Vatican circus and the Horti Agrippinae.³

Regiones of Augustus.

In spite of the extensive growth of the city under the republic no addition was made to the four regiones of Servius till the reign of Augustus, who divided the city and its suburbs into fourteen regiones, the first six of which embraced the original four of Servius. The lists in the *Notitia* and *Curiosum* are the chief aids in determining the limits of each, which in many cases cannot be done with any exactness (see Preller, *Die Regionen der Stadt Rom*, 1846, and Uhlrichs, *Codex Topograph.*, Würzburg, 1871). Each regio was divided into vici or parishes, each of which formed a religious body, with its *ædicula larum*, and had magistri vicorum, the lowest in rank of the Roman magistracy. The smallest regio (No. II.) contained seven vici, the largest (No. XIV.) seventy-eight. The list is as follows:—

- I. or *Porta Capena*, extended to the Aurelian Porta Appia.
- II. or *Caelimontana*, the Caelian Hill.
- III. or *Isis et Serapis*, included the valley of the Colosseum and the adjoining part of the Esquiline.
- IV. or *Templum Pacis et Sacra Via*, included the Velia, most of the Subura, the fora of Nerva and Vespasian, the Sacra Via, and also buildings along the north-east side of the Forum Magnum.
- V. or *Esquilina*, north part of the Esquiline and the Viminal.
- VI. or *Alta Semita*, the Quirinal as far as the prætorian camp.
- VII. or *Via Lata*, the valley bounded on the west by the Via Lata, and by the neighbouring hills on the east.
- VIII. or *Forum Romanum*, also included the fora of Julius, Augustus, and Trajan, and the whole Capitoline Hill.
- IX. or *Circus Flaminius*, between the Tiber, the Capitol, and the Via Lata.
- X. or *Palatinum*, the Palatine Hill.
- XI. or *Circus Maximus*, the valley between the Palatine and the Aventine, with the Velabrum and Forum Boarium.
- XII. or *Piscina Publica*, between the Caelian and the Aventine, and beyond the Via Appia, including the site of Caracalla's thermæ.
- XIII. or *Aventinus*, the hill, and the bank of the Tiber below it.
- XIV. or *Transiberina*, the whole district across the river and the Tiber Island.⁴

The walls of Aurelian (see Plates VII. and IX.), more than 12 miles in circuit, were mainly built to enclose the regiones of Augustus, the greater part of which were then thickly inhabited. This

enormous work was begun in 271, to defend Rome against sudden attacks of the Germans and other northern races when the armies of Rome were fighting in distant countries. After the death of Aurelian the walls were completed in 280, and about a century later they were restored and enlarged in 280, and addition of gate-towers under Arcadius and Theodosius in the place of the earlier gateways of Aurelian; in fact 395-425), existing inscriptions on several of the gates.⁵ At recorded by these walls suffered much from the attacks of the Goths (Præp., *Bell. Goth.*, iii. 22, 24), and were restored successively by Theodoric (about 500), by Belisarius (about 560), and by various popes during the 8th and 9th centuries, and in fact all through the Middle Ages. A great part of the Aurelian wall still exists in a more or less perfect state; but it has wholly vanished where it skirted the river, and a great part of its trans-Tiberine course is gone. The most perfect piece is that in the gardens of the Villa Ludovisi. Other well-preserved pieces are by the Porta Appia, and between the Lateran and the Amphitheatrum Castrense. The wall, of concrete, has the usual brick-facing and is about 12 feet thick, with a guards' passage formed in its thickness. Fig. 25 shows its plan: on the inside the

FIG. 25.—Aurelian's wall; plan showing one of the towers and the passage in thickness of wall.

passage has tall open arches, which look like those of an aqueduct, and at regular intervals of about 45 feet massive square towers are built, projecting on the outside of the wall, in three stories, the top story rising above the top of the wall. The height of the wall varies according to the contour of the ground; in parts it was about 60 feet high outside and 40 inside. Necessaria, supported on two travertine corbels, projected from the top of the wall on the outside beside most of the towers. The Einsiedeln MS. gives a description of the complete circuit, counting all the gates, fourteen in number, as follows:—

Porta S. Petri (destroyed); P. Flaminia (in use); P. Pinciana (closed); P. Salaria (destroyed in 1870); P. Nomentana (closed); P. Tiburtina (in use, now called P. S. Lorenzo); P. Prænestina (in use, now Porta Maggiore); P. Asinaria (closed); P. Metrovia (closed); P. Latina (closed); P. Appia (in use, now called P. S. Sebastiano); P. Ostiensis (in use, now P. S. Paolo). On the Janiculan side, P. Portensis (destroyed); P. Aurelia (in use). One gate, known as the P. Chiusa, is omitted in this list, owing to its being blocked up in the time of the Einsiedeln writer. Its ancient name is not known.

These existing gates are mostly of the time of Honorius; each is flanked by a projecting tower, and some are double, with a second pair of towers inside. Several have grooves for a portcullis (*cata-racta*) in the outer arch. The handsomest gate is the P. Appia, with two massive outer towers, three stages high, the upper semicircular in plan. Many of the gates of Honorius have Christian symbols or inscriptions. The general design of all these gates is much the same,—a central archway, with a row of windows over it and two flanking towers, some square, others semicircular in plan. In many of the gates older materials are used, blocks of tufa, travertine, or marble. The doors themselves swung on pivots, the bottom ones let into a hole in the threshold, the upper into projecting corbels.

At many points along the line of the Aurelian wall older buildings form part of the circuit,—near the Porta Asinaria a large piece of the Domus Laterana, a house of the 3d century which gave its name to the Lateran basilica, and a little farther on, by S. Croce in Gerusalemme, the Amphitheatrum Castrense; the latter, of about the end of the 1st century A.D., has two tiers of arches and engaged columns of moulded brick on the outside. Between the P. Prænestina and the P. Tiburtina comes a large castellum of the Aqua Tepula. The Prætorian Camp forms a great projection near the P. Nomentana. Lastly, the angle near the Porta Flaminia, at the

¹ See Varro, *L. L.*, v. 83; Ov., *Fast.*, v. 622; Tac., *Hist.*, i. 86.

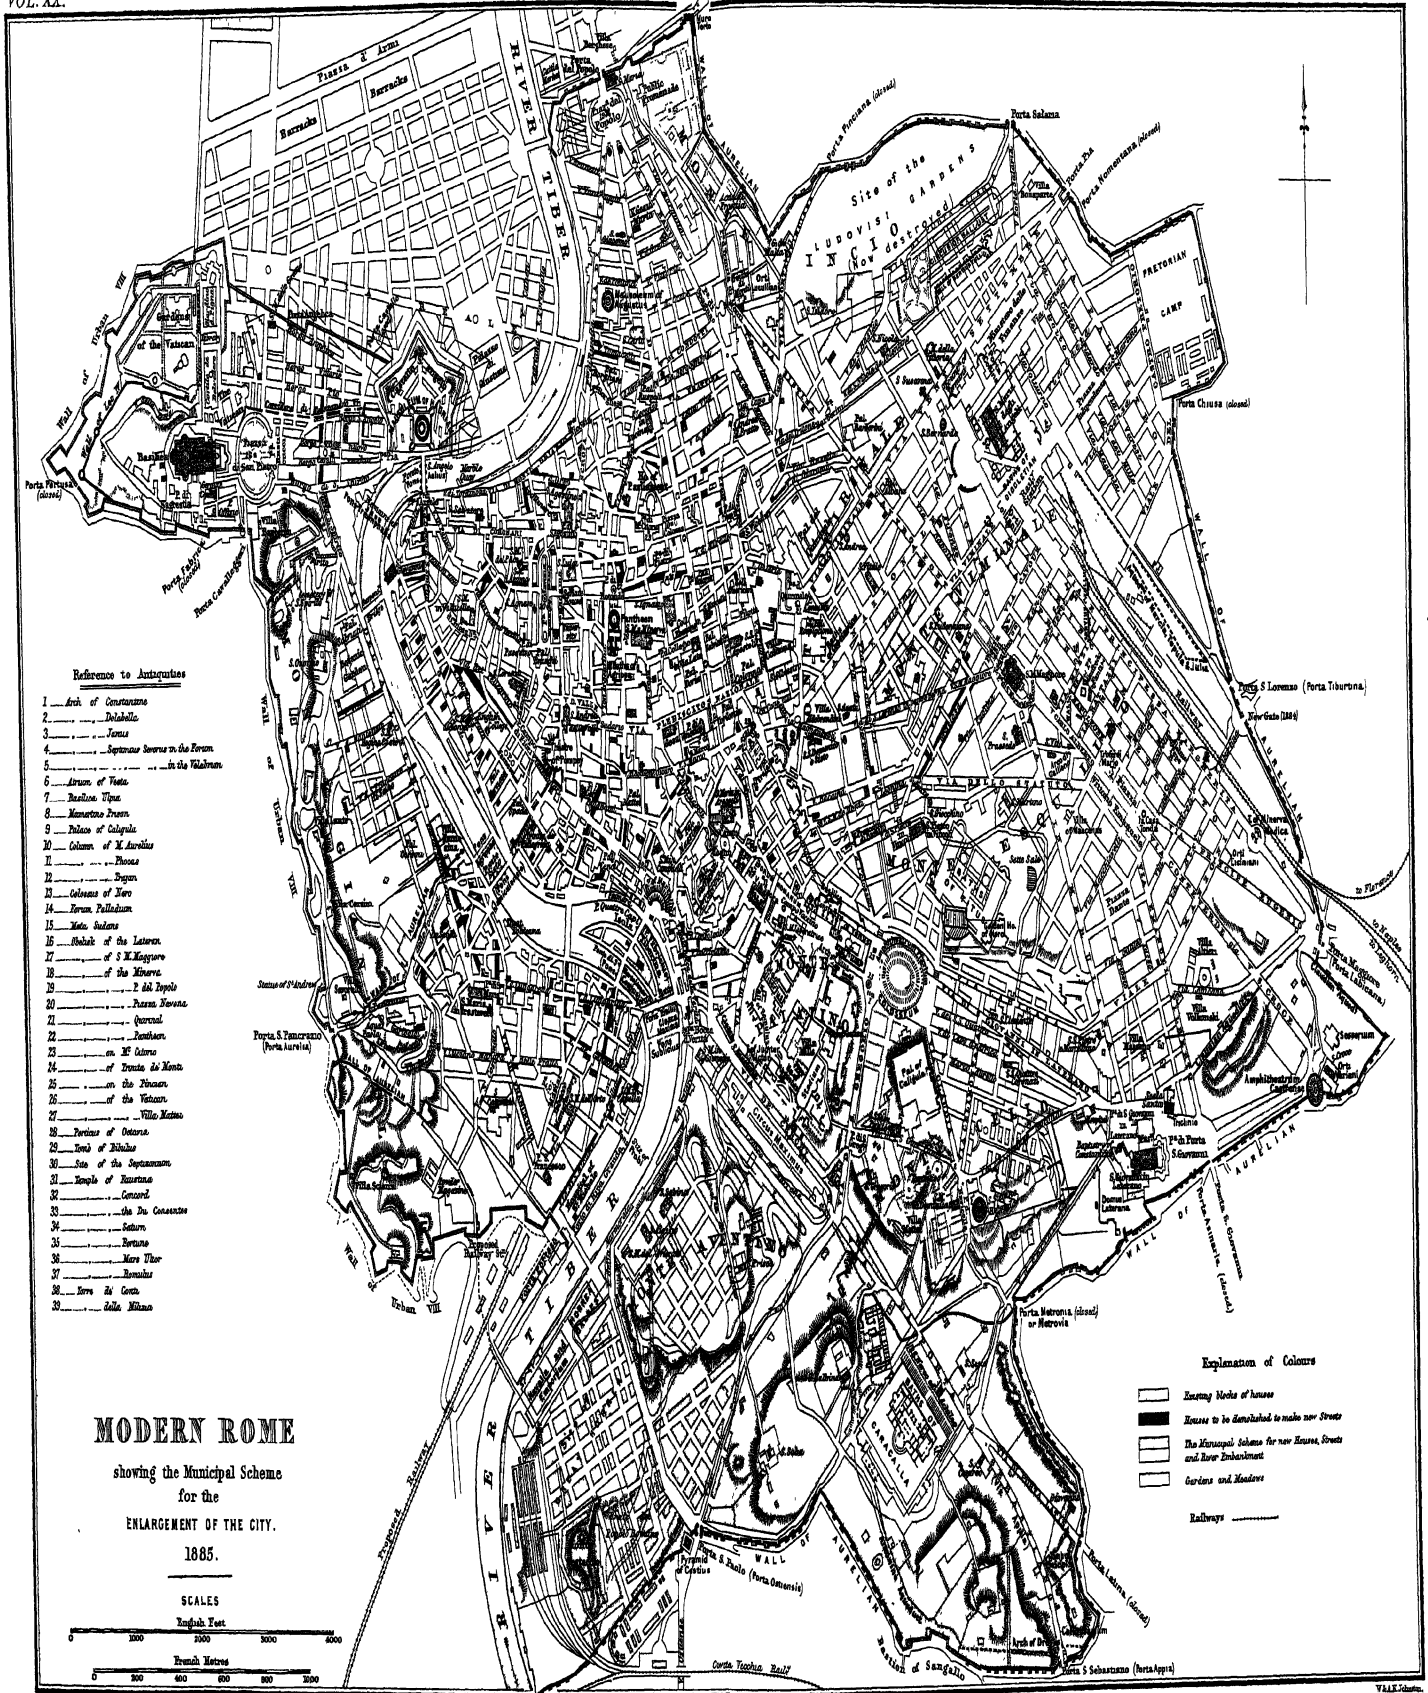

² The bridges were specially under the care of the pontifex maximus, at least till the later years of the republic (Varro, *L. L.*, v. 83).

³ See Fiale, *Antic. Pont.*, in *Atti d. Pont. Accad.*, 1881; and Becker, *De Muris et Portis*, Leipzig, 1842.

⁴ See Jordan, *For. Urb. Rom.*, Berlin, 1875. Besides the works of Preller, Jordan, and Uhlrichs, the regional catalogues of buildings are given by Nardini, *Rom. Ant.*, ed. Nibby, 1818-20, the whole of which valuable work is arranged in accordance with these lists.

⁵ Vopiscus, *Aurel.*, 21, 30; Zosimus, i. 37, 49; Eutrop., ix. 15.

⁶ The inscriptions run thus—S. P. Q. R. IMP. CAES. D. D. INVICTISSIMIS. PRINCIPIBVS. ARCADIO. ET HONORIO. VICTORIBVS. AC. TRIVMPHATORIBVS. SEMPER. AVGG. OB. INSTAVRATOS. VRBIS. AETERNAE. MVROS. PORTAS. AC. TVRRIS. EGESTIS. IMMENSIS. RVDERIBVS. . . .—the rest refers to honorary statues erected to commemorate this work.

foot of the Pincian Hill, is formed by remains of a lofty and enormously massive building, faced with fine opus reticulatum of the 1st century A.C. Owing to the sinking of the foundation this is very much out of the perpendicular, and was known as the "murus tortus" at a very early time.¹ What this once important building was is uncertain. It has been supposed to belong to the tomb of the Domitii (Suet., *Dom.*, 2), but on scanty grounds. Two archways which form gates in the Aurelian wall are of much earlier date. The Porta Maggiore consists of a grand triple arch of the Claudian aqueduct built in travertine. The P. S. Lorenzo is a single travertine arch, built by Augustus where the aqueduct carrying the Aqua Marcia, Tepula, and Julia crossed the Via Tiburtina. The inner gateway, built of massive travertine blocks by Honorius, was pulled down by Pius IX. in 1868 for the sake of the material.²

Literature.—Probably no archaeological subject has so copious a literature as that dealing with the topography of Rome; much of this, however, has been rendered obsolete by subsequent discoveries. The reader who wishes to study the subject in a fairly concise form will find the following books the most useful.³ Nardini, *Roma Antica*, ed. Nibby, 1818-20; Nibby, *Antichità di Roma*, 1830, and *Roma nell'Anno 1833*, 1839; Becker, *Handbuch der römischen Alterthümer*, Leipzig, 1843 (of special value from its numerous references to classical authors); Reber, *Die Ruinen Roms*, Leipzig, 1863; Bunsen and others, *Beschreibung der Stadt Rom*, Stuttgart, 1829-42, and the abridgment of this work by Platner and Uhlrichs, 1844; Von Reumont, *Geschichte der Stadt Rom*, Berlin, 1867-70; Jordan, *Topographie der Stadt Rom*, Berlin, 1871 (in progress, a work of great value); Burn, *Rome and the Campagna*, London, 1870 (by far the best work in English, both from its illustrations and very able text); Dyer, *The City of Rome*, London, new ed., 1888 (a compact work, useful for reference). The very large and magnificently illustrated works by Canina must be used with great caution; they contain imaginative restorations rather than accurate representations of what really exists; even those drawings which profess to give the existing remains are rendered of little value by their numerous inaccuracies. The chief of Canina's works are *Indicazione di Roma Antica*, 1830; *Esposizione topografica*, 1842; *Edifici di Roma Antica*, 1848-56; *Foro Romano*, 1845; and *Architettura Antica*, 1834-44.

The student who wishes to enter into the subject in detail and form independent opinions will have an enormous mass of literature to wade through. (1) First, of course, come various classical authors, frequently cited above; the *Monumentum Ancyranum*, ed. Mommsen, Berlin, 1883, and other ancient inscriptions. (2) Second in importance come various documents of the decadence and early Middle Ages:—the *Notitia* and *Cursus Urbis Romæ*, printed by Preller in his *Regionen der Stadt Rom*, Jena, 1846; the *Mirabilia Romæ*, ed. Parthey, Berlin, 1869; *Graphia Aureæ Urbis*, ed. Ozanam in *Documents inédits*, Paris, 1860; *Catalogus Viennensis Imp. Rom.*, published by Ecard; *Descriptio Regionum Romæ*, Einsiedeln MS., ed. Haenel in *Archiv für Philologie*, v. 115, Berlin, 1837; *Ordo Romanus*, ed. Fea in *Dissertationi*, &c., 1830; the *Codez Topog. Urbis Romæ*, ed. Uhlrichs, Würzburg 1871 (contains texts and extracts from other medieval sources); Paulus Diaconus, *Excerpta ex Lib. Pomp. Festi*, ed. Müller, Leipzig, 1839; Anastasius Bibliothecarius, *De Vitis Rom. Pont.*, ed. Branchini, 1718. The various commentators on Virgil known under the general name of *Servius* give many valuable notes on Roman topography; an excellent edition of these is being produced by Thilo and Hagen, Leipzig, 1881-85. (3) Thirdly we have a large number of works, mostly illustrated, produced from the 15th to the 18th century, the value of which is frequently very great from the fact that they describe a large number of ancient monuments which no longer exist. Some of these, especially those earliest in date, exist only in MS. in the libraries of the Vatican, the Uffizi, Milan, and elsewhere; a very valuable MS. of Ligorio (16th-century) is preserved in the Bodleian at Oxford. Among these MSS. are drawings of ancient buildings by Raphael, Bramante, Bramantino, Baldassare, Sallustio Peruzzi, Andrea Sansovino, Palladio, and in fact by nearly all the great architects of the 16th century.

Works of 15th and 16th Centuries.—Biondo, *Roma Ristaurata*, Venice, 1543 (MS. of 1431-89); Poggio, *De Fortuna Varietate* (MS. of about 1440), Basel, 1538; Bramantino, *Rovine di Roma* (MS., 1503-13, in Bibl. Ambros., Milan), ed. by Mongeri, Milan, 1875; Albertini, *Opus de Mirab. Urbis Romæ*, 1509; Pomp. Leto, *De Vestitus Urbis*, 1528; And. Fulvius, *Antiquaria Urbis*, Venice, 1527; Calvus, *Antiquæ Urbis Romæ Simulacrum*, 1532; Marlianus, *Urbis Romæ Topog.*, 1544; Palladio, *L'Architettura*, Venice, 1542, and *Le Terme dei Romani*, printed first in London, 1732; Serlio, *Architettura*, Venice, 1545, bk. iii.; Fauno, *Antichità di Roma*, 1545; Labacco, *Architettura ed Antichità*, 1557; L. Mauro, *Antichità di Roma*, Venice, 1558; Ligorio, *Effigies Antiq. Romæ*, 1561; Gamucci, *Antichità di Roma*, Venice, 1565; Dosius, *Urbis Romæ Edificia*, 1569; Du Perac, *Vestigii di Roma*, 1575; Fabricius, *Roma Antiq.*, 1587; Vacca, *Variæ Antichità*, 1594, printed in Nardini, ed. Nibby, in *Roma Antica*, vol. IV., 1818-20; Muralt, *Un Plan de Rome au XVme Siècle* (Soc. Nat. des Antiquaires), Paris, April 1880. *17th Century.*—Creschi, *Antichità di Roma*, 1601; Laurus, *Antiq. Pchnographia*, Lyons, 1863; good maps of ancient and modern Rome together are contained in the guides of Gsell-Fels, Baedeker, and Murray; an excellent map of ancient Rome is given by Burn, *Rome and the Campagna*, London, 1870.

CHRISTIAN ROME.

1. From the 4th to the 13th Century.

The era of church building in Rome may be said to begin with the reign of Constantine and the peace of the church. Before then IX.

Christian worship was conducted with various degrees of secrecy either in private houses or in the CATACOMBS (q.v.), according as the reigning emperor viewed the sect with tolerance or dislike. The type of church which in the beginning of the 4th century was adopted with certain modifications from the pagan basilica, though varying much in size, had little or no variety in its general form and arrangement. One fixed model was strictly adhered to for many centuries, and, in spite of numberless alterations and additions, can be traced in nearly all the ancient churches of Rome.

Fig. 26 shows a typical example, omitting all later changes.⁴ The plan is that of the lower church of S. Clemente, built in the 4th century, probably in the reign of Constantine; an existing inscription records its restoration by S. Siricius (384-398). The fittings, altar, choir-screen, &c., are not now *in situ*, but were moved into the upper church when that was built, between 1100 and 1118. They were then rather carelessly put together, and the proper positions of the gospel and the epistle ambo reversed. The figure shows these fittings replaced in the ancient church as they originally stood; they are rather later than the building itself, being made under Pope John, probably the second of that name (532-535); his monogram is sculptured on the marble slabs which form the low walls of the choir. In the 13th century ornaments of mosaic inlay were added on these 6th-century screens by one of the Cosmati. The baldacchino which now exists in the upper church is of c. 1100, but two of the columns of a much older canopy are preserved by being used in the construction of a fine 15th-century tomb near the high altar. These have richly carved caps of semi-classical style, and, as well as the high altar, have an inscription recording their gift to the church by the priest Mercurius in the pontificate of Hormisdas (514-523). The paintings of the 9th century, and even earlier, which cover the walls of the lower church are among the most important existing specimens of early Christian art.⁵

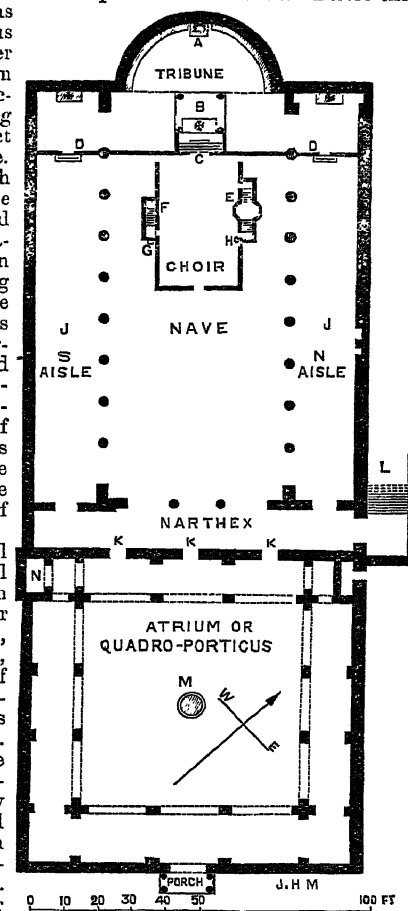

FIG. 26.—Plan of lower church of S. Clemente. A. Celebrant's throne in western apse. B. High altar and baldacchino. C. Stairs down to confessional. D, D. Side doors in screen. E. Gospel ambo. F. Epistle ambo. G. Lectern. H. Paschal candlestick. J, J. Aisles. K. Doors at east end. L. Stairs to upper church. M. Fountain of ablution. N. Campanile.

4 The plan of the upper church of S. Clemente is shown under BASILICA, fig. 18, vol. iii. p. 417; other plans of early basilicas are given in the same article.

5 See Mullooly, *S. Clement and his Basilica*, Rome, 1869; De Rossi, in *Bull. Arch. Crist.*, 1863, 1865, 1867, especially 1870, pt. iv.

¹ Procop., *Bell. Goth.*, i. 23.

² See Becker, *De Rom. Muris et Portis*, Leipzig, 1842; Nibby and Gell, *Le Mura di Roma*, 1820; Quarenghi, *Le Mura di Roma*, 1880; Burn, *Rome and the Campagna*, 1870, with other general works mentioned above.

³ In the list given above all books are printed in Rome unless otherwise described.

Typical plan.

The typical church was a simple rectangular building, with or without aisles, having a large apse at the west end, and at the east three doors opening from a cloister-like atrium; when space was limited three sides of the atrium were omitted, leaving only a long pillared narthex or porch which extended along the whole width of the nave. The apse or presbyterium, which was raised above the nave, contained a central marble throne for the celebrant and a long bench for the rest of the clergy. The high altar stood a little forward from the apse; and over it was a square canopy or baldacchino supported on four marble columns; each of the four arches of the canopy had a curtain, which was drawn close during the consecration of the elements; at other times these curtains were twisted round the four columns of the baldacchino. The celebrant stood with his back to the apse, looking eastwards towards the people over the altar.² The high altar stood over the tomb of some saint or confessor, hence called the "confessio"; this was so arranged as to be at least partly visible, and usually was reached by a few steps descending from the nave. In later times the confessio became frequently a spacious crypt containing a small altar of its own. At this point cancelli or marble screens ran across the whole width of the church, both nave and aisles; and hence the part thus railled off was called the "chancel." The choir occupied most of the western half of the nave, and was raised one step above it; it was completely surrounded by a low marble wall or screen, along two sides of which a marble bench was fixed. On the right³ was the gospel ambo, its marble book-rest usually distinguished by a sculptured eagle, and beside it the tall paschal candlestick. On the left was the epistle ambo.⁴ The font was frequently an ancient marble or porphyry bath, as in the Lateran baptistery and that of S. Maria Maggiore; but in early times an ordinary parish church had no font; baptisms were only performed in one or two of the great basilicas, and then in a separate building, usually octagonal in shape. In the centre of the open atrium stood a fountain for ablutions performed before entering the church, as in an Oriental mosque.

Con-
struction.

The walls of these early churches were mostly built of concrete, faced with brick, left structurally quite plain, and decorated only with painted stucco or glass mosaics,—especially (internally) in the apse and on the face of its arch, and (externally) on the east or entrance wall, the top of which was often built in an overhanging curve to keep off the rain. The windows were plain, with semicircular arches, and were filled with pierced marble screens, or in some cases with slabs of translucent alabaster; the latter was the case at S. Lorenzo fuori le Mura, and examples of the former still exist in the very early church formed in the rooms of some *thermae* on the Esquiline (possibly those of Trajan), below the 6th-century church of S. Martino ai Monti. Almost the only bit of external architectural ornament was the eaves cornice, frequently (as at the last-named church) formed of marble cornices stolen from earlier classical buildings. Internally the nave columns, with their capitals and bases, were usually taken from some classical building, and some churches are perfect museums of fine sculptured caps and rich marble shafts of every material and design.⁵ At first the nave had no arches, the columns supporting a horizontal entablature, as at S. Clemente, S. Maria Maggiore, and S. Maria in Trastevere, but afterwards, in order to widen the intercolumniation, simple round arches of narrow span were introduced, thus requiring fewer columns. The roof was of the simple tie-beam and kingpost construction, left open, but decorated with painting or metal plates. The floor was paved either with coarse mosaic of large tesserae (as at S. Pudenziana) or with slabs of marble stripped from ancient buildings. A later development of this plan added a small apse containing an altar at the end of each aisle, as in S. Maria in Cosmedin and S. Pietro in Vincoli.⁶

Circular
churches.

The type of church above described was used as a model for by the majority of early churches not only in Rome but also in England, France, Germany, and other Western countries. Another form was, however, occasionally used in Rome, which appears to have been derived from the round temple of pagan times. This is a circular building usually domed and surrounded with one or more rings of pillared aisles. To this class belong the combined church and mausoleum of Costanza (see fig. 27) and that of SS. Marcellinus and Petrus, both built by Constantine, the former to hold the tomb of his daughters Constantia and Helena, the latter that of his mother Helena. The latter is on the Via Labicana, about 2 miles outside

Rome; it is a circular domed building, now known as the Torre Pignattara, from the *pignatie* or amphorae built into the concrete dome to lighten it. The mausoleum of S. Costanza, close by S. Agnese fuori, is also domed, with circular aisle, or rather ambulatory, the vault of the latter decorated with mosaic or classical style (see MOSAIC, vol. xvi. p. 852). The red porphyry sarcophagi, sculptured richly with reliefs, from these mausolea are now in the Vatican. On a much larger scale is the church of S. Stefano Rotondo on the Coelian, built by Pope Simplicius (468-483), with a double ring of pillared aisles, the outer one of which was pulled down and a new enclosure wall built by Nicholas V. Other round churches are S. Teodoro (by the Vicus Tuscus), of the 8th century, and S. Bernardo, which is one of the domed halls of Diocletian's *thermae*, consecrated as a church in 1598.

FIG. 27.—Church and mausoleum of Costanza. A. Recess for altar. B. Porphyry slab in floor where the tomb stood. C. Modern altar. D, D. Slabs of white marble, part of ancient paving. E, E. Recesses with mosaics. F, F. Ambulatory with mosaic vault.

Space will not allow any individual description of the very numerous and important churches in Rome which are built on the above-described plan. The principal examples are these:⁷—S. Pudenziana, traditionally the oldest in Rome, rebuilt by Adrian I. (772-795); S. Sabina, 5th century; S. Vitale, 5th century, founded by Innocent I. (402-417); S. Martino ai Monti, 500; S. Balbina, 6th century; church of Ara Coeli, founded in 6th century as S. Maria in Capitolio; S. Giorgio in Velabro, rebuilt by Leo II. (682-683); S. Cesareo, 8th century; S. Maria in Via Lata, built by Sergius I. (687-701); S. Crisogono, rebuilt in 731 by Gregory III.; S. Maria in Cosmedin and S. Giovanni ad Portam Latinam, both rebuilt c. 772 by Adrian I.; S. Maria in Domnica, rebuilt by Paschal I. (817-824), who also rebuilt S. Cecilia in Trastevere c. 821 and S. Prassede in 822; S. Marco, rebuilt by Gregory IV. in 833; S. Maria Nuova, founded by Nicholas I. (858-867), now called S. Francesca Romana; S. Anastasia, founded in the 4th, rebuilt in the 10th century; S. Bartolomeo in Isola and the church of the Quattro Santi Incononati, built by Paschal II. about 1113; and S. Maria in Trastevere, rebuilt by Innocent II. in 1139.⁸

Though the apses and classical columns of the naves in these churches were built at the dates indicated, yet in many cases it is difficult to trace the existence of the ancient walls; the alterations and additions of many centuries have frequently almost wholly concealed the original structure. With the exception of S. Clemente, the early choir, placed as shown in fig. 26, has invariably been destroyed; the side walls have often been broken through by the addition of rows of chapels; and the whole church, both within and without, has been overlaid with the most incongruous architectural features in stucco or stone. The open roof is usually concealed either by a wooden panelled ceiling or by a stucco vault. The throne⁹ and marble benches in the apse have usually given place to more modern wooden fittings, to suit the later position of the choir, which has always been transferred from the nave to the apse. In many cases the mosaics of the apse and the columns of the nave are the only visible remains of the once simple and stately original church.¹⁰

2. From 1200 to 1450; and the Papal Palaces.

The 10th and 11th centuries in Rome were extraordinarily barren. Era of the in the production of all branches of the fine arts, even that of architecture; and it was not till the end of the 12th that any important revival began. The 13th century was, however, one of great artistic activity, when an immense number of beautiful works, especially in marble enriched with mosaic, were produced in Rome. This revival, though on different lines, was very similar to the rather later one which took place at Pisa (see PISA), and, like that, was mainly due to the great artistic talents of one family,—the

⁷ For the early church of SS. Cosmo e Damiano, see above, fig. 19.

⁸ This list does not include the great basilicas of Rome, for which see *BASILICA*, vol. iii. p. 412.

⁹ Some of these marble thrones which still exist are very interesting relics of Hellenic art, much resembling the existing seats in the theatre of Dionysius at Athens, whence probably some of those in Rome were brought in classical times. Examples of these Greek thrones exist at S. Pietro in Vincoli, S. Stefano Rotondo, and in the Lateran cloister.

¹⁰ See Nesbitt, "Churches in Rome earlier than 1150," in *Archæologia*, vol. xl., 1866.

¹ The complete atrium or quadro-porticus now very rarely exists; the churches of S. Prassede and S. Cecilia in Trastevere still have it in a modernized form, and so has the church of the Quattro Santi Incononati, which also possesses the triforium galleries, like those of S. Agnese fuori.

² The custom (adopted some centuries later) of the celebrant standing between the altar and the people necessitated a reversal of orientation, and the high altar was then placed at the east end.

³ "Right" and "left" are here used of one facing the high altar.

⁴ An analogous arrangement of the choir exists in most of the Spanish cathedrals, in which it occupies a great part of the nave.

⁵ S. Lorenzo and S. Agnese fuori, S. Maria in Trastevere, Ara Coeli, and numberless other churches are very rich in this respect.

⁶ G. G. Scott (*Church Architecture*, London, 1881) gives a valuable account of the arrangements of early churches; see also Hubsch, *Altchristlichen Kirchen*, Carlsruhe, 1862. The three apses are common in Eastern churches.

Cosmati,¹ seven members of which, for four generations, were skilful architects, sculptors, and mosaicists.

The following are the names and dates known from existing inscriptions:—

Lorenzo (born in the second half of the 12th century.

Jacopo (dated works 1205 and 1210).

Cosimo („ „ 1210-35).

Luca (1231 and 1235). Jacopo (1231-1293). Adeodato (1294). Giovanni (1296 and 1303).

Their principal works in Rome are:—ambones of S. Maria in Ara Coeli (Lorenzo); door of S. Saba, 1205, and door with mosaics of S. Tommaso in Formis (Jacopo); chapel of the Sancta Sanctorum, by the Lateran (Cosimo); pavement of S. Jacopo alla Lungara, and (probably) the magnificent episcopal throne and choir-screen in S. Lorenzo fuori le Mura, of 1254 (Jacopo the younger);² baldacchino of the Lateran and of S. Maria in Cosmedin, c. 1294 (Adeodato); tombs in S. Maria sopra Minerva (c. 1296), in S. Maria Maggiore, and in S. Balbina (Giovanni). A large number of other works by members and pupils of the same family, but unsigned, exist in Rome. These are mainly altars and baldacchini, choir-screens, paschal candlesticks, ambones, tombs, and the like, all enriched with sculpture and glass mosaic of great brilliance and decorative effect.

Besides the more mechanical sort of work, such as mosaic patterns and architectural decoration, they also produced mosaic pictures and sculpture of very high merit, especially the recumbent effigies, with angels standing at the head and foot, in the tombs of Ara Coeli, S. Maria Maggiore, and elsewhere. One of their finest works is in S. Cesareo; this is a marble altar richly decorated with mosaic in sculptured panels, and (below) two angels drawing back a curtain (all in marble) so as to expose the open grating of the confessor. The magnificent cloisters of S. Paolo fuori le Mura, built about 1285 by Giovanni, the youngest of the Cosmati, are one of the most beautiful works of this school. The baldacchino of the same basilica is a signed work of the Florentine Arnolfo del Cambio, 1285, "cum suo socio Petro," probably a pupil of the Cosmati. Other works of Arnolfo, such as the Braye tomb at ORVIETO (*q.v.*), show an intimate artistic alliance between him and the Cosmati. The equally magnificent cloisters of the Lateran, of about the same date, are very similar in design; both these triumphs of the sculptor-architect's and mosaicist's work have slender marble columns, twisted or straight, richly inlaid with bands of glass mosaic in delicate and brilliant patterns. The shrine of the Confessor at Westminster is a work of this school, executed about 1268 (see MOSAIC). The general style of works of the Cosmati school is Gothic in its main lines, especially in the elaborate altar-canopies, with their pierced geometrical tracery. In detail, however, they differ widely from the purer Gothic of northern countries. The richness of effect which the English or French architect obtained by elaborate and carefully worked mouldings was produced in Italy by the beauty of polished marbles and jewel-like mosaics,—the details being mostly rather coarse and often carelessly executed.

Campanili.

Chiefly to the 13th century belong the large number of beautiful campanili, which are the most conspicuous relics of the mediæval period in Rome. The finest of these are attached to the churches of S. Maria Nuova, SS. Giovanni e Paolo, and S. Maria Maggiore. Others belong to the basilicas of S. Lorenzo fuori and S. Croce in Gerusalemme, and to S. Giorgio in Velabro, S. Maria in Cosmedin, S. Alessio, S. Giovanni ad Portam Latinam, S. Cecilia, S. Crisogono, and S. Pudenziana. They occupy various positions with regard to the church, being all later additions; that of SS. Giovanni e Paolo stands at some distance from it. In design they are very similar, consisting of many stages, divided by brick and marble cornices; in the upper stories are from two to four windows on each side, with round arches supported on slender marble columns. They are decorated with brilliantly coloured *ciotole* or disks of earthenware, enamelled and painted in green or turquoise blue, among the earliest existing specimens of the so-called majolica (see POTTERY, vol. xix. p. 624 sq.). Sometimes disks or crosses made of red or green porphyry are inlaid in the walls. In most cases on one face of the top story is a projecting canopied niche, which once contained a statue or mosaic picture. The walls are built of fine neat brickwork. One campanile (that of S. Maria Maggiore), the largest and once the handsomest of all, has string-courses of enamelled and coloured terra-cotta. The slender columns of the windows have often proved insufficient to support the weight, and so many of the arches are built up.³

Though but little used for churches, the Gothic style, in its modified Italian form, was almost universally employed for domestic

architecture in Rome during the 13th and 14th centuries. Tufa⁴ Domestic or brick was used for the main walls, the lowest story being often architect-supported on an arcade of pointed arches and marble columns. The windows were usually formed of large marble slabs with trefoil-shaped heads or cusped arches. As a rule the upper stories projected slightly over the lower wall, and were supported on small ornamental machicolations. The top story frequently had an open loggia, with rows of pointed arches. When vaulting was used it also was of the pointed form, usually in simple quadripartite bays, with slightly moulded groin-ribs. The finest existing specimen of this style is the palace built about 1300 by Boniface VIII. (Gaetano family), enclosing the tomb of Cecilia Metella on the Via Appia, with a graceful little chapel within the precincts of the castle. This building is very worthy of study; the remaining part is well preserved. Many houses of this period, though generally much injured by alterations, still exist in Rome. They are mostly in out-of-the-way alleys, and, not being mentioned in any books, are seldom examined. The Ghetto and the quarter near the Ponte Rotto contain many of these interesting buildings, as well as some of the most crowded parts of the Trastevere district; all are rapidly disappearing under the wholesale destruction of old streets now in progress. Among those which may possibly escape for a while is the 13th-century house where Giulio Romano lived, near the Palazzo di Venezia, and the Albergo del Orso, at the end of the Via di Tordinona, of the same period, which was an inn in the 16th century and is one still; this has remains of a fine upper loggia, with rich cornices in moulded terra-cotta; the lowest story has pointed vaulting resting on many pillars. Another graceful but less stately house exists, though sadly mutilated, opposite the entrance to the atrium of S. Cecilia in Trastevere.⁵ Very few now remain of the once numerous lofty towers built by the turbulent Roman barons for purposes of defence. The finest, the Torre della Milizia on the Viminal, was built in the 13th century by the sons of Petrus Alexius; of about the same date is the Torre dei Conti, near the forum of Augustus, built by Marchione of Arezzo; both these were once much higher than they are now; they are very simple and noble in design, with massive walls faced with neat brickwork, much resembling that of the 2d century.

Till the 14th century the Lateran was the usual residence of the Lateran pope; this was once a very extensive building, covering four times palace. its present area. The original house is said to have belonged to the senator Plautius Lateranus in the reign of Nero; but the existing part on the line of the Aurelian wall is of the 3d century. This house, which had become the property of the emperors, was given by Constantine as a residence for S. Sylvester; it was very much enlarged at many periods during the next ten centuries; in 1308 a great part was burnt, and in 1586 the ancient palace was completely destroyed by Sixtus V., and the present palace built by Domenico Fontana. The Cappella Sancta Sanctorum (see list of Cosmati works) is the only relic of the older palace.⁶ The present palace has never been used as a papal residence; in the 13th century it was an orphan asylum, and is now a museum of classical sculpture and early Christian remains.

The Vatican palace also appears to have originated in a house which existed in the time of Constantine. This was rebuilt by Vatican. Innocent III. (c. 1200) and enlarged by Nicholas III. (1277-80). It did not, however, become the fixed residence of the popes till after the return from Avignon in 1377. In 1415 John XXIII. connected the Vatican and the castle of S. Angelo by a covered passage carried on arches. But little of the existing palace is older than the 15th century; Nicholas V. in 1447 began its reconstruction on a magnificent scale, and this was carried on by Sixtus IV. (Sistine chapel), Alexander VI. (Appartamenti Borgia), Julius II. and Leo X. (Bramante's cortile and paintings by Raphael), and Paul III. (Sala Regia and Cappella Paolina by Antonio da Sangallo). Sixtus V. and his successors built the lofty part of the palace on the east of Bramante's cortile. The Scala Regia was built by Bernini for Urban VIII., the Museo Pio-Clementino under Clement XIV. and Pius VI., the Braccio Nuovo under Pius VII., and lastly the grand stairs up to the cortile were added by Pius IX.

The Quirinal palace, now occupied by the king of Italy, is devoid The of architectural merit. It stands on the highest part of the hill, Quirinal, on the site of part of the baths of Constantine. This palace was begun in 1574, under Gregory XIII., by Flaminio Ponzio, and was completed by Fontana and Maderna under subsequent popes.

⁴ For many centuries wall-facing of small tufa stones was used, e.g. in the mediæval part of the Capitol; this was called "opera saracinesca" from its supposed adoption from the Saracens; it is largely employed in the walls and towers of the Leonine city, built by Leo IV. (848-852) to defend the Vatican basilica and palace against the inroads of the Moslem invaders. The greater part of this wall is now destroyed and built over, but a long piece with massive circular towers well preserved exists in the gardens of the Vatican.

⁵ The house of Crescentius, popularly called the "house of Rienzi," near the Ponte Rotto, is perhaps the sole relic of the domestic architecture of an earlier period,—the 11th century. Its architectural decorations are an extraordinary mixture of marble fragments of the most miscellaneous sort, all taken from classical buildings; it has a long but somewhat unintelligible inscription over the doorway.

⁶ The great mosaic in the adjacent apse is a modern copy of that which once decorated the triclinium of Leo III. (795-816).

¹ An excellent account of the Cosmati is given by Boito, *Architettura del Medio Evo*, Milan, 1880, pp. 117-182.

² The chief signed works of Jacopo and his brother Luca are at Anagni and Subiaco.

³ See De Montault, *Les Cloches de Rome*, Arras, 1872.

Ecclesi-
astical
Gothic.

The only important church in Rome which is wholly Gothic in style is S. Maria sopra Minerva, the chief church of the Dominican order. This was not the work of a Roman architect, but was designed by two Dominican friars from Florence—Fra Ristoro and Fra Sisto—about 1289, who were also the architects of their own church of S. Maria Novella. It much resembles the contemporary churches of the same order in Florence, having wide-spanned pointed arches on clustered piers and simple quadripartite vaulting. Its details resemble the early French in character.¹ It contains a large number of fine tombs; among them that of Durandus, bishop of Mende (the author of the celebrated *Rationale divinarum officiorum*), by Giovanni Cosmas, c. 1300, and the tomb of Fra Angelico, the great Dominican painter, who died in Rome, 1455. The most elaborate specimen of ecclesiastical Gothic in Rome is that part of S. Maria in Ara Coeli which was rebuilt about 1300, probably by one of the Cosmati, namely, the south aisle and transept. For at least two centuries after the death of Giovanni Cosmas no native Roman appears to have excelled in any branch of the fine arts. The sculptured effigy and reredos of Cardinal Alençon in S. Maria in Trastevere, executed about 1400 by a certain Paulus Romanus, is a fair example of the decadence which took place during this period; the effigy is a very clumsy and feeble copy of the fine recumbent figures of the Cosmati.

3. Florentine Period, c. 1450-1550.

The long period of almost complete artistic inactivity in Rome was broken in the 15th century by the introduction of a number of foreign artists, chiefly Florentines, who during this and the succeeding century enriched Rome with an immense number of magnificent works of art. The dawn of this brilliant epoch may be said to have begun with the arrival of Fra Angelico (see FIESOLE) in 1447, invited by Nicholas V. to paint the walls of his small private chapel in the Vatican dedicated to S. Lorenzo.

Mino da
Fiesole.

To Mino da Fiesole (see MINO DI GIOVANNI, vol. xvi. p. 477), who spent several years in Rome between 1470 and 1484, and other Florentine sculptors are due almost all the very beautiful sculptured tombs which were made for a large number of the Roman churches during the last thirty years of the 15th century, as well as many altar frontals, reredoses, tabernacles, and the like. Though varied in details, most of these tombs are designed after one type, that employed by Mino in his fine monuments in the Badia at Florence. A life-sized recumbent effigy lies on a richly ornamented sarcophagus, over which is an arched canopy decorated with reliefs; the piers which support this (usually) have statuettes in two or more tiers. For grace and refined beauty no type of sepulchral monument has ever equalled this Florentine design. The peaceful attitude and calm face of the effigy are frequently of the most perfect beauty, and the minute statuettes and reliefs are finished with ivory-like delicacy. Though the influence of Mino, very strongly marked, may be traced in all these numerous works (there are in Rome more than a hundred tombs of this class), yet a very small proportion can be actually by his hand. Mino created and trained a large school of sculptor-pupils in Rome, some of whom appear almost to have equalled their master in skill; and it is to them that most of these works must be referred. A very long list of churches containing sculpture of this class might be given; perhaps the richest are S. Maria in Monserrato (the cloisters) and S. Maria del Popolo.²

The architecture no less than the sculpture of the latter part of the 15th century was mainly the work of Florentines, especially of Baccio Pintelli, who partly rebuilt S. Maria del Popolo, S. Agostino,³ and S. Cosimato in Trastevere. He also was the architect of S. Pietro in Montorio, erected in 1500 for Ferdinand and Isabella of Spain, and probably designed the Sistine chapel for Sixtus IV. in 1478. Other buildings were carried out by another Florentine, Giuliano da Majano (see Ferrerio, *Palazzi di Roma*, 1825). The Palazzo di Venezia, begun for Cardinal Barbo, afterwards Paul II., about 1455, a very massive and stately building of mediæval character, was designed by Francesco di Borgo San Sepolcro.

Bra-
mante.

During the latter part of the 15th and the first few years of the succeeding century Rome was enriched with a number of buildings by BRAMANTE (*q.v.*), one of the greatest architects the world has ever seen. With the most consummate skill, he combined the delicacy of detail and the graceful lightness of the Gothic style with the measured stateliness and rhythmical proportions of classic architecture. Though he invariably used the round arch and took his mouldings from antique sources, his beautiful cloisters and loggie are Gothic in their general conception. Moreover, he never committed the prevalent blunder of the 16th century, which was a fruitless attempt to obtain magnificence by mere size in a building, without multiplying its parts. His principal works in Rome are the magnificent Palazzo della Cancelleria, built for Cardinal

Riario in 1495, with its stately church of S. Lorenzo in Damaso; the so-called Palazzo di Bramante in the Governo Vecchio, built in 1500; and the Palazzo Giraud, near St Peter's, once the residence of Cardinal Wolsey, built in 1506. He also built the cortile of S. Damaso in the Vatican, the toy-like tempietto in the cloister of S. Pietro in Montorio, and the cloisters of S. Maria della Pace, 1504.⁴ In 1503 Bramante was appointed architect to St Peter's, and made complete designs for it, with a plan in the form of a Greek cross. The piers and arches of the central dome were the only parts completed at the time of his death in 1514, and subsequent architects did not carry out his design. For St Peter's, see ARCHITECTURE, vol. ii. p. 438 and plates XXII., XXIII.; also BASILICA, vol. iii. p. 415 *sq.*

Baldassare PERUZZI (*q.v.*) of Siena was one of the most talented Peruzzi architects of the first part of the 16th century; the Villa Farnesina and the Palazzo Vidoni (usually attributed to Raphael) are from his designs.⁵ His later works bear traces of that decadence in taste which so soon began, owing mainly to the rapidly growing love for the dull magnificence of the pseudo-classic style. This falling off in architectural taste was due to MICHELANGELO (*q.v.*) more than to any other one man. His cortile of the Farnese palace, though a work of much stately beauty, was one of the first stages towards that lifeless scholasticism and blind following of antique forms which were the destruction of architecture as a real living art, and in the succeeding century produced so much that is almost brutal in its coarseness and neglect of all true canons of proportion and scale. During the earlier stage, however, of this decadence and throughout the 16th century a large number of fine palaces and churches were built in and near Rome by various able artists, such as the Villa Madama by Raphael, part of the Palazzo Farnese by Antonio da Sangallo the younger, S. Giovanni de' Fiorentini by Jac. Sansovino, and many others.⁶

4. Modern Period.

Under Vignola (1507-1573), Carlo Maderna (1556-1639), Bernini Period of (1598-1680), Carlo Fontana (1634-1714), and others architectural degradation in Rome steadily declined, till the prevalent style became tion.

a more caricature of classical forms, twisted and contorted into every possible incongruous and ridiculous shape, void of all sense of harmony of proportion and unredeemed by any grace or even decency of detail. Clumsy weightiness and extravagance of outline, with the frequent introduction of the most ungraceful curves, are the main characteristics of this unhappy period, which, unfortunately, was one of great activity in building. The degraded taste of the 17th and 18th centuries could see no beauty in the stately simplicity of the early basilicas, in the delicate grace and rich ornament of the Cosmati period, or even in the refined harmonious beauty of the Renaissance.⁷ Every church in Rome is more or less disfigured inside with extravagant stucco pilasters and reliefs, transfiguring the whole interior, while outside many have clumsy façades stuck on without the slightest reference to the structures they are meant to decorate. The Lateran basilica is one of the most conspicuous instances of this sad treatment of a grand old building; and the hideous façades which disfigure the fine churches of S. Marcello and S. Maria in Via Lata (both in the Corso) are typical examples of the degradation into which architecture had sunk in its latest stages. In the present century taste Nine has somewhat improved. Since 1870, when Rome became the twentieth capital, an immense amount of building has been carried out, century mostly innocent in design, though dull and lifeless. The modern build- architects of Rome possess the rare merit of acknowledging their ings. own artistic incapacity, and the more important recent buildings have been copies, fairly faithful in design though not in material, of fine palaces of the best 15th and 16th century architects. The Cassa di Risparmio in the Corso and some large houses in the new quarter across the Tiber are good copies of the Strozzi and other Florentine palaces; the Hotel Bristol is from a fine palace at Venice; and Bramante's Palazzo Giraud has been imitated in a new house near the Piazza Nicotia. Unfortunately stucco is mainly used for the exteriors of these otherwise handsome buildings, a material which, however, lasts fairly well in the mild climate of Rome. The growing rage for the Parisian style of building, with wide straight boulevards, is rapidly destroying all the picturesqueness of the city; and these broad streets, from their want of shade, are not suited to an almost constantly sunny climate.

The chief architectural work of the 19th century has been

⁴ The upper story of the latter is varied by having horizontal lintels instead of arches on the columns.

⁵ There appears now to be some doubt whether the Farnesina may not have been designed by Raphael; an original sketch by Peruzzi's own hand of the Palazzo Vidoni is preserved in the Uffizi.

⁶ A valuable account of Raphael's architectural works is given by Geymüller, *Raffaello come Architetto*, Milan, 1882. Drawings of many of the finest palaces of Rome are given by Percier and Fontaine, *Édifices modernes à Rome*, Paris, 1795; and especially in the fine work by Létarouilly, *Édifices de Rome moderne*, Brussels, 1856-66.

⁷ Even the frescos of the chief earlier artists were not spared; those by Pinturicchio in the 3d chapel (south) of S. Maria del Popolo were covered by wretched stucco ornaments, only removed in 1850; and numberless works of art by Giotto and other early painters were wilfully destroyed.

¹ The absence of a triforium is one of the chief reasons why the large Gothic churches of Italy are so inferior in effect to the cathedrals of France and England.

² It would be easy to double the list given in Perkins's valuable *Handbook of Ital. Sculpt.*, London, 1888, p. 417. Drawings of many of these are published by Tosi, *Monumenti Sacri*, &c., 1843.

³ These two churches were the first in Rome built with domes after the classical period.

the rebuilding of the nave of the great basilica of S. Paolo fuori le Mura, burnt in 1823, in a style of great splendour, though somewhat cold in effect. Its columns are enormous monoliths of grey granite from the Alps; the confesso and transepts are lined with rosso and verde antico from the recently rediscovered quarries in Greece, and with Egyptian alabaster. The reconsecration of this magnificent edifice took place in 1854, after thirty years had been spent in the rebuilding; the east façade, with its new gaudy mosaics, and the atrium are not yet complete.¹ Another great work still in progress is the extension of the sanctuary of the Lateran basilica, which unhappily has involved the destruction of the ancient apse and its ambulatory, the only part of the church which had escaped complete disfigurement. The priceless mosaics of the apse (1290), among the most beautiful in Rome, have been refixed in the new apse, but of course in a sadly modernized and restored form.² Some large blocks of Government offices on the Esquiline Hill are the most important in size among the recent constructions. They have little architectural merit either in design, materials, or solidity of workmanship.

Museums and galleries. The Vatican contains the largest collection in the world of Græco-Roman and Roman sculpture, with a few specimens of true Hellenic art. It is also very rich in Greek vases and in objects from Etruscan tombs; this latter division is called the Museo Gregoriano. There is also an Egyptian museum. In the great library are preserved a number of early glass chalices³ and other rare objects from the catacombs, as well as many fine specimens of later Christian art,—church plate and jewels. The picture gallery, though not as large as some of the private collections in Rome, contains few inferior pictures. The Lateran palace, still, like the Vatican, in the possession of the pope, contains a fine collection of classical sculpture, but is most remarkable as a museum of Christian antiquities. The two Capitoline museums are very rich in classical sculpture, bronzes, coins, pottery, and the contents of early Etruscan and Latin tombs. A large hall has lately been added, and is filled with sculpture found on the Esquiline since 1870. The picture gallery contains a few masterpieces and a large number of inferior works. A new museum is now (1886) being formed in the great cloister of S. Maria degli Angeli to hold the numerous fine examples of classical painting and sculpture found along the Tiber during the excavations for the new embankment, and in other places in Rome. The university of Rome possesses fine collections of minerals, fossils, and other geological specimens, and examples of ancient marbles used in the buildings of Rome. A new Museo Artistico has recently been formed in a monastery in the Capo le Case, to contain mediæval works of art; it will probably be rapidly increased. The Museo Kircheriano is in some respects unique of its kind. It contains an unrivalled collection of prehistoric objects found in Italy and its islands, in stone, bronze, iron, and pottery. The collection of æs grave is the finest yet made; and the museum also contains a large quantity of interesting classical antiquities of various kinds. Another branch is the Ethnological Museum, as yet of no great importance. Unfortunately all these museums are badly adapted for purposes of study, being neither well arranged nor catalogued.

Private collections of pictures; Among the private collections of pictures the Borghese is quite unrivalled. The next in importance is that in the Doria palace, which, however, like most Italian collections, contains a large proportion of very inferior works. The Corsini picture gallery, lately bought by the municipality of Rome, is chiefly rich in the works of the Bolognese and other third-rate painters. The Barberini and Sciarra-Colonna palaces contain a few fine paintings; those in the latter collection are now arranged in the owner's private apartments, and are not visible to the public.

of sculpture. The largest private collection of sculpture is that of the Villa Albani, which, among a large mass of inferior Roman sculpture, contains a few gems of Greek art. The original Albani collection was stolen and brought to Paris by Napoleon I., and was there dispersed; one relief, the celebrated Antinous, is the only piece of sculpture from the original collection which was sent back from Paris. The owner of this is now Prince Torlonia, who also possesses a very large collection of classical sculpture formed by himself; it contains several very fine works, but unfortunately the greater number are much injured and falsified by restorations. The casino in the Borghese gardens possesses a great quantity of sculpture, mostly third-rate Roman works. The small collection of the Villa Ludovisi⁴ contains a few works of Greek sculpture of the highest importance, of which the chief are the Pergamean group of the suicide of the Gaulish chief, a relief of Medusa's head, and a male terminal figure. Many other palaces, such as that of the Colonna family, contain less important collections of sculpture and painting.

Libraries. For an account of the chief public libraries, see LIBRARIES, vol. xiv. pp. 529-530, 548.

¹ Fea, *La Basilica Ostiense*, 1826-33.

² For the interesting discoveries made in excavating for the new apse, see *Ann. Inst.*, 1877, p. 332.

³ See Garrucci, *Patris Ornati in Oro*, 1888.

⁴ The beautiful gardens of the Villa Ludovisi are now (1886) being destroyed and built over, and the fate of the sculpture gallery is as yet undecided.

Population, Climate, &c.⁵—In the sixteen years which have elapsed since Rome became the capital of Italy (1870-1886) the population has largely increased, chiefly owing to the introduction of a great number of Government officials with their families from Northern Italy. Under the last papal census the number of inhabitants was 216,000; in 1881 it had increased to 276,463. Education of the working classes has much improved in these years, and there are now nearly 170 parochial schools. The streets are remarkable for their cleanliness, and are mostly well paved with hard lava and well lighted with gas. For municipal purposes Rome is still divided into the fourteen mediæval "rioni"; these, though corresponding in number with the fourteen regiones of Augustus, include very different areas. The climate is mild and sunny, in winter averaging 10° Fahr. above the temperature of London; but the variation between day and night is very great. The coldest months are December and February (average temp. 47°); the hottest are July and August (average 75°). The rainfall is slight, averaging 16½ inches annually, and the rainy days are few proportionally. On the whole Rome is a healthy city, in spite of some malaria, usually confined to its more open parts.⁶ The neighbouring Campagna is in parts almost uninhabitable during the summer from this cause; but the malaria is much checked by the planting of eucalyptus trees, which grow rapidly in and about the city. A very remarkable instance of this is the Trappist monastery of the Tre Fontane, about 4 miles from Rome on the Ostian road, which a few years ago was quite uninhabitable in the summer, while since a number of these trees have been planted the monks reside there with impunity throughout the year. Though almost free from typhus, there is a good deal of enteric fever in Rome, partly owing to the very unwholesome arrangement of the drainage in each house, though the general system of sewerage is good. That this disease is not more prevalent is probably owing to the magnificent water-supply,⁷ which flows in a constant service, thus doing away with the necessity of cisterns. The average annual deaths are 5750.

Paolo* (1878), and *Muscoli delle Chiese di Roma* (1870); Valentini, fine monographs on the *Basilicas of the Vatican*, the *Lateran*, and *S. Maria Maggiore*, 1832-45; Gori, *Bas. di S. Lorenzo*, 1862; Hübsch, *Alt-christlichen Kirchen*, Karlsruhe, 1862; De Montault, *Les Souverains de S. Pierre*, Paris, 1866; Burckhardt, *De Origine Basilicarum Christianarum*, 1875; De Fleury, *Le Latran*, Paris, 1877; De Lorbac, *S. Pierre de Rome*, 1879; Geymuller, *Les Projets Préliminaires pour la Bas. de S. Pierre*, Paris, 1875-80 (gives a valuable series of facsimiles of the designs made by Bramante, Raphael, Fra Giocondo, Sangallo, and others); Létourneux, *Le Vatican et la Basilica de S. Pierre*, ed. Sinitz, Paris, 1882; Debeser, *Rome et ses Monuments*, 1882 (especially useful to the Catholic traveller for its information about church ceremonies and other religious matters). GENERAL WORKS.—Pistoletti, *Il Vaticano*, 1829-35; Nibby, *Roma Moderna*, 1839; Marchi, *Mon. dell' Arte Crist. primitiva*, 1844; Massimo, *La Torre Anguillara in Trastevere*, 1847; Létourneux, *Édifices de Rome Moderne*, Brussels, 1856-66; Gregorovius, *Geschichte . . . Roms im Mittelalter*, Stuttgart, 1859-72, and *Die Grabmäler der Päpste*, Leipzig, 1867 (both these valuable works have been translated into Italian); Garrucci, *Mon. del Mus. Lateran.*, 1861, and *Storia dell' Arte Cristiana*, Prato, 1872-80; De Rossi, *Roma Sotterranea*, 1864-80, and *Muscoli e Pavimenti delle Chiese di Roma* (in progress), and (edited by him) *Bull. di Archeol. Cristiana*, 1863 (in progress), also *Inscriptiones Christianæ Urbis Romæ*, 1861 (in progress); Gerbet, *Rome Chrétienne*, Paris, 1866; Pellegrini, *Édifici dei Bassi Templi*, 1870; Rio, *L'Art Chrétien*, Paris, 1861, and *Épilogue à l'Art Chrétien*, 1872; Dohme, *Kunst und Künstler Italiens*, Leipzig, 1878; Wey, *Description de Rome* (well illustrated), 1871. *Inscriptions.*—Forelli, *Inscriptioni nelle Chiese di Roma*, 1869-84; Galetti, *Inscriptiones Rom. Infimæ Aevi*, 1760. A number of mediæval wall-paintings in Rome, such as those in the Vatican library and in S. Martino ai Monti, though worthless as works of art, are very valuable for their representations of buildings now destroyed or altered. The great oil-painting, now in the museum at Mantua, which gives a bird's-eye view of Rome as it was in the 16th century, is published in the valuable work by De Rossi, *Piante di Roma antenori al Sec. XVI.*, 1879, which contains also other early plans and drawings of the city. **MUSEUMS AND SCULPTURE.**—Pistoletti, *Il Vaticano*, 1829-35; Visconti, *Mus. Chiamarotti and Pio-Clementino*, and *Museo Gregoriano*, 1808-43; Wolf, *Bildwerke des Vaticans*, &c., Berlin, 1870; E. Q. Visconti, *Sculpture della Villa Borghese*, 1796, and *Scult. del Pal. Giustiniani*, 1811; Winckelmann, *Opere*, best edition by Fea, Prato, 1880; Vitale, *Marmi nel Pal. Torlonia*, n.d.; Benndorf, *Die Bildwerke des Lateran. Mus.*, Leipzig, 1867; Schreiber, *Antike Bildwerke der Villa Ludovisi*, Leipzig, 1880; Bottari, *Museo Capitolino*, Milan, 1821-22; Matz and Von Duhn, *Antike Bildwerke in Rom*, Leipzig, 1881; De Montault, *Musées et Galeries de Rome*, 1880; Bernoulli, *Römische Ikonographie*, Stuttgart, 1881. (J. H. M.)

⁵ See Taussig, *The Roman Climate, Health, and Disease*, 1870. The *Monografia di Roma* (1878) contains valuable articles on the population, climate, health, and public institutions of Rome.

⁶ See Balestra, *L'Igiene di Roma*, 1880; Vitelleschi and others, *Atti della Giunta per la Inchiesta Agraria*, vol. xi., 1884 (see also their map showing the malarious districts, 1883); Tournon, *Études Statistiques sur Rome*, Paris, 1881.

⁷ The numberless fountains and jets of water which abound in the streets of Rome are one of its chief beauties; these are all fed with pure hill water brought in aqueducts or pipes, and flow in apparently undiminished volume during the dry months of summer. The Trevi fountain (Aqua Virgo) and the Fontana Paola on the Janiculum are the grandest of these; see Falda, *Le Fontane di Roma*, 1691.

Plate VI. is a Map of the Empire in the Third Century of our Era; Plate VII. is a Plan of Ancient Rome; Plate VIII. shows the Forum and its Surroundings; and Plate IX. is the Modern City.

ROME, a city of the United States, the capital of Oneida county, New York, 110 miles by rail west-north-west of Albany, occupies a level site at the head of Mohawk valley, near the watershed between the Atlantic and the western lakes. It is an important railway junction, lies on the line of the Erie Canal, and is the terminus of the Black River Canal. Besides being the centre of a great cheese-making district, Rome has large railroad shops, rolling-mills, and lumber-yards. The population was 11,000 in 1870 and 12,194 in 1880.

ROMFORD, an old market-town of Essex, is situated on the small river Rom, and on the Great Eastern Railway about 12 miles east-north-east of London. The ancient church of St Edward the Confessor was replaced in 1850 by a structure in the Late Decorated style. The large brewery of Ind, Coope, & Co. is situated in the town, and there are extensive market gardens in the neighbourhood. A grant of a market was obtained in 1247, and this is still of importance as regards both cattle and corn. The population of the urban sanitary district (area 1159 acres) in 1871 was 6512, and in 1881 it was 7176.

ROMILLY, SIR SAMUEL (1757-1818), the great legal reformer who first attempted to relax the barbarity of the English penal code, was the second son of Peter Romilly, a watchmaker and jeweller in London, whose father had emigrated from Montpellier after the revocation of the edict of Nantes, and who had married a Miss Garnault, a

Huguenot refugee like himself, but of a far wealthier family. Samuel Romilly was born in Frith Street, Soho, on 1st March 1757, and was named after Sir Samuel Fludyer, M.P. for the city of London and alderman, who was in partnership with two of his uncles. He served for a time in his father's shop; but his education was not neglected, and he became a good classical scholar and particularly conversant with French literature. A legacy of £2000 from one of his mother's relations led to his being articled to a solicitor and clerk in Chancery with the idea of qualifying himself to purchase the office of one of the six clerks in Chancery. In 1778, however, he determined to go to the bar, and entered himself at Gray's Inn. He went to Geneva in 1781, where he made the acquaintance of the chief democratic leaders, including Étienne Dumont. Called to the bar in 1783, he went the midland circuit, but was chiefly occupied with Chancery practice. On the publication of Madan's *Thoughts on Executive Justice*, advocating the increase of capital punishments, he at once wrote and published in 1786 *Observations on Madan's book*. Of more general interest is his intimacy with the great Mirabeau, to whom he was introduced in 1784 (see MIRABEAU). Mirabeau saw him daily for a long time and introduced him to Lord Lansdowne, who highly appreciated him, and, when Mirabeau became a political leader, it was to Romilly that he applied for an account of the procedure used in the English House of Commons. He visited Paris in 1789, and studied the

course of the Revolution there; and in 1790 he published his *Thoughts on the Probable Influence of the Late Revolution in France upon Great Britain*, a work of great power. His practice at the Chancery bar continued largely to increase, and in 1800 he was made a K.C. In 1798 he married the daughter of Francis Garbett of Knill Court, Herefordshire; and in 1805 he was appointed chancellor of the county palatine of Durham. His great abilities were thoroughly recognized by the Whig party, to which he attached himself; and in 1806, on the accession of the ministry of "All the Talents" to office, he was offered the post of solicitor-general, although he had never sat in the House of Commons. He accepted the office, and was knighted and brought into parliament for Queenborough. He went out of office with the Government, but remained in the House of Commons, sitting successively for Horsham, Wareham, and Arundel. It was now that Sir Samuel Romilly commenced the greatest labour of his life, his attempt to reform the criminal law of England, which was at once cruel and illogical. By statute law innumerable offences were punished by death, but, as such wholesale executions would be impossible, the larger number of those convicted and sentenced to death at every assizes were respited, after having heard the sentence of death solemnly passed upon them. This led to many acts of injustice, as the lives of the convicts depended on the caprice of the judges, while at the same time it made the whole system of punishments and of the criminal law ridiculous. Romilly saw this, and in 1808 he managed to repeal the statute 8 Eliz. c. 4, which made it a capital offence to steal from the person. This success, however, raised opposition, and in the following year three bills repealing equally sanguinary statutes were thrown out by the House of Lords under the influence of Lord Ellenborough. Year after year the same influence prevailed, and Romilly saw his bills rejected; but his patient efforts and his eloquence ensured victory eventually for his cause by opening the eyes of Englishmen to the barbarity of their criminal law. The only success he had was in securing the repeal, in 1812, of the statute 39 Eliz. c. 17, making it a capital offence for a soldier or a mariner to beg without a pass from a magistrate or his commanding officer. Sir Samuel Romilly's efforts made his name famous not only in England but all over Europe, and on 4th July 1818 he had the honour of being returned at the head of the poll for the city of Westminster. He did not long survive his triumph. On the 29th of October 1818 Lady Romilly died in the Isle of Wight. Her husband's grief was intense, and he committed suicide in a fit of temporary insanity on the 2d November. No man of his time was more loved than Sir Samuel Romilly; his singularly sweet nature, his upright manliness, his eloquence, and his great efforts on behalf of humanity secured him permanent fame. His second son John rivalled his reputation as a lawyer, and after being appointed master of the rolls in 1851, an office which he held for twenty-two years, was raised to the peerage as Lord Romilly in 1866.

See the *Memoirs of the Life of Sir Samuel Romilly written by himself, with a selection from his Correspondence, edited by his Sons*, 3 vols., 1840; and *The Speeches of Sir Samuel Romilly in the House of Commons*, 2 vols., 1820.

ROMNEY, GEORGE (1734–1802), historical and portrait painter, was born at Dalton-le-Furness, Lancashire, on December 26, 1734. His father was a builder and cabinet-maker of the place, and the son, having manifested a turn for mechanics, was instructed in the latter craft, showing considerable dexterity with his fingers, executing carvings of figures in wood, and constructing a violin, which he spent much time in playing. He was also busy with his pencil; and, some of his sketches of the neighbouring

rustics having attracted the attention of his father, he was at length induced to apprentice the boy, at the age of nineteen, to an itinerant painter of portraits and domestic subjects named Steele, an artist who had studied in Paris under Vanloo; but the erratic habits of his instructor prevented Romney from making great progress in his art. In 1756 he impulsively married a young woman who had nursed him through a fever, and started as a portrait painter on his own account, travelling through the northern counties, executing likenesses at a couple of guineas, and producing a series of some twenty figure compositions, which were exhibited in Kendal, and afterwards disposed of by means of a lottery.

Having, at the age of twenty-seven, saved about £100, he left a portion of the sum with his wife and family, and started to seek his fortune in London, never returning, except for two brief visits, till he came, a broken-down and aged man, to die. In London he rapidly rose into popular favour. His *Death of General Wolfe* was judged worthy of the second prize at the Society of Arts, but a word from Reynolds in praise of Mortimer's *Edward the Confessor* led to the premium being awarded to that painter, while Romney had to content himself with a donation of £50, an incident which led to the subsequent coldness between him and the president which prevented him from exhibiting at the Academy or presenting himself for its honours.

In 1764 he paid a brief visit to Paris, where he was befriended by Joseph Vernet; and his portrait of Sir Joseph Yates, painted on his return, bears distinct traces of his study of the works of Rubens then in the Luxembourg Gallery. In 1766 he became a member of the Incorporated Society of Artists, and three years later he seems to have studied in their schools. Soon he was in the full tide of prosperity. He removed to Great Newport Street, near the residence of Sir Joshua, whose fame in portraiture he began to rival in such works as *Sir George* and *Lady Warren*, and *Mrs Yates as the Tragic Muse*; and his professional income rose to £1200 a year.

But he was seized with a longing to study in Italy; and in the beginning of 1773 he started for Rome in company with Ozias Humphrey the miniature painter. On his arrival he separated himself from his fellow traveller and his countrymen, and devoted himself to solitary study, raising a scaffold to examine the paintings in the Vatican, and giving much time to work from the undraped model, of which his painting of a *Wood Nymph* was a fine and graceful result. At Parma he concentrated himself upon the productions of Correggio, which powerfully fascinated him, and greatly influenced his practice.

In 1775 Romney returned to London, establishing himself in Cavendish Square, and resuming his extensive and lucrative employment as a portrait-painter, which in 1785, according to the estimate of his pupil Robinson, yielded him an income of over £3600. The admiration of the town was divided between him and Reynolds. "There are two factions in art," said Lord Thurlow, "and I am of the Romney faction,"—and the remark, and the rivalry which it implied, caused much annoyance to Sir Joshua, who was accustomed to refer contemptuously to the younger painter as "the man in Cavendish Square." After his return from Italy Romney formed two friendships which powerfully influenced his life. He became acquainted with Hayley, his future biographer, then in the zenith of his little-merited popularity as a poet. His influence on the painter seems to have been far from salutary. Weak himself, he flattered the weaknesses of Romney, encouraged his excessive and morbid sensibility, disturbed him with amateurish fancies and suggestions, and tempted him to expend on slight rapid sketches, and ill-considered, seldom-completed paintings of ideal and poetical subjects, talents which would have found fitter exercise in the steady pursuit of portraiture. About 1783 Romney was introduced to Emma Hart, afterwards celebrated as *Lady Hamilton*, and she became the model from whom he worked incessantly. Her bewitching face smiles from innumerable canvases; he painted her as a *Magdalene* and as a *Joan of Arc*, as a *Circé*, a *Bacchante*, a *Cassandra*, and he has himself confessed that she was the inspirer of what was most beautiful in his art. But

her fascinations seem to have been too much for the more than middle-aged painter, and they had their own share in aggravating that nervous restlessness and instability, inherent in his nature, which finally ruined both health and mind.

In 1786 Alderman Boydell started his great scheme of the Shakespeare Gallery,—it would appear at the suggestion of Romney. The painter at least entered heartily into the plan, and contributed his scene from the *Tempest*, and his Infant Shakespeare attended by the Passions, the latter characterized by the Redgraves as one of the best of his subject pictures. Gradually he began to withdraw from portrait-painting, to limit the hours devoted to sitters, and to turn his thoughts to mighty schemes of the ideal subjects which he would execute. Already, in 1792, he had painted Milton and his Daughters, which was followed by Newton making Experiments with the Prism. He was to paint the Seven Ages, Visions of Adam with the Angel, "six other subjects from Milton—three where Satan is the hero, and three from Adam and Eve,—perhaps six of each." Having planned and erected a large studio in Hampstead, he removed thither in 1797, with the fine collection of casts from the antique which his friend Flaxman had gathered for him in Italy. But his health was now irremediably shattered, and the man was near his end. In the summer of 1799, suffering from great weakness of body and the profoundest depression of mind, he returned to the north, to Kendal, where his deserted but faithful and long-suffering wife received and tended him. He died November 15, 1802.

The art of Romney, and especially his figure subjects, suffered greatly from the waywardness and instability of the painter's disposition, from his want of fixed purpose and sustained energy. He lacked the steadfast perseverance needful to the accomplishment of a great picture. His imagination was no "constant angel ever by his side"; it flashed and flickered fitfully upon him, like April sunshine. His fancy would be captivated by a subject, which was presently embodied in a sketch, but the toil of elaborating it into the finished completeness of a painting too frequently overtaxed his powers; he became embarrassed by technical difficulties which, through defective early training, he was unable to surmount, and the half-covered canvas would be turned to the wall. It is in the best of his portraits that we feel the painter's true greatness. These, and especially his female portraits, are full of grace, distinction, and sweetness. When we examine his heads of Cowper and Wilkes, his delicate and dignified full length of William Beckford, his Parson's Daughter in the National Gallery, and his group of the Duchess of Gordon and her Son, we are ready to admit his claim to rank as the third of the great portrait painters of 18th-century England.

See the *Memoirs* by William Hayley, 1809, and the artist's son, the Rev. John Romney, 1830; also Cunningham's *Lives of the Painters*.

ROMNY, a district town of Russia, on the Sula river, 112 miles to the north-west of Poltava, and in the government of that name. It acquired commercial importance during last century, especially on account of its fairs. The chief of these—that in wool—was removed to Poltava in 1852, but the prices established by the remaining three still determine to a great extent those at the greater fair of Poltava. Of the local industries, the manufacture of agricultural implements is the only one worthy of mention, but the petty trades, both in town and district, are of considerable importance. The population in 1881 was 12,300.

ROMULUS, the mythical eponym founder and first king of Rome, is represented in legend as the son of Mars. His mother, the Vestal Silvia or Ilia, was daughter of Numitor, who had been dispossessed of the throne of Alba by his younger brother Amulius; Silvia's twin sons, Romulus and Remus, were placed in a trough and cast into the Tiber by their cruel granduncle. The trough grounded in the marshes where Rome afterwards stood, under the wild fig-tree (*figus ruminalis*) which was still holy in later days. The babes were suckled by a she-wolf and fed by a woodpecker, and then fostered by Acca Laurentia, wife of the shepherd Faustulus. Growing up they became leaders of a warlike band of shepherds on the Palatine, and in course of time were recognized by their grandfather, whom they restored to his throne, slaying the usurper Amulius. They now proposed to found a city on the site where they had been nurtured; but a quarrel broke out between the brothers, and Remus was slain. The story goes on to tell how Romulus strengthened his band by receiving outlaws, found wives

for them by capture, and waged war with the indignant parents. The most formidable foe was Titus Tatius, king of the Sabines, but after an obstinate struggle he and Romulus united their forces and reigned side by side till Tatius fell in a blood feud with Laurentum. Romulus now reigned alone till he suddenly one day disappeared from earth in darkness and storm, and was thereafter worshipped as a god under the name of Quirinus, which, however, is really a Sabine form of Mars. This legend, best preserved in Livy (book i.), belongs throughout to mythology, not to history. See also Plutarch's *Romulus*, and Dionysius, books i., ii.

ROMULUS AUGUSTULUS. See ODOACER, vol. xvii. p. 726, and ROME, *supra*, p. 781.

RONDA, a town of Spain, in the province of Malaga, and about 43 miles to the west of that city. It occupies a site of singular picturesqueness on a high rock nearly surrounded by the Guadalvin (afterwards the Guadiaro), which flows through a deep and abrupt chasm (or "Tajo") by which the old town is separated from the new. Of the two bridges the more modern (1761) spans the stream in a single arch at a height of about 255 feet. On the edge of the Tajo is the alameda or public promenade, commanding a wide and beautiful prospect of the fertile valley or vega and the sierra beyond. The old part of the town has a Moorish aspect, with narrow, steep, and crooked lanes, and still retains some Moorish towers and other buildings. The Ronda bull-ring is one of the finest in Spain, and can accommodate 10,000 spectators. Ronda is the seat of a considerable trade in leather, saddlery, and horses, and has an important fair (May 20). The population within the limits of the municipality was 19,181 in 1877.

Some inconsiderable remains of an aqueduct and theatre, about 7 miles to the north of Ronda, are supposed to represent the *Actinipo* or *Arunda* of ancient geographers. Ronda was taken from the Moors in 1485. It was the birthplace of Espinel.

RONDEAU or RONDEL (Ital. *Rondo*). In poetry the rondeau is a short metrical structure which in its perfect form is divided into three strophes of unequal length, knit together by rapidly recurrent rhymes and a refrain. The laws of the rondeau have varied at different periods, and even with different poets of the same period—varied so fundamentally that some critics have found a generic difference between the "rondeau" and the "rondel" or "rondet." *Rondeau*, however, seems to be merely the modern spelling of the word *rondel*, as *marteau* is the modern spelling of *martel*, *château* of *châtel*, &c. When the rondeau was called the rondel it was mostly written in fourteen octosyllabic lines of two rhymes as in the rondels of Charles d'Orleans. In this variability of structure it contrasts with the stability of the SONNET (*q.v.*). While the proper sonnet of octave and sestet has always been a structure of fourteen verses (whatever may be the arrangement of the rhymes), the structure under consideration, whether called *rondeau* or *rondel* or *rondet*, may, it seems, consist of any number of verses from eight to thirteen. But when we find that the kind of triolet used by Froissart is a "rondel" we are compelled to admit that the names given to this form are very elastic. In Clement Marot's time, however, the laws of the rondeau became more settled, and, according to Voiture, in the 17th century the approved form of the rondeau was a structure of thirteen verses and a refrain.

Ma foy, c'est fait de moy, car Isabeau
M'a conjuré de luy faire un Rondeau :
Cela me met en une peine extrême.
Quoy treize vers, huit en eau, cinq en ème,
Je luy ferois aussi-tôt un bateau !
En voilà cinq pourtant en un monceau :
Faisons en huit, en invoquant Brodeau,
En puis mettons, par quelque stratagème,
Ma foy, c'est fait !

Si je pouvois encore de mon cerveau
Tirer cinq vers, l'ouvrage seroit beau ;
Mais cependant, je suis dedans l'onzième,
Et si je croy que je fais le douzième
En voilà treize ajustez au niveau.
Ma foy, c'est fait !

All forms of the rondeau, or rondel, however, are alike in this that the distinguishing metrical emphasis is achieved by a peculiar use of the refrain. Though we have the English rondels of Occleve and a set of rondeaus in the *Rolliad* (written by Dr Lawrence the friend of Burke, according to Mr Gosse, who has given us an admirable essay upon exotic forms of verse), it was not till our own day that the form had any real vogue in England. Considerable attention, however, has lately been given in England to the form. Some of the rondeaus of our own contemporary poets are as bright and graceful as Voiture's own. Mr Swinburne, who in his *Century of Roundels* was perhaps the first to make the refrain rhyme with the second verse of the first strophe, has brought the form into high poetry.

Although the origin of the refrain in all poetry was no doubt the improvisatore's need of a rest, a time in which to focus his forces and recover breath for future flights, the refrain has a distinct metrical value of its own ; it knits the structure together, and so intensifies the emotional energy, as we see in the Border ballads, in the *Oriana* of Lord Tennyson, and in the *Sister Helen* of Rossetti. The suggestion of extreme artificiality—of "difficulty overcome"—which is one great fault of the rondeau as a vehicle for deep emotion, does not therefore spring from the use of the refrain, but from the too frequent recurrence of the rhymes in the strophes—for which there is no metrical necessity as in the case of the Petrarchan sonnet. "Difficulty overcome," though a legitimate source of pleasure in French poetry even of the most serious kind (for the French language is essentially the most unpoetic in Europe), finds no place in the serious poetry of England.

In music the "rondo" seeks much the same effect as in poetry, the melodic emphasis of the refrain. The Italian composer Buononcini seems to have been the inventor of the rondo as thus understood.

RONSARD, PIERRE DE (1524–1585), "Prince of Poets" (as his own generation in France called him, and as after much change of criticism there is reason for calling him still in reference to that generation and country), was born at the Château de la Poissonnière, near the village of Couture in the province of Vendômois (department of Loir-et-Cher) on September 11, 1524. His family are said to have come from the Slav provinces to the south of the Danube (provinces with which the crusades had given France much intercourse) in the first half of the 14th century. Baudouin de Ronsard or Rossart was the founder of the French branch of the house, and made his mark in the early stages of the Hundred Years' War. The poet's father was named Loys, and his mother was Jeanne de Chaudrier, of a family not only noble in itself but well connected. Pierre was the youngest son. Loys de Ronsard was *maître d'hôtel du roi* to Francis I., whose captivity after Pavia had just been softened by treaty, and he had to quit his home shortly after Pierre's birth. The future Prince of Poets was educated at home for some years and sent to the Collège de Navarre at Paris when he was nine years old. It is said that the rough life of a mediæval school did not suit him. He had, however, no long experience of it, being quickly appointed page to the duke of Orleans. When Madeleine of France was married to James V. of Scotland Ronsard was attached to the king's service, and he spent three years in Great Britain. The latter part of this time seems to have been passed in England, though he had, strictly speaking, no business there. On returning to France in 1540 he was

again taken into the service of the duke of Orleans. In this service he had other opportunities of travel, being sent to Flanders and again to Scotland. After a time a more important employment fell to his lot, and he was attached as secretary to the suite of Lazare de Baif, the father of his future colleague in the *Pléiade* and his companion on this occasion, Antoine de Baif, at the diet of Spire. Afterwards he was attached in the same way to the suite of the Cardinal du Bellay-Langey, and his mythical quarrel with Rabelais dates mythically from this period. His apparently promising diplomatic career was, however, cut short by an attack of deafness which no physician could cure, and he determined to devote himself to study. The institution which he chose for the purpose among the numerous schools and colleges of Paris was the Collège Coqueret, the principal of which was Daurat—afterwards the "dark star" (as he has been called from his silence in France) of the *Pléiade*. Baif accompanied Ronsard ; Belleau shortly followed ; Joachim du Bellay, the second of the seven, joined not much later. Muretus, a great scholar and by means of his Latin plays a great influence in the creation of French tragedy, was also a student here.

Ronsard's period of study occupied seven years, and the first manifesto of the new literary movement, which was to apply to the vernacular the principles of criticism and scholarship learnt from the classics, came not from him but from Du Bellay. The *Défense et Illustration de la Langue Française* of the latter appeared in 1549, and the *Pléiade* may be said to have been then launched. It consisted, as its name implies, of seven writers whose names are sometimes differently enumerated, though the orthodox canon is beyond doubt composed of Ronsard, Du Bellay, Baif, Belleau, Pontus de Tyard (a man of rank and position who had exemplified the principles of the friends earlier), Jodelle the dramatist, and Daurat. Ronsard's own work came a little later, and a rather idle story is told of a trick of Du Bellay's which at last determined him to publish. Some single and minor pieces, an epithalamium on Antoine de Bourbon and Jeanne de Navarre, a "Hymne de la France," an "Ode à la Paix," preceded the publication in 1550 of the four first books ("first" is characteristic and noteworthy) of the *Odes* of Pierre de Ronsard. This was followed in 1552 by the publication of his *Amours* with the fifth book of *Odes*. These books excited a violent literary quarrel. Marot was dead, but he left a numerous school, some of whom saw in the stricter literary critique of the *Pléiade*, in its outspoken contempt of merely vernacular and mediæval forms and so forth, an insult to the author of the *Adolescence Clémentine* and his followers. The French court, and indeed all French society, was just then much interested in literary questions, and a curious story is told of the rivalry that ensued. Mellin de St Gelais, it is said, the chief of the "École Marotique" and a poet of no small merit, took up Ronsard's book and read part of it in a more or less designedly burlesque fashion before the king. It may be observed that if he did so it was a distinctly rash and uncourtier-like act, inasmuch as from Ronsard's father's position in the royal household the poet was personally known and liked both by Henry and by his family. At any rate Marguerite the king's sister, who afterwards became duchess of Savoy, is said to have snatched the book from St Gelais and insisted on reading it herself, with the result of general applause. Henceforward, if not before, his acceptance as a poet was not doubtful, and indeed the tradition of his having to fight his way against cabals is almost entirely unsupported. It is quite true that he more than any other poet has had to suffer detraction from a remarkably different series of opposing forces. But none of these interfered with his popularity in his own time, which was overwhelming and immediate, or with his prosperity, which was unbroken. He published his *Hymns*, dedicated to Marguerite de Savoie, in 1555, the conclusion of the *Amours* in 1556, and then a collection of *Œuvres Complètes* said to be due to the invitation of Mary Stuart, queen of Francis II., in 1560.

The rapid change of sovereigns did Ronsard no harm. Charles IX., who succeeded his brother after a very short time, was even better inclined to him than Henry and Francis. He gave him rooms in the palace ; he bestowed upon him divers abbacies and priories ; and he called him and regarded him constantly as his master in poetry. Neither was Charles IX. a bad poet. This royal patronage, however, had its disagreeable side. It excited violent dislike to Ronsard on the part of the Huguenots, who wrote constant pasquinades against him, strove (by a ridiculous exaggeration of the Dionysiac festival at Arcueil, in which the friends had indulged to celebrate the success of the first French tragedy, Jodelle's *Cleopâtre*) to represent him as a libertine and an atheist,

and (which seems to have annoyed him more than anything else) set up his follower Du Bartas as his rival. According to some words of his own which are quite credible considering the ways of the time, they were not contented with this variety of argument, but attempted to have him assassinated. During this period Ronsard's work was considerable but mostly occasional, and the one work of magnitude upon which Charles put him, the *Franciade*, has never been ranked, even by his most devoted admirers, as a chief title to fame. The metre (the decasyllable) which the king chose could not but contrast unfavourably with the magnificent alexandrines which Du Bartas and Agrippa d'Aubigné were shortly to produce; the general plan is feebly classical, and the very language has little or nothing of that racy mixture of scholarliness and love of natural beauty which distinguishes the best work of the *Pléiade*. The poem could never have had an abiding success, but at its appearance it had the singular bad luck almost to coincide with the massacre of St Bartholomew, which had occurred about a fortnight before its publication. One party in the state were certain to look coldly on the work of a minion of the court at such a juncture, the other had something else to think of. The death of Charles made, indeed, little difference in the court favour which Ronsard enjoyed, but, combined with his increasing infirmities, it seems to have determined him to quit court life. During his last year he lived chiefly at a house which he possessed in Vendôme, the capital of his native province, at his abbey at Croix Val in the same neighbourhood, or else at Paris, where he was usually the guest of Jean Galland, well known as a scholar, at the Collège de Boncourt. It seems also that he had a town house of his own in the Faubourg Saint Marcel. At any rate his preferences made him in perfectly easy circumstances, and he seems neither to have derived nor wished for any profit from his books. A half-jocular suggestion that his publisher should give him money to buy "du bois pour se chauffer" in return for his last revision of his *Œuvres Complètes* is the only trace of any desire of the kind. On the other hand he received not merely gifts and endowments from his own sovereign but presents from many others, including Elizabeth of England. His last years were, however, saddened not merely by the death of many of his most intimate friends, but by constant and increasing ill health. This did not interfere with his literary work in point of quality, for he was rarely idle, and some of his latest work is among his best. But he indulged (what few poets have wisely indulged) the temptation of constantly altering his work, and many of his later alterations are by no means for the better. Towards the end of 1585 his condition of health grew worse and worse, and he seems to have moved restlessly from one of his houses to another for some months. When the end came, which, though in great pain, he met in a resolute and religious manner, he was at his priory of Saint Cosme at Tours, and he was buried in the church of that name on Friday, December 27.

The character and fortunes of Ronsard's works are among the most remarkable in literary history, and supply in themselves a kind of illustration of the progress of French literature during the last three centuries. It was his fortune to be almost always extravagantly admired or violently attacked, and it is only recently that he has been set in his proper place. At first, as has been said, the enmity, not altogether unprovoked, of the friends and followers of Marot fell to his lot, then the still fiercer antagonism of the Huguenot faction, who, happening to possess a poet of great merit in Du Bartas, were able to attack Ronsard in his tenderest point, that of his reputation as the greatest living French poet. But fate had by no means done its worst with him in his lifetime. After his death the classical reaction set in under the auspices of Malherbe, a man of correct and narrow spirit who seems to have been animated with a sort of personal hatred of Ronsard, though it is not clear that they ever met. After Malherbe (who by no means himself produced the effect which some well-known but quite unhistorical lines of Boileau would convey) the rising glory of Corneille and his contemporaries obscured the tentative and equal work of the *Pléiade*, which was, moreover, directly attacked by Boileau himself, the dictator of French criticism in the last half of the 17th century. Then Ronsard was, except by a few men of taste, like La Bruyère and Fénelon, forgotten when he was not sneered at. In this condition he remained during the whole 18th century and the first quarter of the 19th. The romantic revival, seeing in him a victim of its special *bête noire* Boileau, and attracted by his splendid diction, rich metrical faculty, and combination of classical and mediæval peculiarities, adopted his name as a kind of battle cry, and for the moment exaggerated his merits somewhat. The critical work, however, first of Sainte-Beuve in his *Tableau de la Littérature Française au 16ème Siècle*, and since of others, has established Ronsard pretty securely in his right place, a place which may be defined in a few sentences.

For the general position of the *Pléiade* reference may be made to the article on the literature of FRANCE (vol. ix. p. 650). Ronsard, its acknowledged chief and its most voluminous poet, was probably also its best, though a few isolated pieces of Belleau excel him in

airy lightness of touch. Several sonnets of Du Bellay exhibit what may be called the intense and voluptuous melancholy of the Renaissance more perfectly than anything of his, and the finest passages of the *Tragiques* and the *Divine Sepmaine* surpass his work in command of the alexandrine and in power of turning it to the purposes of satirical invective and descriptive narration. But that work is, as has been said, very extensive (we possess at a rough guess not much short of a hundred thousand lines of his), and it is extraordinarily varied in form. He did not introduce the sonnet into France, but he practised it very soon after its introduction and with admirable skill—the famous "Quand vous serez bien vieille" being one of the acknowledged gems of French literature. His odes, which are very numerous, are also very interesting and in their best shape very perfect compositions. He began by imitating the strophic arrangement of the ancients, but very soon had the wisdom to desert this for a kind of adjustment of the Horatian ode to rhyme, instead of exact quantitative metre. In this latter kind he devised some exquisitely melodious rhythms of which, till our own day, the secret died with the 17th century. His more sustained work sometimes displays a bad selection of metre; and his occasional poetry—epistles, eclogues, elegies, &c.—is injured by its vast volume. But the preface to the *Franciade* is a very fine piece of verse, far superior (it is in alexandrines) to the poem itself. Generally speaking, Ronsard is best in his amatory verse (the long series of sonnets and odes to Cassandre, Marie, Genève, Hélène, &c.), and in his descriptions of the country (the famous "Mignonne allons voir si la rose," the "Fontaine Belleric," the "Forêt de Gastine," and so forth), which have an extraordinary grace and freshness. No one used with more art than he the graceful diminutives which his school set in fashion. He knew well too how to manage the gorgeous adjectives ("marbrine," "cinabrine," "ivoirine," and the like) which were another fancy of the *Pléiade*, and in his hands they rarely become stiff or cumbrous. In short, Ronsard shows eminently the two great attractions of French 17th-century poetry as compared with that of the two following ages,—magnificence of language and imagery and graceful variety of metre.

The chief separately published works of Ronsard are noted above. He produced, however, during his life a vast number of separate publications, some of them mere pamphlets or broadsheets which from time to time he collected, often striking out others at the same time, in the successive editions of his works. Of these he himself published seven—the first in 1560, the last in 1584. Between his death and the year 1630 ten more complete editions were published, the most famous of which is the folio of 1609. A copy of this presented by Sainte-Beuve to Victor Hugo, and now in the possession of M. Maxime du Camp, has a place of its own in French literary history. From 1630 Ronsard was not again reprinted for more than two centuries. Just before the close of the second, however, Sainte-Beuve printed a selection of his poems at the end of the above-mentioned *Tableau*. There are also selections by M. Noël (in the *Collection Didot*) and Beq de Fouquières. In 1857 M. Prosper Blanchemain, who had previously published a volume of *Œuvres Inédites de Ronsard*, undertook a complete edition for the *Bibliothèque Elzévirienne*. The eighth and last volume of this appeared ten years later. It is practically complete; a few pieces of a somewhat free character which are ascribed with some certainty to the poet are, however, excluded. The chief separate volume of criticism on Ronsard is that of M. Gandar (Metz, 1854), which considers him chiefly in his relation to the ancients. (G. SA.)

RONSDORF, a town in north-western Prussia, on the Morsbach, a small affluent of the Rhine, 18 miles west of Düsseldorf, contains considerable iron and brass works, foundries, and wire-works, besides carrying on extensive manufactures of ribbons, trimmings, and similar goods. The population in 1880 was 10,100.

Founded in 1737 by the followers of Elias Eller, a religious enthusiast, Ronsdorf received town-rights in 1745. The Ronsdorf sect, the members of which called themselves Zionites, is now extinct.

ROOF. See BUILDING and DOME.

ROOK (Anglo-Saxon *Hrōc*, Icelandic *Hrókr*,¹ Swedish *Råka*, Dutch *Roek*, Gaelic *Rocas*), the *Corvus frugilegus* of ornithology, and throughout a great part of Europe the commonest and best-known of the Crow-tribe. Besides its pre-eminently gregarious habits, which did not escape the notice of Virgil (*Georg.* i. 382)² and are so unlike those of nearly every other member of the *Corvidæ*, the Rook is at once distinguishable from the rest by commonly losing at an early age the feathers from its face, leaving a bare, scabrous, and greyish-white skin that is sufficiently visible at some distance. In the comparatively rare cases

¹ The bird, however, does not inhabit Iceland, and the language to which the name belongs would perhaps be more correctly termed Old Teutonic. From this word is said to come the French *Frenx*. There are many local German names of the same origin, such as *Rooke*, *Rouch*, *Ruch*, and others, but the bird is generally known in Germany as the *Saat-Krähe*, i. e., Seed- (= Corn-) Crow.

² This is the more noteworthy as the district in which he was born and educated is almost the only part of Italy in which the Rook breeds. Shelley also very truly speaks of the "legioned Rooks" to which he stood listening "mid the mountains Euganean."

in which these feathers persist, the Rook may be readily known from the black form of CROW (vol. vi. p. 618) by the rich purple gloss of its black plumage, especially on the head and neck, the feathers of which are soft and not pointed. In a general way the appearance and manners of the Rook are so well known, to most inhabitants of the British Islands especially, that it is needless here to dwell upon them, and particularly its habit of forming communities in the breeding-season, which it possesses in a measure beyond that of any other land bird of the northern hemisphere. Yet each of these communities, or rookeries, seems to have some custom intrinsically its own, the details of which want of space forbids any attempt to set before the reader. In a general way the least-known part of the Rook's mode of life are facts relating to its migration and geographical distribution. Though the great majority of Rooks in Britain are sedentary or only change their abode to a very limited extent, it is now certain that a very considerable number visit this country in or towards autumn, not necessarily to abide here, but merely to pass onward, like most other kinds of birds, to winter further southwards; and, at the same season or even a little earlier, it cannot be doubted that a large proportion of the young of the year emigrate in the same direction. As a species the Rook on the European continent only resides during the whole year throughout the middle tract of its ordinary range. Further to the northward, as in Sweden and northern Russia, it is a regular summer-immigrant, while further to the southward, as in southern France, Spain, and most parts of Italy, it is, on the contrary, a regular winter-immigrant. The same is found to be the case in Asia, where it extends eastward as far as the upper Irtysh and the Ob. It breeds throughout Turkestan, in the cold weather visiting Afghanistan, Cashmere, and the Punjab, and Sir Oliver St John found a rookery of considerable size at Casbin in Persia. In Palestine and in Lower Egypt it is only a winter-visitant, and Canon Tristram noticed that it congregates in great numbers about the mosque of Omar in Jerusalem.¹

There are several moot points in the natural history of the Rook which it is impossible here to do more than mention. One is the cause of the curious shedding on reaching maturity of the feathers of its face, and another the burning question whether Rooks are on the whole beneficial or detrimental to agriculture. In England the former opinion seems to be generally entertained, but in Scotland the latter has long been popular. The absence of sufficient observations made by persons at once competent and without bias compels the naturalist to withhold his judgment on the matter, but the absence of such observations is eminently discreditable to the numerous Agricultural Societies of the United Kingdom. (A. N.)

ROOKE, SIR GEORGE (1650–1709), naval commander, was born near Canterbury in 1650. Entering the navy as a volunteer, he became post-captain in 1680, and vice-admiral in 1692. In May of this year he greatly distinguished himself in a night attack on the French fleet off Cape La Hogue, when he succeeded in burning six of their ships. Shortly afterwards he received the honour of knighthood and a reward of £1000. In 1702 he commanded the expedition against Cadiz, and on the passage home captured the Plate fleet off Vigo. Along with Sir Cloudesley Shovel he took part in the capture of Gibraltar, 21st July 1704. On 13th August of the same year he attacked the French fleet off Malaga, the battle being drawn. On account of the dissatisfaction expressed indirectly at the result of the contest, he retired from the service in February 1705. He died 24th January 1709.

See *The Life and Glorious Actions of Sir George Rooke*, 1707.

¹ It is right to mention that the Canon considers the Rook of Palestine entitled to specific distinction as *Corvus agricola* (*Proc. Zool. Society*, 1864, p. 444; *Ibid.*, 1866, pp. 68, 69). In like manner the Rook of China has been described as forming a distinct species, under the name of *C. pastinator* (*Proc. Zool. Society*, 1845, p. 1), from having the feathers of its face only partially deciduous.

ROPE. All varieties of cordage having a circumference of an inch or more are known by the general name of rope. Twisted cordages of smaller dimensions are called cords, twines, and lines, and when the dimensions are still smaller the article becomes thread or doubled yarn. All these varieties of cordage are composed of at least two, and in most cases of very many separate yarns, which are textile fibres drawn out and twisted into a uniform compact line. From thread and fine twine upwards the whole art of manufacture is simply that of twisting together fibres and yarns, but the comparative heaviness and coarseness of the materials operated on in rope-making render necessary the adoption of strong machinery and modified processes which clearly define this manufacture as a distinct calling. The modern trade of rope-making is again divided into two branches dealing respectively with certain vegetable fibres and with metallic wire. Silk cords and hair lines and ropes do not come within the scope of rope-making proper.

Vegetable fibres fit for rope-making are numerous, but ordinarily not many are employed. Speaking generally, for the prime requisites of strength, suppleness, flexibility, and durability, none can compete with the common HEMP (*q.v.*), which consequently is the staple of the rope-maker. MANILA HEMP (*q.v.*) is a fibre of the most remarkable tenacity, of unapproached value for heavy cordage, but too stiff and woody for small cords and twines. After these in utility come sisal hemp of Central America (*Agave sisalana*), phormium hemp of New Zealand (*Phormium tenax*, see vol. xviii. p. 812), and the sunn hemp of the East Indies (*Crotalaria juncea*, see vol. xi. p. 647)—all fibres of great strength, and largely used by rope-makers. Among fibres more rarely seen in rope-works are Jubbulpore hemp (*Crotalaria tenuifolia*), bowstring hemp (*Sansevieria zeylanica*), and other "hemps" of the East Indies, and plantain fibre (*Musa paradisiaca*) and agave fibre (*Agave americana*) of America. Ropes and twine of cotton are extensively made, especially for driving-bands for machinery. JUTE (*q.v.*) is now in considerable use by rope-makers, on account of its cheapness, but it is very deficient in strength and durability. COIR (see vol. vi. p. 917) is also largely employed, and many other fibres are used, principally in the localities of their production.

A rope is composed of a certain number of "strands," the strand being itself made up of many "yarns." Three strands laid or twisted together form a "hawser-laid" rope, and three such hawsers similarly laid make a "cable-laid rope" or "cable." A "shroud-laid" rope consists of four strands laid around a central strand or core. The prepared fibre is twisted or spun to the right hand to form yarn; the required number of yarns receive a left hand twist to make a strand; three strands twisted to the right make a hawser; and three hawsers twisted to the left yield a cable. Thus the twist in each successive operation is in a different direction from the preceding, and this alternation of direction serves to some extent to preserve the parallelism of the fibres.

The primary object of twisting fibres together in a rope is that by mutual friction they may be held together when a strain is applied to the whole. Hard twisting has the further advantage of compacting the fibres and preventing the penetration of moisture when the ropes are exposed to water. The proper degree of twist is a matter of considerable importance, as all twisting injuriously affects the strength of the individual fibres, and indeed it is possible to twist a cord so hard that it will break under the action. The degree of twist given to ropes is generally such that the rope is from three-fourths to two-thirds the length of the yarn composing it, and the lighter the twist the greater in proportion is

the strength of the rope. In a bundle of fibres, equal in length and strength, fastened at the ends, each fibre will, upon a strain being applied to the bundle, bear its proper share of the stress; and the strength of the bundle will evidently be measured by adding together the strength of the separate fibres. But if this bundle is twisted so as to form a thread, the strain will no longer be equally distributed among the fibres, for, by the torsion, the external fibres of the bundle will be wound round those that lie nearest to the centre, and, in proportion to their distance from the heart of the bundle and the amount of twist given, will form spirals more or less inclined from the axis of the thread. The external fibres will in consequence be longer than the internal ones, and the greatest share of the strain will be borne by the latter. The depreciation in strength from twisting of hard woody fibres is greater than is the case with fine soft flexible fibres, such as common hemp of good quality.

To prevent the decay of ropes which are frequently exposed to water, the yarns of which they are composed are soaked in hot Archangel tar before they are formed into strands. Tarring, it is found, also seriously diminishes the strength of the rope, but no other means of preventing water from penetrating and rotting the fibre has yet been found. M. Duhamel, from a series of investigations made in 1741-46, came to the conclusion that, apart from exposure to wet, untarred cordage in constant service was about one-third more durable than tarred, that it retained its strength for a longer period when kept in store, and that it resisted the ordinary influences of the weather better than when it was tarred. Subsequent experience has fully borne out these conclusions, and now that Manila hemp, which withstands the influence of water well, is so extensively used for heavy cordage, tarring is no longer so generally practised in rope-making as was at one time the case.

Ropewalk Spinning.—The sequence of operations in this ancient but still greatly used method of working is—(1) heckling the fibre; (2) spinning the yarn; (3) tarring the yarn (when necessary); (4) forming the strands; (5) laying the strands into ropes.

Heckling differs in no way from the hand-heckling process used in the preparation of flax (see vol. xiv. p. 604-5). The heckle-board consists of a wooden plank, studded with strong tapered and sharp-pointed steel prongs. A series of such heckle-boards is used in the progressive heckling operation, the prongs diminishing in size and being closely set together. In drawing his "stricks" of fibre through these gradually diminishing heckles the workman not only combs out and disentangles the material, separating "tow" from "line," but he also splits up and makes finer the fibres upon which he operates. A little oil is sprinkled on the heckles in course of the process. The spinning is done in a covered and enclosed walk from 300 to 400 yards in length, at both ends of which the machines are placed. These (one variety of which is shown in fig. 1) consist of a series of "whirls" *a, a*, generally twelve in number, set in a semicircular frame *c*. The whirls are set in rapid rotation by a belt which passes over them from a wheel *bb*; or, what is now more usual, they are driven by the direct friction of the wheel itself pressed hard against them. The point of the prolonged axis of the whirl is bent into a hook, on which the ends of the fibre are hung for spinning. Each spinner carries around his waist a quantity of heckled fibre, and, fastening an end on the whirl hook, he walks backward down the walk giving out even proportions of fibre all the while and regulating his pace so that the amount of twist communicated to the yarn is uniform. He draws the fibre from his waist with the left hand and lets it slip between the thumb and finger of the right, which, protected by a piece of woollen cloth, compresses and moulds into

Fig. 1.

cylindrical form the yarn as it is spun. At intervals in the length of the walk there are posts and rails supplied with hooks into which the spinner throws the yarn to keep it off the ground. The spinners commonly work from both ends in sets of six, and as each set arrives at the end of the walk the yarns spun by them are unhooked from the whirls, tied together at the ends, and collected in large hooks along the side of the walk till a haul of about four hundred yarns is accumulated. When tarred rope is to be made the haul of yarn is at this stage passed through a kettle of tar heated to about 212° Fahr., from which it is drawn through a nipping apparatus which squeezes out superfluous tar, leaving the yarn a bright brown colour soaked with about one-fourth its weight of tar.

For "forming" strands the spun yarn is wound, each yarn separately, on bobbins and placed in a bobbin frame. From their bobbins the yarns are conducted through a concentric circle of holes in a steel register plate, behind which they come together and are pressed through a trumpet-mouthed tube, which varies in diameter according to the diameter of the strand being formed; and they are attached to the hooks of the forming machine or traveller. This machine travels down the ropewalk on rails moved by an endless rope passing over a grooved pulley, the hooks being at the same time set in rotation by gearing connected with the pulley. When the machine has reached the end of the walk and sufficient "twist" is given to the three strands, they are unhooked and hung together on the centre hook of the machine. A grooved conical block of wood called a "top" is inserted between the strands, one of which lies in each of the three equidistant concentric grooves. The strands at the fore-end are cut away and attached separately to three other hooks. The laying of the three strands into a hawser is now proceeded with by giving a reverse rotation to the central hook on which at the lower end they are hung. As twist is communicated to the strand between the top and the machine, the former is forced away towards the fore-end, and on the uniform motion outwards of the top depends the even and regular character of the lay. While the hook at the lower end is rotating in one direction to lay the strands, the three hooks holding the strands at the upper end are correspondingly revolved in the opposite direction to keep up the amount of twist in them which they would otherwise lose by the unwinding effect of the revolution of the laying hook. As the laying proceeds, the forming machine is gradually dragged up the rails owing to the shortening of the strands caused by twisting them into a hawser. The formation of a cable from three hawsers is effected in a similar manner; but the great weight of material dealt with necessitates some modified operations to ensure uniformity of laying. In many rope-works distinct machinery is used for the strand laying and rope-forming operations.

Machine or Factory Rope-Making.—The ropewalk system of manufacture has several inconveniences, among which, in towns, the most serious is the difficulty and expense of obtaining the long narrow strips of ground it requires. Hand-made ropes are also subject to certain irregularities of twist, and the yarns are less uniform than can be obtained from the operations of automatic machinery. Moreover in machine-spinning it is possible so to form the strands and lay the finished rope that any strain can be more equally distributed over all the fibres than can be done with hand-spinning and twisting. The essential feature of the factory system consists in having yarns, strands, and ropes wound upon bobbins or drums in each successive stage, the material being drawn direct from the reel to be twisted and immediately wound up again. The length of rope made is only limited by the carrying capacity of the drum on which it is finally wound.

The earliest practical attempt to introduce machine rope-spinning was made by Cartwright, the famous inventor of the power loom, who, in 1792, obtained a patent for a machine called by him a "Cordelier." Cartwright's cordelier, as improved in 1805 by Captain Huddart, became the basis of modern laying and forming machines. Numerous modifications and improved combinations have been introduced, but the principle on which they are worked is essentially the same. A complete set of rope and twine making machinery includes heckling machines, spreading and drawing frames for line yarns, and carding engines and drawing frames for tow. These machines do not differ from the ordinary preparing machinery in flax manufactures, nor is there any essential difference in the spinning frames for the smaller counts of yarns. The heavier yarns for rope-making are spun upon a gill-spinning frame, such as Goode's automatic spinner, which is fitted with a self-feeding motion by which when the sliver is presented in large quantity the rate of motion and spinning is proportionally increased, when the sliver becomes attenuated the motion is correspondingly slow, and when the sliver is broken the spinner stops. Thus a yarn well laid and uniform in thickness is secured by automatic machinery. For spinning heckled yarn such as is used in the ropewalk a machine of simple construction, Ronald's patent (fig. 2), is now extensively used. The yarn in this machine has the advantage of being hand-spun, as the spinner draws out, compresses, and feeds the fibre from a supply round his or her waist just as on the rope-

walk. In this way the strength, evenness, and other good qualities of hand-spun yarn are secured.

Fig. 2.

Twine Manufacture.—The making of twines and small cords forms a distinct branch of the rope trade, the whole of the operations being carried out on a series of machines in which a large number of twines and cords are twisted and otherwise prepared simultaneously, while in rope-making the machines deal only in general with the material of one rope at a time. Common twines are twisted from prepared yarns on a twine-twisting frame, the same in principle as the doubling spindle frames of the ordinary textile trade. The bobbins of yarn are placed on pegs in the creel above the twisting spindles, from two to five bobbins being placed over each spindle according to the number of yarns which go to make up the twine. These yarns are passed round a pair of rollers, which pull them off the bobbins and deliver them evenly and with regularity to the flyer of the spindle, by which they are twisted and wound on the bobbin round which they rotate. By a recent improvement the required number of yarns, instead of being drawn from separate bobbins, are first wound together upon one bobbin in a "doubling winding frame." A series of bobbins so filled are placed on spindles in a twisting frame and twisted by inverted flyers; the twisted twine is drawn off by pairs of conical grooved twist rollers round which it passes, and is wound on taking-up bobbins. Cord or cable laid twine—that is, twine twisted first as above and then in strands of three, cabled or twisted in the reverse direction—is prepared on cabling machines. At the back of the machine the yarns receive their first twist as above described, and thence the strands from three spindles are drawn off together over a pair of cone rollers, by which they are laid, and thence they pass to the front of the machine, where there is a range of powerful flyers and spindles by which they are twisted and wound upon a large bobbin. Twines and cords at this stage are rough and bristly in appearance, and for finishing them they undergo a dressing, sizing, and polishing operation in a special polishing machine. From the bobbins they are unwound and passed through a trough of hot water, thence in parallel order over the surface of a set of rubbing rollers covered with strong card cloth revolving at high speed in a contrary direction to that in which the twine is travelling. The friction of the strong card wires shaves and smooths the twine, which then passes through the sizing trough containing a hot paste, usually of potato farina. The superfluous paste is squeezed out by passing the twine between rollers, and it is next passed over rollers covered with rough coir, which presses in all fibres yet protruding from the twine, and finally it is dried by passing round a range of steam-heated cylinders, running parallel with which are coir-covered polishing rollers which smooth the twine while it is being dried. The finished twine is wound into balls of a definite weight on a balling machine.

Rope-Spinning.—The machines required for making ropes from spun yarn consist of a forming flyer for forming the strands and a laying machine for twisting the strands into rope. A cabling machine for uniting three-strand hawsers into a cable is only a second laying machine of larger and heavier dimensions; but it is still a common practice to lay the heavy cable on the ropewalk. The two operations of forming strands and laying rope may be performed on one combined machine, especially in dealing with light ropes composed of a few yarns; but as a rule separate machines are preferred for each operation. In a simple machine designed only for a single twisting operation there must be one fixed and one revolving section. If the section which contains the bobbins of yarn to be twisted is fixed, then the section in which is placed the bobbin for receiving the twisted product must be made to revolve. A machine in which the two operations of forming strands and laying rope are combined is of necessity cumbrous in proportion and complex in gearing. It must embrace three form-

ing flyers, to form simultaneously three strands which in another part of the machine are laid into one rope. The forming flyers revolve in one direction to twist the strands, while they move in the opposite direction as a whole with the revolution of the laying section which gives the finishing twist to the rope, and such complex inter-revolutions within one frame are somewhat unwieldy. Finally, the machines may be made with their axis of revolution either vertical or horizontal. With all these alternatives there is considerable room for modification in the twisting arrangements.

The ordinary form of strand-laying machine is a vertical flyer (fig. 3). It consists of two or more upright frames or creels *a, a*, capable

of holding ranged above each other a certain number of bobbins, from which the yarn may be easily run off and carried upward to be formed into a strand. The creels are fixed above and below in a stout circular plate and framework *bb*, to which motion of rotation is given by gearing *c*, placed on the under side. At the upper end of the revolving framework the yarns from the various bobbins are passed through a register plate *d*, a circular piece of metal pierced with concentric holes corresponding in number with the bobbins which the creels are fitted to hold. Beyond the register plate *d* the yarns come together in the trumpet-shaped mouth of the stranding tube. The stranding tube itself varies in gauge according to the diameter of the strand being made, and in it the yarns are caught, rounded, compressed, twisted, and

Fig. 3.

smoothed, and, passing out, the new-formed strand is drawn over a pulley *e* around "drawing-off" gear *f*, and wound on a large bobbin or drum *g*. The speed at which the drawing-off gear revolves regulates the hardness or softness of twist given to the strand, and its rotation can be varied at pleasure by the use of change wheels.

In fig. 4 is illustrated a different form of stranding machine, of American origin. In this apparatus the bobbin creel is stationary

Fig. 4.

and the yarns are drawn through the register plate and twisted in the stranding tube by the revolution of the entire framework in which are placed the drawing-off gear and the large drum or spool on which the finished strand is wound. The advantages claimed for this apparatus are facility of replacing bobbins as the yarns run out, and increased production owing to the rapid and uninterrupted rotation of the flyer.

In the ordinary laying machine there are only three bobbins of strand to deal with; but, from the fact that it is necessary to give a certain amount of "forehard" or twisting to the strands themselves while they are being twisted together in an opposite direction for laying, the machine is not without complexity. The three bobbins revolve together within a strong iron frame, and that motion forms the strand into a rope. But each bobbin is at the same time revolving in a contrary direction on its own axis at the rate tempered to the amount of forehard it is desired to put on the rope in laying. Moreover, in order to deliver evenly and in equal quantities the heavy and intractable strands from each bobbin to the laying top, it is necessary to have within each bobbin frame a drawing-off motion, and thus we have three dis-

tinuous sets of motions in an ordinary laying machine. Fig. 5, in which only one bobbin frame is shown, will make plain one method of communicating these three motions, which in this case are controlled by a series of three shafts, placed one within the other. The external shaft gives motion to the entire apparatus, and its revolution in one direction forms the rope, which passes away over a pulley. The second shaft controls the spur-wheel *a*, which, geared into the spur-wheel *a'* attached to the bobbin frame, turns it in a direction contrary to the motion of the whole. The internal shaft gears into a spur-wheel *b*, which again is centred on a tubular shaft *c* passing into the bobbin frame, and by a pair of bevel wheels controlling the rate of motion of the "drawing-off" pulley *d*, around which the strand is once wound, and from which it is conveyed by the tubular shaft to a small guide pulley on the upper part of the revolving frame.

An American rope-laying machine is in use, similar in principle to the forming machine fig. 4, from which it differs only in having the strand bobbins mounted in flyers to give the strand the necessary amount of forehand in laying.

Wire Rope.—Ropes made of wire have only come into use in the course of the present century, but now their employment is very extensive, and they play an important part in connexion with traction railways, mines, collieries, hoists, steam ploughing, and many other modern developments of industry. In the year 1822 a suspension bridge of wire was erected at Geneva. The wire used in this case, however, was not twisted, but consisted of parallel bundles bound with wire and other coverings wrapped spirally around them to compact and keep the whole together. A bundle of small wires so treated presents the maximum of strain-resisting power combined with great rigidity, but it is obviously unsuited for most of the uses to which rope is put. Formed wire rope, consisting of strands laid in the manner of ordinary rope, began to be made about 1837; and now wire ropes of many kinds and dimensions are made from charcoal iron wire of fine quality, from mild steel, and from fine crucible steel. Copper wire and brass wire are also used for rope-making.

Wire ropes are stranded and laid or closed in machines which do not differ in essential features from the ordinary rope-making machinery. Both vertical and horizontal forms of revolving machines are used; but, as the rope-closing machine has sometimes to carry as many as nine bobbins of strand, each with about two tons of wire, a vertical machine is best for enormous weights. An ingenious wire-rope machine has been invented by Mr Archibald Smith, in which the bobbins of wire are suspended, and only the framework around them and the wire drawn off are rotated for the forming and laying operations, and thus the necessity for rotating these enormous weights at a high speed is obviated.

The number of wires in a wire-rope strand are few—generally from six to nine, and never more than eighteen. They are lightly twisted in the stranding machine, and they receive no foretwist in the rope-closing apparatus. The strands, on the other hand, which go to form a rope are numerous—from six to nine and upwards; and they are always wound round a core, which is generally of hemp, but sometimes a wire core is used. A wire rope thus forms a series of gentle spirals arranged continuously round a core. A large proportion of the wire is galvanized, to protect it from rusting.

The following table shows the relative circumference, weight, and strength of hemp, charcoal iron wire, and steel wire round ropes:—

Hemp.		Charcoal Iron.		Crucible Steel.		Breaking Strain.	Working Load.
Circumference.	Weight per Fathom.	Circumference.	Weight per Fathom.	Circumference.	Weight per Fathom.

(J. PA.)

RORQUAL. See WHALE.

ROSA, SALVATOR (1615–1673), a renowned painter of the Neapolitan school, was born in Arenella, in the outskirts of Naples, in 1615: the precise day is given as 20th June, and also as 21st July. His father, Vito Antonio de Rosa, a land surveyor, was bent upon making the youth a lawyer, and sent him to study in the convent of the Somaschi fathers. Here Salvator began showing a turn for art: he went in secret to his maternal uncle Paolo Greco to learn the practice of painting, but soon found that Greco had little pictorial lore to impart, so he transferred himself to his own brother-in-law Francesco Fracanzaro, a pupil of Ribera, and afterwards had some practice under Ribera himself. Above all he went to nature, frequenting the Neapolitan coast, and keeping his eyes open and his hand busy. At the age of seventeen he lost his father; the widow was left unprovided for, with at least five children, and Salvator found himself immersed in a sea of troubles and perplexities, with nothing for the while to stem them except a buoyant and adventurous temperament. He obtained some instruction under the battle-painter Aniello Falcone, but chiefly painted in solitude, haunting romantic and desolate spots, beaches, mountains, caverns, verdure-clad recesses. Hence he became in process of time the initiator of romantic landscape, with a special turn for scenes of strange or picturesque aspect—often turbulent and rugged, at times grand, and with suggestions of the sublime. He picked up scanty doles when he could get them, and his early landscapes sold for a few pence to petty dealers. The first person to discover that Rosa's work was not as trumpery as it was cheap was the painter Lanfranco, who bought some of the paintings, and advised the youth to go to Rome. Hither in 1635, at the age of twenty, Rosa betook himself; he studied with enthusiasm, but, catching fever, he returned to Naples and Falcone, and for a while painted nothing but battle-pieces, and these without exciting any attention. This class of work was succeeded by the landscape art peculiarly characteristic of him—wild scenes wildly peopled with shepherds, seamen, or especially soldiers. He then revisited Rome, and was housed by Cardinal Brancaccio; this prelate being made bishop of Viterbo, Rosa painted for the Chiesa della Morte a large and noticeable picture of the Incredulity of Thomas—the first work of sacred art which we find recorded from his hand. At Viterbo he made acquaintance with a mediocre poet named Abati, and was hence incited to try his own faculty in verse. He then returned to Naples. Here the monopolizing triumvirate—Ribera, Caracciolo, and Corenzio—were still powerful. Rosa was as yet too obscure to suffer from their machinations; but, having painted a picture of Tityus Torn by the Vulture, which went to Rome and there produced a great sensation, he found it politic to follow in the footsteps of his fame, and once more, in 1638, resought the papal city.

Rosa was a man of facile and versatile genius, and had by this time several strings to his bow. It is said that, still keeping painting steadily in view as his real objective, he resolved to secure attention first as a musician, poet, improvisatore, and actor—his mother-wit and broad Neapolitan dialect (which appears to have stuck to him through life) standing him powerfully in stead. In the carnival he masqued as Formica and Capitan Coviello, and bustled about Rome distributing satirical prescriptions for diseases of the body and more particularly of the mind. As Formica he inveighed against the farcical comedies acted in the Trastevere under the direction of the celebrated Bernini. Some of the actors, in one of their performances, retaliated by insulting Rosa, but the public was with him, and he now enjoyed every form of

success,—social prestige, abundant commissions, and any amount of money, which he was wont to throw about broadcast to the populace. In 1646 he returned to Naples, and is said to have taken an active part in the insurrection of Masaniello; certain it is that he sympathized with and admired the fisherman autocrat, for a passage in one of his satires proves this. His actual share in the insurrection is, however, dubious; it appears only in recent narratives, and the same is the case with the well-known story that at one time he herded with a band of brigands in the Abruzzi—an incident which cannot be conveniently dove-tailed into any of the known dates of his career. As regards the popular revolt against Spanish tyranny, it is alleged that Rosa, along with other painters—Coppola, Porpora, Micco Spadaro, Dal Po, Masturzo, the two Vaccari, and Cadogna—all under the captaincy of Aniello Falcone, formed the *Compagnia della Morte*, whose mission it was to hunt up Spaniards in the streets and despatch them, not sparing even those who had sought some place of religious asylum. He painted a portrait of Masaniello—probably from reminiscence rather than from life: indeed it is said that he painted him several times over in less than life size. On the approach of Don John of Austria the blood-stained *Compagnia* dispersed, Rosa escaping or at any rate returning to Rome. Here he painted some important subjects, showing the uncommon bent of his mind as it passed from landscape into history—Democritus amid Tombs, the Death of Socrates, Regulus in the Spiked Cask (these two are now in England), Justice Quitting the Earth, and the Wheel of Fortune. This last work, the tendency of which was bitingly satirical, raised a storm of ire and remonstrance. Rosa, endeavouring at conciliation, published a description of its meaning (probably softened down not a little from the real facts); none the less an order for his imprisonment was issued, but ultimately withheld at the instance of some powerful friends. It was about this time that Rosa wrote his satire named *Babylon*, under which name Rome was of course indicated.

Cardinal Giancarlo de' Medici now invited the painter to leave Rome—which had indeed become too hot to hold him—for Florence. Salvator gladly assented, and remained in the Tuscan capital for the better part of nine years, introducing there the new style of landscape; he had no pupils, but various imitators. Lorenzo Lippi the painter poet, Baldovini, and other *beaux esprits* shared with Rosa the hospitalities of the cardinal, and they formed an academy named *I Percossi* (the Stricken), indulging in a deal of ingenious jollity—Rosa being alike applauded as painter, poet, and musician. His chief intimate at this time was Lippi, whom he encouraged to proceed with the poem *Il Malmantile Racquistato*. He was well acquainted also with Ugo and Giulio Maffei, and housed with them more than once in Volterra, where he wrote other four satires—*Music*, *Poetry*, *Painting*, and *War*. About the same time he painted his own portrait, now in the Uffizi Gallery of Florence. Finally he reverted once more to Rome, and hardly left that city again. Much enmity still brooded there against him, taking the form more especially of an allegation that the satires which he zealously read and diffused in MS. were not his own production, but filched from some one else. Rosa indignantly repelled this charge, which remains indeed quite unsubstantiated, although it is true that the satires deal so extensively and with such ready manipulation in classical names, allusions, and anecdotes that one is rather at a loss to fix upon the period of his busy career at which Rosa could possibly have imbued his mind with such a multitude of semi-erudite details. It may perhaps be legitimate to suppose that his literary friends in Florence

and Volterra had coached him up to a large extent—the satires, as compositions, remaining none the less strictly and fully his own. To confute his detractors he now wrote the last of the series, entitled *Envy*. Among the pictures of his closing years were the admired Battlepiece now in the Louvre, painted in the short space of forty days, full of long-drawn carnage, with ships burning in the offing; Pythagoras and the Fishermen; the Oath of Catiline (Pitti Gallery); and the very celebrated Saul and the Witch of Endor (Louvre), which is perhaps his latest work. He undertook a series of satirical portraits, to be closed by one of himself, but while occupied with this project he was assailed by dropsy, which, after lasting fully half a year, brought his life to a close on 15th March 1673. In his last moments he married a Florentine named Lucrezia, who kept his house and had borne him two sons, one of them surviving him, and he died in a contrite frame of mind. He lies buried in the Chiesa degli Angeli, where a portrait of him has been set up. Salvator Rosa, after the hard struggles of his early youth, had always been a successful man, and he left a handsome fortune.

Rosa was indisputably a great leader in that modern tendency of fine art towards the romantic and picturesque which, developing in various directions and by diversified processes, has at last almost totally differentiated modern from olden art. He saw appearances with a new eye, and presented new images of them on his canvases, and deserves therefore all the credit due to a vigorous innovator, even if we contest the absolute value of his product. He himself courted reputation for his historical works, laying comparatively little stress on his landscapes; in portraits he was forcible. In chiaroscuro he is simple and effective; his design has energy and a certain grandeur, without any high type of form or any superior measure of correctness. His colour is too constantly of a sandy or yellowish-grey tone. Personally he was a man of high spirit, and he sold his pictures at large prices, more (it is said) to assert the honour of his art than from love of money; rather than sell them cheap he destroyed them. In his later Florentine period he etched several of his works, subjects of mythology, soldiering, &c. He was choleric, but kind and generous. Though a man of gaiety and pleasure, and a jovial boon companion, he does not appear to have been vicious in any serious degree. He was talkative, very sharp-tongued, and an unblushing encomiast of his own performances. Among his pictures not already mentioned we may name, in the London National Gallery, Mercury and the Dishonest Woodman, and two others; in Raynham Hall, Belisarius; in the Grosvenor Gallery, Diogenes; in the Pitti Gallery, a grand portrait of a man in armour, and the Temptation of St Anthony, which contains his own portrait. This last subject appears also in St Petersburg, and in the Berlin Gallery.

The satires of Salvator Rosa deserve more attention than they have generally received. Though considerably spread abroad during his lifetime, they were not published until 1719. They are all in terza rima, written without much literary correctness, but remarkably spirited, pointed, and even brilliant. They are slashingly denunciatory, and from this point of view too monotonous in treatment. Rosa here appears as a very severe castigatör of all ranks and conditions of men, not sparing the highest, and as a champion of the poor and down-trodden, and of moral virtue and Catholic faith. It seems odd that a man who took so free a part in the pleasures and diversions of life should be so ruthless to the ministers of these. The satire on *Music* exposes the insolence and profligacy of musicians, and the shame of courts and churches in encouraging them. *Poetry* dwells on the pedantry, imitativeness, adulation, affectation, and indecency of poets—also their poverty, and the neglect with which they were treated; and there is a very vigorous sortie against oppressive governors and aristocrats. Tasso's glory is upheld; Dante is spoken of as obsolete, and Ariosto as corrupting. *Painting* inveighs against the pictorial treatment of squalid subjects, such as beggars (though Rosa must surely himself have been partly responsible for this misdirection of the art), against the ignorance and lewdness of painters, and their tricks of trade, and the gross indecorum of painting sprawling half-naked saints of both sexes. *War* (which contains the eulogy of Masaniello) derides the folly of hiring soldiers, who fight and perish while kings stay at home; the vile morals of kings and lords, heresy, and unbelief also come in for a flagellation. In *Babylon* Rosa represents himself as a fisherman, Tirreno, constantly unlucky in his net-hauls on the Euphrates; he converses with a native of the country, Ergasto. *Babylon* (Rome) is very severely treated, and Naples much the same. *Envy* (the last of the satires, and generally accounted the best, although without strong apparent reason) represents Rosa

dreaming that, as he is about to inscribe in all modesty his name upon the threshold of the temple of glory, the goddess or fiend of Envy obstructs him, and a long interchange of reciprocal objur-gations ensues. Here occurs the highly-charged portrait of the chief Roman detractor of Salvator (we are not aware that he has ever been identified by name); and the painter protests that he would never condescend to do any of the lascivious work in painting so shamefully in vogue.

As authorities for the life of Salvator Rosa, Passeri, *Vite de' Pittori*, may be consulted, and Salvini, *Satire e Vita di Salvator Rosa*; also Balducci and Dominici. The *Life* by Lady Morgan is a romantic treatment, mingling tradition or mere fiction with fact. (W. M. R.)

ROSAMOND, FAIR. Rosamond Clifford, mistress of Henry II., was the daughter of Sir Walter Clifford, a Berkshire knight (Dugdale, *Monasticon*, iv. 366). She appears to have died in or about the year 1177, and was buried in the nunnery at Godstow. At the command of St Hugh, bishop of Lincoln, her body was removed from the church in which it had been buried, and was interred again outside the church. Such are all the facts that are known about Fair Rosamond. She is said to have been the mother of William Longsword, and of Geoffrey, arch-bishop of York. But this is impossible, for both William and Geoffrey were born before 1155, and Rosamond was still a girl at the time of her death. The story of the labyrinth or maze built by Henry to conceal her from Queen Eleanor occurs first in Brompton (end of 12th century). The legend of her death at Queen Eleanor's hand is variously related, but does not appear to be traceable beyond the first half of the 14th century. It can hardly be true in any form, for Eleanor was in confinement during the last fifteen years of Henry's reign.

ROSARIO, a river-port on the Paraná, and the chief town of a department in the province of Santa Fé in the Argentine Republic, 186 miles by river from Buenos Ayres. In 1853 an insignificant village, with less than four thousand inhabitants, it now ranks in commercial importance as the second city in the republic, being the centre of almost the entire trade of the eleven provinces lying between the Paraná and the Andes and the terminus of the great railways which since 1863 have gradually been pushed further north and west to Cordoba (1870), Tucuman (1876), Mendoza (1884), and San Juan (1885). The population had increased to 21,000 by 1870 and to 45,000 in 1883, while the imports in the latter year reached the value of £4,560,000 and the exports £3,780,000.

Rosario stands about 65 feet above the level of the river. It is laid out chess-board fashion; and the streets are paved, and lighted with gas (introduced in 1869). The area, 145 acres in 1870, is now about 2000 acres. Brick is the principal building material, and the houses are mostly of one story. There are no suburbs, the city terminating abruptly on the great plain. The industrial establishments are extensive foundries, a large number of brick kilns, a jam and fruit-preserving factory, breweries, tanneries, soap-works, saw-mills, and flour-mills.

Rosario was founded in 1725 by Don Francisco Godoy as a settlement of "reduced" Calchaqui Indians, and the parish was established in 1781 and dedicated to Our Lady of the Rosary, whose colours, blue and white, were adopted in 1813 as those of the national flag. The prosperity of the town dates from 1864, when it was made a port of entry by General Urquiza. In 1867 and 1868 it suffered from a severe cholera plague. The proposal to make Rosario the capital of the republic instead of Buenos Ayres has more than once been nearly carried in the legislature.

ROSARY (*Rosarium*, Germ. Rosenkranz) is defined in the Roman *Breviary* as a series of one hundred and fifty repetitions of the "Ave Maria," with a "Pater Noster" interpolated after each decade, the whole exercise being accompanied with pious meditation on the mysteries of redemption. This particular method of devotion, though said to have been not altogether unknown previously, first became extensively popular through St Dominic, who was admonished by the Virgin Mary to preach the rosary as

a special defence against heresy and vice. The Feast of the Rosary of the Blessed Virgin (Duplex Majus—first Sunday in October) was instituted by Clement XI. to commemorate the successes of the Christian arms against the Turks in 1716; it has reference also to the battle of Lepanto (Oct. 7, 1571). The word "rosary" or "chaplet" (capellina) is also employed to denote the string of beads of larger and smaller size by the use of which in repeating the rosary the faithful secure the due alternation of Ave Marias with Pater Nosters. In strict language the word chaplet is applied only to the "lesser" rosary, consisting of but fifty Aves and five Pater Nosters. Similar expedients to assist the memory in complex repetitions occur among Mohammedans and Buddhists: in the former case the so-called sobha has ninety-nine beads, and is used for the pious repetition of the ninety-nine names which express the attributes of God.

ROSAS, JUAN MANUEL DE, born at Buenos Ayres March 30, 1793, died in England March 14, 1877 (see ARGENTINE REPUBLIC, vol. ii. p. 491).

ROSCELLINUS (also written ROUSSELIN and RUC-ELINUS), often called the founder of nominalism (see SCHOLASTICISM), was born in Armorica or Lower Brittany somewhere about the middle of the 11th century. Our information about his life is scanty, and, as he appears to have written nothing, we are dependent for a knowledge of his doctrine upon the statements of his opponents and the cursory statements of later writers. He studied at Soissons and Rheims, was afterwards attached to the cathedral of Chartres, and became canon of Compiègne. It seems most probable that Roscellinus was not strictly the first to promulgate nominalistic doctrines; but in his exposition they received more definite expression, and, being applied to the dogma of the Trinity, attracted universal attention. The chief opponent of Roscellinus was Anselm of Canterbury, who defended at once the realistic doctrine of universals and the orthodox tradition of the church. It appears from the polemic of Anselm that "the heretics in dialectic" whom he combats denied the substantial reality of universals, asserting, for example, that colour has no real existence except as coloured body. There is no reason, however, to suppose that Roscellinus meant thereby to deny the real existence of attributive differences in things, though Anselm endeavours to involve him in that consequence. But we may conclude from the censure of his pupil Abelard that his reaction against realism had led Roscellinus into rashness of expression. In conformity with his general nominalistic position. Roscellinus taught that whatever exists as a real thing or substance exists as one self-identical whole, and is not susceptible of division into parts. This was the part of his teaching which created so much scandal when applied to the doctrine of the Trinity. Roscellinus maintained that it is merely a habit of speech which prevents our speaking of the three persons as three substances or three Gods. If it were otherwise, and the three persons were really one substance or thing (*una res*), we should be forced to admit that the Father and the Holy Spirit became incarnate along with the Son. Roscellinus seems to have put forward this doctrine in perfect good faith, and to have claimed for it at first the authority of Lanfranc and Anselm. In 1092, however, a council convoked by the archbishop of Rheims condemned his interpretation, and Roscellinus, who was in danger of being lynched by the orthodox populace, recanted his error. As his enforced penitence did not prove lasting, his opinions were condemned by a second council (1094), and he himself fled to England. Forced by a fresh persecution to return to France at a later date, he taught at Tours and Loc-menach in Brittany (where he had Abelard as a pupil), and resided

latterly as canon at Besançon. He is heard of as late as 1121, when he came forward to oppose Abelard's views on the Trinity.

ROSCOE, WILLIAM (1753–1831), historian and miscellaneous writer, was born March 8, 1753, at Liverpool, where his father, who was a market gardener, kept the public house known as the Bowling Green at Mount Pleasant. Young Roscoe showed an early eagerness in the acquisition of knowledge, and at twelve he left school, having learned all that his schoolmaster could teach. He now assisted his father in the work of the garden, and gave his leisure hours to reading and study. "This mode of life," he says, "gave health and vigour to my body, and amusement and instruction to my mind; and to this day I well remember the delicious sleep which succeeded my labours, from which I was again called at an early hour. If I were now asked whom I consider to be the happiest of the human race, I should answer, those who cultivate the earth by their own hands." At fifteen it was necessary to decide upon a path in life. A month's trial of bookselling sufficed to disgust him, and in 1769 he was articled to a solicitor, on whose death he was transferred to the office of Peter Ellames, who had more than a local reputation. Although a diligent student of law, he did not bid farewell to the Muses, but continued to read the classics, and made that acquaintance with the language and literature of Italy which became the instrument of his distinction in after life. He wrote many verses: his *Mount Pleasant* was composed when he was sixteen, and this and similar compositions, though now forgotten, won the esteem of good critics. In 1774 he commenced business as an attorney, and as soon as his professional gains warranted he married (1781). His sympathies were attracted to the miseries of the victims of the African slave trade, and he had the courage to denounce it in his native town, where not a little of the wealth came from this source. He wrote the *Wrongs of Africa* (1787–88), and entered into a controversy with an apostate Roman Catholic priest, who undertook to prove the "licitness of the slave trade" from the Bible. Roscoe was also a political pamphleteer, and like many other Liberals of the day hailed the promise of liberty in the French Revolution.

Meanwhile he had steadily pursued his Italian studies, and had made extensive collections relating to the great ruler of Florence. The result was his *Life of Lorenzo de' Medici, called the Magnificent*, which appeared in 1796, and at once placed him in the front rank of contemporary historians. The first edition was produced at Liverpool by John M'Creery, an elegant printer who had settled there by Roscoe's encouragement. Soon after the appearance of the book, Cadell & Davis bought the copyright for £1200. The work has often been reprinted, and translations in French, German, and other languages show that its popularity was not confined to its author's native land. Perhaps the most gratifying testimony was that of Fabroni, who had intended to translate his own Latin life of Lorenzo, but abandoned the design and induced Gaetano Mecherini to undertake an Italian version of Roscoe instead. In 1796 Roscoe gave up practice as an attorney, and had some thought of going to the bar, but abandoned the idea after keeping a single term. Between 1793 and 1800 he gave much attention to agriculture, and was one of those who helped to reclaim Chat Moss, near Manchester. He also succeeded in restoring to good order the affairs of a banking house in which his friend William Clark, then resident in Italy, was a partner. This task led to his introduction to the business, which eventually proved disastrous. His translation of Tansillo's *Nurse* appeared in 1798, and went through several editions. It is dedicated in a sonnet to

his wife, who had practised the precepts of the Italian poet.

The *Life and Pontificate of Leo the Tenth* appeared in 1805, and was a natural sequel to that by which he had made his reputation. For one half of the copyright he received £2000 from Cadell & Davis. The work, whilst it maintained its author's fame, did not, on the whole, meet with so favourable a reception as the *Life of Lorenzo*. It has been frequently reprinted, and the insertion of the Italian translation in the *Index* did not prevent its circulation even in the papal states. Roscoe was elected member of parliament for Liverpool in 1806, but the House of Commons was not a congenial place, and at the dissolution in the following year he declined to be again a candidate. The commercial troubles of 1816 brought into difficulties the banking house with which he was connected, and forced the sale of his collection of books and pictures. It was on this occasion that he wrote the fine *Sonnet on Parting with his Books*. After a five years' struggle to discharge the liabilities of the bank, the action of a small number of creditors forced the partners into bankruptcy in 1820. For a time Roscoe was in danger of arrest, but ultimately he received an honourable discharge. On the dispersal of his library, the volumes most useful to him were secured by friends and placed in the Liverpool Athenæum, where they still remain. The sum of £2500 was also invested for his benefit. The independent and sensitive nature of Roscoe made both these operations difficult. Having now resigned commercial pursuits entirely, he found a pleasant task in the arrangement of the great library at Holkham, the property of his friend Coke. In 1822 he issued an appendix of illustrations to his *Lorenzo* and also a *Memoir of Richard Robert Jones of Aberdaron*, a remarkable self-taught linguist. The year 1824 was memorable for the death of his wife and the publication of his edition of the works of Pope, which involved him in a controversy with Bowles. His versatility was shown by the appearance of a folio monograph on the *Monandrian Plants*, which was published in 1828. It appeared first in numbers, and the last part came out after his recovery from a paralytic attack. He died on the 30th June 1831.

Roscoe's character was a fine one. Under circumstances uncongenial and discouraging he steadfastly maintained the ideal of the intellectual life. Sensitive and conscientious, he sacrificed his possessions to a punctilious sense of duty. He had the courage of unpopular opinions, and, whilst promoting every good object in his native town, did not hesitate to speak out where plain dealing, as in the matter of slavery, was required. Nor was his public life more meritorious than his private career, for he was a sincere friend and exemplary in his domestic relations. Posterity is not likely to endorse the verdict of Horace Walpole, who thought Roscoe "by far the best of our historians," but in spite of newer lights and of some changes of fashion in the world of letters, his books on Lorenzo de' Medici and Leo X. remain important contributions to historical literature.

In addition to the writings already named, Roscoe wrote tracts on penal jurisprudence, and contributed to the *Transactions* of the Royal Society of Literature and of the Linnean Society. The first collected edition of his *Poetical Works* was published in 1857, and is sadly incomplete, omitting, with other verses known to be from his pen, the *Butterfly's Ball*, a fantasy, which has charmed thousands of children since it appeared in 1820–21 in *Poems for Youth, by a Family Circle*. The *Life* by his son Henry Roscoe (2 vols., London, 1838) contains full details of Roscoe's career. Fuller bibliographical details are given in *Allibone's Dictionary of English Literature*. (W. E. A. A.)

ROSCOMMON, an inland county of Ireland, in the province of Connaught, is bounded N.E. by Leitrim, N.W. by Sligo, W. by Mayo, W. and S. by Galway, E. by Longford, and E. and S. by Westmeath and King's County. The total area is 607,691 acres or nearly 950 square miles. The greater part of the county belongs to the great limestone plain, and is either flat or very slightly undulating. In the north-east, on the Leitrim border, the Braulieve Mountains, consisting of rugged and precipitous ridges of limestone gravel with flattened summits, attain an elevation at their highest point of 1377 feet; and in the north-

west the Curlew Mountains, of similar formation, between Roscommon and Sligo rise abruptly to a height of over 800 feet. In the east the Slievebawn range, formed of sandstone, have a somewhat similar elevation. The Connaught coal field, which embraces the mountainous district round Lough Allen, touches on Roscommon, but the mineral is not much wrought within the limits of the county. Ironstone is also found in the same district, but mining is no longer prosecuted. The Shannon with its expansions forms nearly the whole eastern boundary of the county, and on the west the Suck from Mayo forms for over 50 miles the boundary with Galway till it unites with the Shannon at Shannon Bridge. The other tributaries of the Shannon within the county are the Arigna, the Feorish, and the Boyle. The lakes formed by expansions of the Shannon on the borders of Roscommon are Loughs Allen, Boderg, Boffin, Forbes, and Ree. Of the numerous other lakes within the county the most important are Lough Key in the north, very picturesquely situated with finely wooded banks, and Lough Gara in the west.

Agriculture.—The subsoil is principally limestone, but there is some light sandy soil in the south. In the level parts the land when drained and properly cultivated is very fertile, especially in the district known as the plains of Boyle, which includes some of the richest grazing land in Ireland. Along the banks of the Suck and Shannon there is, however, a large extent of bog and marsh. Of the 130,426 acres in crop in 1884 only 61,055 acres were under tillage, while 69,371 acres were under meadow and clover. Corn crops occupied 26,931 acres, of which 26,246 were under oats; and green crops occupied 33,443 acres, of which 26,178 were under potatoes and 5236 under turnips. Horses and mules in 1884 numbered 11,134, cattle 106,546 (of which 27,084 were milch cows), asses 8801, sheep 147,077, pigs 35,493, and goats 10,822. According to the latest return the county was divided among 707 proprietors possessing 577,999 acres at an annual valuation of £294,698. The following possessed upwards of 20,000 acres:—Colonel King-Harman, 29,242 acres; H. S. P. Mahon, 26,980; Lord De Freyne, 25,437; and Thos. Wills-Sandford, 24,411.

Railways.—A branch of the Midland Great Western Railway traverses the north-eastern boundary of the county to Sligo, and another the south-western boundary to Westport, whilst a third crosses the southern corner to Galway.

Administration and Population.—The county is divided into 10 baronies, and contains 53 parishes, 7 parts of parishes, and 1995 townlands. The population in 1881 was 132,490—a decrease of nearly one-half since 1841, when it was 253,591. The number of persons who could read and write in 1881 was 66,858, the number who could read only was 13,373, while 47,259 were unable to read or write. The number who spoke Irish and English was 21,494, and 95 were able to speak Irish only. The towns containing over 1000 inhabitants are Roscommon, the county town (2117), Boyle (2994), and Castlerea (1229). Within the county are also included a part (3683) of Athlone, the remainder being in Westmeath, a part (947) of Ballinasloe, the larger part being in Galway, and a very small portion (100) of Carrick-on-Shannon, which is situated chiefly in Leitrim. Ecclesiastically the county belongs to the Elphin diocese, with small portions in those of Tuam, Clonfert, and Ardagh. It is in the Connaught circuit. Assizes are held at Roscommon and quarter sessions at Athlone, Boyle, Castlerea, and Roscommon. There are nine petty sessions districts within the county and parts of four others. It is in the Dublin military district, and there are barrack stations at Athlone, Boyle, Castlerea, and Roscommon.

History.—The district was granted by Henry III. to Richard de Burgo, but remained almost wholly in the possession of the native septs. Until the time of Elizabeth Connaught was included in the two districts of Roscommon and Clare, and when these were subdivided Roscommon was assigned its present limits. It takes its name (Irish *Ros-Comain*, Comain's wood) from the county town, at which a monastery was founded by St Coman in the 6th century. All the old proprietors were dispossessed at the Cromwellian settlement, except the O'Connor family, now headed by the O'Connor Don. The most interesting antiquarian remains within the county are the ruins of Crogan, the ancient palace of the kings of Connaught. The principal ancient castles are the old stronghold of the M'Dermotts on Castle Island, Lough Key, the dismantled castle of the M'Donoughs at Ballinacree, the extensive fortress at Roscommon rebuilt by John D'Ufford, justiciary of Ireland in 1268, and the keep of Athlone, now used as barracks. The abbey of Boyle is in remarkably good preservation, and exhibits good specimens of the Norman arch. The other monastic remains within the county are of comparatively small importance.

ROSCOMMON, WENTWORTH DILLON, EARL OF (1634–1684), one of the pioneers of the so-called "classical" school in English poetry, owed his burial in Westminster Abbey more to his rank than to his achievements in poetry. But his *Essay on Translated Verse* (1684), though feeble in thought, has a certain distinction in the history of our literature as being the first definite enunciation of the principles of the "poetic diction" of our Augustan age. He is very refined and fastidious in his notions of dignified writing, and intimates, though with a genteel affectation of humility, that the "railing heroes" and "wounded gods" of Homer are too vulgar for a correct taste. He himself wrote in the finest of diction, but he wrote little. On Fenton's remark that his imagination might have been more fertile if his judgment had been less severe Johnson makes the comment that his judgment might have been less severe if his imagination had been more fertile. The subjects of his half-dozen of original poems range from the death of a pet dog to the day of judgment, both treated in the same elevated and conventional style. Roscommon, a nephew of the great earl of Strafford, was born in Ireland, and educated partly under a tutor at his uncle's seat in Yorkshire, partly at Caen in Normandy, and partly at Rome. He published a translation of Horace's *Art of Poetry* in 1680.

ROSE (*Rosa*). The rose has for all ages been the favourite flower, and as such it has a place in general literature that no other plant can rival. In most cases the rose of the poets and the rose of the botanist are one and the same in kind, but popular usage has attached the name rose to a variety of plants whose kinship to the true plant no botanist would for a moment admit. In this place we shall employ the word in its strict botanical significance, and in commenting on it treat it solely from the botanical point of view (see also HORTICULTURE, vol. xii. p. 260). The rose gives its name to the order *Rosaceæ*, of which it may be considered the type. The genus consists of species varying in number, according to the diverse opinions of botanists of opposite schools, from thirty to one hundred and eighty, or even two hundred and fifty, exclusive of the many hundreds of mere garden varieties. While the lowest estimate is doubtless too low, the highest is enormously too large, but in any case the wide discrepancies above alluded to illustrate very forcibly the extreme variability of the plants, their adaptability to various conditions, and consequently their wide dispersion over the globe, the facility with which they are cultivated, and the readiness with which new varieties are continually being produced in gardens by the art of the hybridizer or the careful selection of the raiser. The species are natives of all parts of the northern hemisphere, but are scantily represented in the tropics unless at considerable elevations.

They are erect or climbing shrubs, never herbs or trees, generally more or less copiously provided with thorns of various shapes and with glandular hairs, as in the sweet brier or in the moss rose of gardens. The thorns serve the purpose of enabling the shrub to sustain itself amid other vegetation, and perhaps in some sort serve as a protection against marauders. The viscid hairs which are specially frequent on the flower stalks or in the neighbourhood of the flower serve to arrest the progress of undesirable visitants, while the perfume emitted by the glands in question may co-operate with the fragrance and colour of the flower to attract those insects whose presence is desirable. The leaves are invariably alternate, provided with stipules, and unequally pinnate, the stipules themselves being in this case perhaps merely the lowest pair of "pinnae" or leaflets less perfectly developed than the others. The flowers are solitary or in loose cymes (cluster-roses) produced on the ends of the shoots. The flower-stalk expands into a vase- or urn-shaped dilatation, called the receptacle or receptacular tube, which ultimately becomes fleshy and encloses in its cavity the numerous carpels or fruits. From the edge of the urn or "hip" proceed five sepals, often more or less compounded like the leaves and overlapping in the bud. Within the sepals are five petals, generally

broad or roundish in outline, with a very short stalk or none at all, and of all hues except blue. The very numerous stamens originate from about the same spot as the sepals and petals; each has a slender filament and a small two-celled anther. The inner portion of the receptacular tube whence the stamens spring is thick and fleshy, and is occasionally spoken of as the "disk"; but, as in this case it does not represent any separate organ, it is better to avoid the use of the term. The carpels are very numerous, ultimately hard in texture, covered with hairs, and each provided with a long style and button-like stigma. The carpels are concealed within the receptacular tube and only the stigmas as a rule protrude from its mouth. Each carpel contains one ovule without perisperm. The so-called fruit is merely the receptacular tube, which, as previously mentioned, becomes fleshy and brightly coloured as an attraction to birds, which devour the hips and thus secure the dispersion of the seed. The stamens are in whorls, and, according to Payer, they originate in pairs one on each side of the base of each petal (parapetalous), so that there are ten in each row; a second row of ten alternates with the first, a third with the second, and so on. By repeated radial and tangential branching a vast number of stamens are ultimately produced, and when these stamens assume a petaloid aspect we have as a consequence the double flowers which are so much admired. The carpels are much less subject to this petaloid change, and, as it generally happens in the most double of roses that some few at least of the anthers are formed with pollen, the production of seed and the possibility of cross-breeding become intelligible. Under natural circumstances rose flowers do not secrete honey, the attraction for insects being provided, according to Müller, by the colour and perfume and the abundance of pollen for food. The stigmas and anthers come to maturity at the same time, and thus, while cross-fertilization by insect agency is doubtless most common, close fertilization is not prevented.

In *The Student's Flora* Sir Joseph Hooker recognizes seven species of *Rosa* as British. Among them may be mentioned *R. spinosissima*, the Scotch Rose, much less variable than the others, *R. rubiginosa*, the Sweet Brier, represented by several varieties, *R. canina*, the Dog Rose, of which no fewer than twenty-nine varieties are described, and *R. arvensis*. Cultivated roses are frequently "budded" or worked upon the stems of the brier or *R. canina*, or upon young seedling plants of the same species. Other species also are used for stocks (see HORTICULTURE). Roses have been grown for so many centuries and have been crossed and recrossed so often that it is difficult to refer the cultivated forms to their wild prototypes. The older roses doubtless originated from *R. gallica*, a native of central and southern Europe. *R. centifolia* (the Cabbage Rose), a native of the Caucasus, contributed its share. A cross between the two species named may have been the source whence originated the Bourbon Roses. The yellow-flowered Austrian and Persian Brier originated from *R. eglanteria*, a native of Austria. The Monthly or China Roses sprang from the Chinese *R. indica*, and these crossed with others of the *R. centifolia* or *gallica* type are the source of the hybrid perpetuals so commonly grown nowadays, because, in addition to their other attractions, their blooming season is relatively prolonged, and, moreover, is repeated in the autumn. Tea Roses and Noisettes, it is to be presumed, also acknowledge *Rosa indica* as one of their progenitors. The Banksian Rose is a Chinese climbing species, with small white or fawn-coloured flowers of great beauty; the Macartney Rose (*R. bracteata*) is also of Chinese origin. Its nearly evergreen deep green leaves and large white flowers are very striking. The Japanese *R. rugosa* is also a remarkable species, notable for its bold rugose foliage, its large white or pink flowers, and its conspicuous globular fruit. *R. damascena* is cultivated in some parts of Roumelia for the purpose of making attar of roses (see OILS and PERFUMERY). According to Hanbury, the flowers are gathered before sunrise and distilled the same day. The distilled liquid is allowed to remain for a day or two, by which time most of the oil will have risen to the surface, from which it is skimmed off. The percentage yielded is very small, not more than 0.04.

In India *R. damascena* is grown largely near Ghazipur for the purpose of procuring attar of roses and rose water. The roses are distilled with double their weight of water. The attar is skimmed off in the Turkish method. Colonel Drury mentions that it takes 200,000 roses to yield the weight of a rupee in attar. This quantity sells on the spot for 100 rupees.

Rose water is chiefly produced in Europe from the Provence or cabbage rose, *R. centifolia*, grown for the purpose at Mitcham and much more abundantly in the south of France. Conserve of roses and infusion of roses, two medicinal preparations retained for their agreeable qualities rather than for any special virtue, are prepared from the petals of *Rosa gallica*, one variety of which was formerly grown for the purpose near the town of Provins. Conserve of dog rose is made from the ripe hips of the dog rose, *Rosa canina*. Its only use is in the manufacture of pills.

The name ROSE of JERICO is popularly applied to a small Cruciferous weed, *Anastatica hierochuntina*, a native of the desert

regions of Egypt, Arabia, Palestine, and Persia. In the dry season the dead branches are strongly incurved, and thus serve to protect the still living seed in the pods. In the wet season the branches absorb the moisture to a large extent, unfold, resume the direction they had in life, and facilitate the dispersion of the seed under circumstances favourable to germination. The plant is frequently carried off as a curiosity, inasmuch as immersion in a basin of water enables it to resume the original form and to create the impression that the plant "comes to life again," but the process is purely a physical one.

ROSELLINI, IPPOLITO (1800–1843), a native of Pisa and subsequently professor there of Oriental languages, in which Mezzofanti was his teacher, is best known as the associate of J. F. CHAMPOLLION (*q.v.*), whose studies he shared and whom he accompanied in his Egyptian explorations (1828). On the death of Champollion the publication of the results of their expedition fell to Rosellini (*Monumenti dell'Egitto e della Nubia*, Florence, 1832–1840, 10 vols. fol.).

ROSEMARY (*Rosmarinus*), a well-known Labiate plant, the only representative of the genus and a native of the Mediterranean region. It is a low shrub with linear leaves, dark green above, white beneath, and with margins rolled back on to the under surface. The flowers are in small axillary clusters. Each has a two-lipped calyx, from which projects a bluish two-lipped corolla enclosing two stamens, the other two being deficient. The fruit consists of four smooth nutlets. Botanically the genus is near to *Salvia*, but it differs in the shorter connective to the anther. Rosemary was highly esteemed by the ancients for its aromatic fragrance and medicinal uses. In modern times it is valued mainly as a perfume, for which purpose the oil is obtained by distillation. It doubtless has slight stimulant properties, which may account for the general belief in the efficacy of the plant in promoting the growth of the hair. Rosemary plays no unimportant part in literature and folk-lore, being esteemed as an emblem of remembrance. "There's rosemary, that's for remembrance," says Ophelia. Its use in connexion with funeral ceremonies is not extinct in country places to this day, and it was formerly as much valued at wedding festivities. The name "*ros marinus*" or "*ros maris*" was probably given in allusion to its native habitat in the neighbourhood of the sea.

ROSETTA (see EGYPT, vol. vii. p. 768). The celebrated Rosetta Stone, a basalt stele containing a decree of Ptolemy V. Epiphanes in hieroglyphics, demotic, and Greek, which supplied the key for the decipherment of the ancient monuments of Egypt, was found near Fort St Julien, 4 miles north of the town, in 1799, by Boussard, a French officer. It is now in the British Museum.

ROSEWOOD. Under this name several distinct kinds of ornamental timber are more or less known. That, however, so called in the United Kingdom is Brazilian rosewood, the *palissandre* of the French, the finest qualities of which, coming from the provinces of Rio de Janeiro and Bahia, are believed to be the produce principally of *Dalbergia nigra*, a Leguminous tree of large dimensions, called *cabiuna* and *jacaranda* by the Brazilians. The same name, *jacaranda*, is applied to several species of *Machærium*, also trees belonging to the natural order *Leguminosæ*; and there can be no doubt that a certain proportion of the rosewood of commerce is drawn from these sources. Formerly Brazilian rosewood was said, on the authority of the French botanist and traveller Guillemain, to be the produce of a species of *Triptolomæa*, but that genus has now been constituted a section of *Dalbergia*. Rosewood comes to the United Kingdom from Rio, Bahia, Jamaica, and Honduras. The heartwood attains large dimensions, but as it begins to decay before the tree arrives at maturity it is always faulty and hollow in the centre. On this account squared logs or planks of rose-

wood are never seen, the wood being imported in half round fitches 10 to 20 feet in length and from 5 to 12 inches in their thickest part. Owing to its irregular form the wood is sold by weight, and its value varies within wide limits according to the richness of colour. Rosewood has a deep ruddy brown colour, richly streaked and grained with black resinous layers. It takes a fine polish, but on account of its resinous nature it is somewhat difficult to work. The wood is very much in demand both by cabinetmakers and pianoforte-makers, by whom it is used both solid and in veneer.

The wood of *Dalbergia latifolia*, a native of the East Indies used for ornamental furniture and carvings under the name of black wood, is frequently termed East Indian Rosewood, as is also the allied tree of Madras, *Dalbergia sissooides*. The *Bois de Rose* of the French, the Portuguese *Pao de Rosa*, and the German *Rosenholz*, is a Brazilian wood, the produce of *Physocalymma floribunda*, called in the United Kingdom tulip wood, and very highly esteemed on account of its beautiful rose colour and grain. African rosewood is from *Pterocarpus erinaceus*, Dominican from *Cordia Gerascanthus*, and in New South Wales the wood of *Synorum glandulosum* locally receives the same name.

ROSH, also HAROSH (רֹשׁ, רֹשֶׁת, i.e., "chief," "the chief"), stands by contraction for Rabbenu Asher, or Harab Rabbenu Asher (b. Yehiel), chief rabbi of all Castile. He was born in Germany about the middle of the 13th century and died at Toledo on the 25th of October 1327.¹

Rosh enjoys a sixfold celebrity. (1) He was a descendant of a long line of distinguished ancestors, among whom RABAN (q.v.) may be specially named. (2) He was "the distinguished of the most distinguished disciples" ² of the foremost rabbi of his age in Germany, viz., Rabbenu Meir b. Barukh, better known under the name of R. Meir of Rothenburg, whose tragic fate³ even more than his learning and piety has endeared him to all Jews down to this very day. (3) He was the father of eight great Rabbinic scholars.⁴ (4) He was in his own right, after 1293 in Germany

¹ See Schiller-Szinessy, *Catal. Heb. MSS.*, &c., i. p. 66, note 3, and ii. p. 77, note 3.

² R. Meir of Rothenburg (see next note) had among his many disciples four more distinguished than the rest:—(1) R. Mordekhai b. Hillel, who was slain with his wife and children at Nuremberg in 1310,—a fine Latin and general scholar and author of the *Mordekhai*, now an integral part of the *Rit'ah* (q.v.); (2) R. Meir Hakohen, the author of the *Haggadoth Maimoniyoth*, now an integral part of the *Mishneh Torah* of MAIMONIDES (q.v.); (3) R. Shimson b. Sadok, who wrote his master's *Tashbez* in prison, &c. (see *Catal. Arab. MSS. of Trin. Coll., Camb.*, App. p. 229); (4) Rosh.

³ The persecutions and massacres of the Jews in many parts of Germany in the 13th century made life so unendurable that the wealthier of them determined to quit the land of their birth and to emigrate to that of their ancient fathers. R. Meir of Rothenburg, being at the head of the emigration, had in the spring of 1286, with his whole family and several other families, already arrived in Lombardy. But one Kinppa, or Knippa, or Konpil, i.e., *Koppel* (= Jacob), a converted Jew, recognised and betrayed him to his master, the bishop (? *יבן*) of Basel, who had him arrested by Captain Meinert (Meinhard) of Götze, who handed him over to the emperor. Rudolph of Hapsburg, who had only a dozen years before or so (to speak in the great German poet's language) "made an end, after the long destructive strife, to the emperorless, terrible time," was, though very rich in dignities, as yet comparatively poor in purse. He therefore, in the midsummer of the same year (to extort money from the Jews), caused the poor rabbi to be imprisoned in the tower of Ensisheim (in Alsace) and subsequently in other places,—e.g., Weissenburg, or Wasselburg (*יבן*). Considerable sums were offered by the Jews for their revered chief, but the negotiations were brought to naught by the command of the rabbi himself, who would not permit more than a trifling sum to be given for his release (RASHAI (q.v.), *Yam shel Shelomoh*, on Gittin, iv. 68). He died in prison in 1293. Rudolph's successors, Adolph of Nassau (1291–1298) and Albrecht of Austria (1298–1308), were so heartless as not to deliver up for nearly fourteen years the poor rabbi's corpse for burial, hoping to extort from the Jews even greater sums than they had originally offered to Rudolph for the rabbi alive. In 1307, however, a rich and pious but childless man, Alexander Süskind Wimpfen of Frankfurt, offered an enormous sum on the condition that the congregation of Worms should bury the rabbi's corpse and should allow at his own death his body to rest near it (see Lewysohn, *Sefer Eshkol*, p. 100, *zu Worms*, Frankfurt-on-Main, 1856, 8vo, pp. 35–41). R. Meir of Rothenburg was not merely a fine Biblical and Rabbinic scholar but also a great Cabbalist, as R. David b. Yehudah Rashi testifies in his *Mar'oth Hasheboeth* (Camb. Univ. MS. Add. 664, leaf 72a). Most of his literary productions are incorporated with works of his disciples and the disciples of these disciples. For instance, some of his massoretico-ethical explanations are to be found in R. Ya'akov b. Asher's so-called *Ba'al Hatruvot*, and part of his commentary on the Mishnah is to be found in R. Yomtov Lipmann Heller's *Tosephoth Yomtov* (see MISNAR). Other Rabbinic work of his is to be found in *Rosh*, *Mordekhai*, &c. But there exists also independent literature of his as (1) *Tosephoth on Yoma* (in the editions of the Babylonian Talmud); (2) *Responsa*, in three volumes (I., Cremona, 1557, 4to; II., Prague, 1608, fol., which contains, however, matter by other authors also, as Rabbenu Gershom, Rabbenu Tam, the *Takkanoth Shum*, Rules of Penitence, by R. El'azar of Worms, &c.; III., Lemberg, 1860, 4to); (3) *Tashbez* (see last note); (4) *Birkhoth Maharam* (Riva di Trento, 1558, 8vo); (5) religious poems of considerable value, which are to be found in the Ashkenazic *Ma'azor*.

⁴ Of these we will only mention two. (1) R. Yehudah, his successor in the rabbinate, is the author of the *Zikron Yehudah* (*Responsa*, Berlin, 1846, 4to). (2) Rabbenu Ya'akov, is the author of (a) the *Turim*, printed times innumerable (*ed. princeps*, Pieve di Sacco, 1475, fol.), a code of laws for a long time normative, but now almost superseded by the *Shulchan Arukh* of R. Yoseph Caro (see

and after 1310 everywhere, the greatest Talmudist.⁵ (5) He was the first rabbi of the Ashkenazic school who possessed powers of systematization. (6) He was a man not merely of the deepest piety but of the sternest and, if we may say so, the most savage⁶ morality. Rosh, in despair at the state of affairs in Germany (some, however, say through his being involved in negotiations with the emperor for the delivery of the body of his master, which he could not bring to a successful issue),⁷ left his home and travelled aimlessly about with his numerous family till he arrived in Provence. There he would have remained gladly had not the Maimonidean controversy broken out.⁸ He went therefore to Castile, where Toledo, jealous of Barcelona possessing such a great rabbi as R. Shelomoh Ibn Addeheth was,⁹ received him with open arms and great respect and elected him their rabbi. Under his eyes the celebrated astronomical work *Yesod Olam*, by R. Yishak b. Yoseph Yisraeli, was composed.¹⁰

Of the numerous works by Rosh, which have been printed times innumerable, we can only mention the most important:—

(1) Commentary on the Pentateuch (see *Hadar Zekenim*, Leghorn, 1840, folio). (2) Commentary on the Mishnic treatises of the orders *Zera'im* and *Tohoroth* (see editions of the Babylonian Talmud). (3) Commentary on the whole Babylonian Talmud (*ibid.*; the *Kisur Piseke Harosh* is by Rabbenu Ya'akov, the author's son, see note 4). (4) *Toseph Harosh* on several treatises (see Schiller-Szinessy, *Catalogue*, ii. pp. 76–94). (5) *Responsa* (Constantinople, 1517, folio, and reprints). (6) *Halakhoth Ketannah* (see Talmud editions). (7) *Hanhagah*, *Seva'h*, &c. (Testament, &c., Venice, 1578, 16mo, and reprints). (S. M. S.-S.)

ROSICRUCIANS (ROSENKREUZER), a celebrated but entirely fabulous secret society. In 1614 there appeared at Cassel an anonymous German work, *Allgemeine und General-Reformation der ganzen Welt beneben der Fama Fraternitatis des löblichen Ordens des Rosenkreuzes*, inviting the scholars of Europe to test the pretensions and join the ranks of a secret society, said to have been founded two hundred years before by a certain Christian Rosenkreuz, who had acquired on a pilgrimage the hidden wisdom of the East. The society, according to this account, possessed many secret gifts of knowledge, of which goldmaking was one of the least. Its character was Christian and of Protestant type; its chief aim was the gratuitous healing of the sick. Though the origin of the *Fama* and some subsequent tracts in supplement to it has never been made quite clear, it has generally been held that Arnold, in his *Kirchen- und Ketzer-Historie*, renders it highly probable that the author was the talented theologian and polymath Johann Valentin Andreae (1586–1654), and that the book was originally a sort of elaborate joke composed in the stift at Tübingen. But the marvellous elements in the account of Rosenkreuz and his society only served in that age to draw serious attention to the supposed order. A large controversial literature sprang up, and, while some violently condemned the Rosicrucians as heretics in theology and medicine, others, and among them R. FLUDD (q.v.), defended them and hoped great things from the enlarged activity which was proposed for them in the *Fama* and its companion tracts. Gradually it came to be generally seen that the whole thing was a mystification. The name and fable of the Rosicrucians have, however, from time to time been made use of by such impostors as Cagliostro.

ROSIN, or COLOPHONY, is the resinous constituent of the oleo-resin exuded by various species of pine, known in commerce as crude turpentine (see TURPENTINE). The separation of the oleo-resin into the essential oil-spirit of turpentine and common rosin is effected by distillation in large copper stills. The essential oil is carried off at a heat of between 212° and 316°, leaving fluid rosin, which is run off through a tap at the bottom of the still, purified by passing through a straining wadding, and received into

RASHAI, note 1); (5) the commentary on the Pentateuch mentioned in the foregoing note, a portion of which forms now an integral part of every Rabbinic Bible (it was first issued at Constantinople in 1514, 4to); and (6) the *Kisur Piseke Harosh* (Constantinople, 1515, fol.).

⁵ I.e., after the death of his master and that of R. Shelomoh b. Abraham Ibn Addeheth (see RASHBA III.).

¹⁰ Printed in 1771, and from an ancient MS. again in 1848, both times at Berlin and in 4to. The library of Cambridge university possesses a most valuable MS. of it (Oo. 6. 65).

a vat, whence it is ladled into barrels ready for the market. Rosin varies in colour, according to the age of the tree whence the turpentine is drawn and the amount of heat applied in distillation, from an opaque almost pitchy black substance through grades of brown and yellow to an almost perfectly transparent colourless glassy mass. The commercial grades are numerous, ranging by letters from A, the darkest, to N, extra pale,—superior to which are W, “window glass,” and WW, “water white” varieties, the latter having about three times the value of the common qualities. Rosin is a very brittle and friable resin, with a faint piny odour, softening at about 176° and melting completely at the temperature of boiling water. It dissolves freely in ether, benzol, and chloroform, and to some extent in alcohol and fatty oils. When exposed to the action of hot dilute alcohol or when boiled with alkaline solutions it takes up a molecule of water and becomes converted into abietic acid, a change which also takes place slowly in the air when the resin is yet mixed with the essential oil as it flows from the trees. Rosin is thus regarded as an anhydride of abietic acid, and its use in yellow soaps is due to the fact that this acid itself combines with caustic alkalies to form a kind of soap. In addition to its extensive use in soap-making, rosin is largely employed in making inferior varnishes, sealing wax, and various cements. It is also used for preparing shoemaker’s wax, for soldering metals, for pitching lager beer casks, for rosinning the bows of musical instruments, and numerous minor purposes. In pharmacy it forms an ingredient in several plasters and ointments. On a large scale it is treated by destructive distillation for the production of an oily complex hydrocarbon, having a tarry odour and a whitish opalescent colour, which under the name of rosin oil is much used as a lubricant. Rosin oil also enters extensively into the common kinds of fatty oils as an adulterant.

The chief region of rosin production is the southern coast States of the American Union,—the ports of Wilmington, Charleston, Savannah, and Brunswick being the principal centres of the trade. American rosin is obtained from the turpentine of the swamp pine, *Pinus australis*, and of the loblolly pine, *P. Tæda*. The main source of supply in Europe is the “landes” of the departments of Gironde and Landes in France, where the sea pine, *P. maritima*, is extensively cultivated. In the north of Europe rosin is obtained from the Scotch fir, *P. sylvestris*, and throughout European countries local supplies are obtained from other species of pine. The imports into the United Kingdom average about 1,250,000 cwts. annually, nearly the whole of which comes from America. In 1888 the amount imported was 1,377,368 cwts. (1,337,848 cwts. from the United States and 16,242 cwts. from France), the total estimated value of the imports being £400,938.

ROSMINI-SERBATI, ANTONIO (1797–1855), perhaps the most important figure in modern Italian philosophy, was born at Rovereto in the Italian Tyrol in 1797, and died in 1855. With every worldly advantage as the eldest son of a noble and wealthy family, from an early age he resolved to devote himself to God’s service in the Catholic priesthood. He became the founder of a new religious order, named the Institute of Charity, but known in Italy generally as the Rosminians. The members may be priests or laymen. All are prepared to do any works of charity—corporal, intellectual, or spiritual—to which they may be directed by divine providence, under obedience to their superior, to the bishops, and to the pope. They have branches in Italy, England, Ireland, France, and America. In London they are attached to the ancient church of St Etheldreda, Ely Place, Holborn, where the English translations of Rosmini’s works are edited.

Rosmini’s *Sistema Filosofico* set forth the conception of a complete encyclopædia of the human knowable, synthetically conjoined, according to the order of ideas, in a perfectly harmonious whole. This conception Rosmini developed in more than forty volumes. Here a brief

notice of the characteristic principle of his philosophy must suffice.

Rosmini, contemplating the position of recent philosophy from Locke to Hegel, and having his eye directed to the ancient and fundamental problem of the origin, truth, and certainty of our ideas, wrote:—“If philosophy is to be restored to love and respect, I think it will be necessary, in part, to return to the teachings of the ancients, and in part to give those teachings the benefit of modern methods” (*Theodicy*, n. 148). Pursuing therefore the now generally approved method of the observation of facts, he most carefully examined and analysed the fact of human knowledge, and obtained the following results:—(1) that the notion or idea of being or existence in general enters into, and is presupposed by, all our acquired cognitions, so that, without it, they would be impossible; (2) that this idea is essentially objective, inasmuch as what is seen in it is as distinct from and opposed to the mind that sees it as the light is from the eye that looks at it; (3) that it is essentially true, because “being” and “truth” are convertible terms, and because in the vision of it the mind cannot err, since error could only be committed by a judgment, and here there is no judgment, but a pure intuition affirming nothing and denying nothing; (4) that by the application of this essentially objective and true idea the human being intellectually perceives, first, the animal body individually conjoined with him, and then, on occasion of the sensations produced in him *not by himself*, the causes of those sensations, that is, from the action felt he perceives and affirms an agent, a being, and therefore a true thing, that acts on him, and he thus gets at the external world,—these are the true primitive judgments, containing (a) the subsistence of the particular being (subject), and (b) its essence or species as determined by the quality of the action felt from it (predicate); (5) that reflexion, by separating the essence or species from the subsistence, obtains the full specific idea (universalization), and then from this, by leaving aside some of its elements, the abstract specific idea (abstraction); (6) that the mind, having reached this stage of development, can proceed to further and further abstracts, including the first principles of reasoning, the principles of the several sciences, complex ideas, groups of ideas, and so on without end; (7) finally, that the same most universal idea of being, this generator and formal element of all acquired cognitions, cannot itself be acquired, but must be innate in us, implanted by God in our nature. Being, as naturally shining to our mind, must therefore be what men call the light of reason. Hence the name Rosmini gives it of ideal being; and this he laid down as the one true fundamental principle of all philosophy, and the supreme criterion of truth and certainty. This he firmly believed to be the teaching of St Augustine, as well as of St Thomas, of whom he was an ardent admirer and defender. The above seven points could only be hinted at here. A complete and exhaustive treatment of them will be found in Rosmini’s *New Essay on the Origin of Ideas*, which has lately been rendered into English (London, 1883–84).

Rosmini’s *Sistema Filosofico* has been translated into English by Davidson (*Rosmini’s Philosophical System*, London, 1882). The volume contains also a biographical sketch of the author, with a complete catalogue of his writings, ninety-nine in all, on philosophical, religious, and miscellaneous subjects, and a copious list of works relating to his life and philosophy.

ROSS, a county in the north of Scotland. CROMARTY (q.v.) consists of detached portions scattered throughout Ross, and for most administrative purposes the two counties are regarded as one. The united area of their mainland portion lies between 57° 8' and 58° 6' N. lat., and 3° 47' and 5° 52' W. long., and is bounded N. by the Dornoch Firth and Sutherlandshire, E. by the Moray Firth, S. by

Inverness-shire, and W. by the Atlantic. It comprehends 2,003,065 acres, of which only about 220,280 acres are included in Cromarty. Its length from east to west is 67 miles, and from north to south 58 miles. The area of the islands is 437,221 acres. Ross includes the northern part of Lewis (see vol. xiv. p. 492), and other ten islands of the Hebrides, of which eight only were inhabited in 1881 (nine in 1871). The outline of Ross and Cromarty is very irregular, and both east and west coasts are much indented by bays and inland lochs, but except in the more inland recesses of these inlets the coast scenery is comparatively tame and uninteresting. The Moray Firth, an extension of Loch Beauly, separates the county from Nairn; the northern shore of the peninsula of the Black Isle is washed by Cromarty Firth, including the Bay of Nigg and extending from Dingwall to the headlands known as the Sutors of Cromarty; and the extreme northern coast is bounded by the Dornoch Firth, an extension of the river Oykel. On the west coast the inlets are for the most part long, narrow, and irregular, the principal being Loch Broom, Little Loch Broom, Lochs Gruinard, Ewe, Torridon, Carron, and Alsh.

Surface and Geology.—In the north-west of Ross the Archæan series of rocks, consisting of gneisses, schists, and other crystalline rocks, are well developed. Above them rest unconformably red conglomerates and sandstones of Cambrian age, rising into the picturesque mountains which form such a striking feature of the scenery of western Ross. Farther east they are overlaid unconformably by the quartzites and limestones belonging to the Lower Silurian division. Over these, by enormous terrestrial displacement, the Archæan and Cambrian rocks have been pushed, sometimes for a horizontal distance of ten miles. New crystalline structures have been superinduced upon all the rocks affected by these movements, and the resulting crystalline schists may consist of what originally were Archæan, Cambrian, or Silurian rocks of ordinary types. In their present condition, however, these eastern schists are certainly later than the older part of the Silurian system. They cover by far the larger part of the two counties. Along the east coast they are unconformably covered by the Old Red Sandstone formation. Rocks of Jurassic (Oolitic) age fringe the eastern shores. In the Black Isle peninsula they include a thin coal seam. Near the Sutors of Cromarty they abound in ammonites, belemnites, and other shells, and in the remains of various woods and ferns. Ironstone, chiefly in the form of bog iron ore, is found in considerable quantities. Of the various mineral springs the best known is that of Strathpeffer, characterized chiefly by sulphuretted hydrogen gas and various salts. The surface consists principally of lofty mountain groups, intersected by comparatively narrow valleys, occupied partly by lakes and rivers; but in the east there is a considerable extent of comparatively level ground. A large number of the mountains are over 3000 feet in height, the highest summits being Carn Eige (3877 feet) and Mam Soul (3862) on the borders of Inverness, while An Riabhachan, wholly within Ross, has a height of 3696 feet, and Sgurr Mor of 3657 feet. Ben Wyvis, remarkable for its immense isolated bulk, has a height of 3429 feet, and another well-known mountain, Ben Attow, attains 3383 feet. A mere fraction of the western district of Ross is under 1000 feet in height. The principal rivers are the Oykel, which, rising in Sutherland, forms for about 20 miles the boundary with Ross, from which near its mouth it receives the Carron; the Conan, falling into Cromarty Firth; and the Carron, flowing south-west into Loch Carron. Besides Loch Maree (area 7090 acres), which is dominated by the imposing mass of Ben Slioch (3217 feet) on the north, the principal freshwater lakes are Lochs Fannich, Fuir, Luichart, and Glass; but in addition to these there are over a dozen of considerable size, besides a large number of smaller ones.

Soil and Agriculture.—The most fertile part of the counties is the eastern district, especially that included in the peninsulas of the Black Isle and Easter Ross, the soil varying from a light sandy gravel to a rich deep loam. In this district agriculture is quite as advanced as in any other part of Scotland. In the valleys and along the shores of the western coast there are many patches of good soil, but, partly on account of the excessive rainfall, tillage is not prosecuted with the same enterprise as in the eastern districts. On the higher grounds there is a large extent of good pasturage for sheep. According to the agricultural statistics for 1885 the total area in Ross and Cromarty under crops, bare fallow, and grass was 134,399 acres, of which 47,639 acres were under grain crops, 26,496 under green crops, 40,819 rotation grasses, 19,075 permanent pasture, and 370 fallow. The area under wheat has

been gradually diminishing, being 9715 acres in 1857 and only 1185 in 1885, while that under barley on the other hand has increased from 6435 acres to 13,681, and that under oats from 16,256 to 31,685. The area under potatoes has also doubled, in the earlier year being only 4471, while in 1885 it was 8982. The area under turnips has increased from 12,228 to 16,557 and that under rotation grasses from 20,869 to 40,819. Horses, principally half-breeds between the old "garrons" and Clydesdales, numbered 7365 in 1885, of which 5874 were used solely for purposes of agriculture; cattle numbered 42,976, of which 17,811 were cows and heifers in milk or in calf, and 17,561 under two years old. They are principally the native Highland breed or crosses. Sheep in 1885 numbered 309,590, of which 218,522 were one year old and above. Besides black-faced, crosses with Leicesters and crosses between Leicesters and Cheviots are not uncommon. There is still in Ross and Cromarty a considerable extent of native woodland, the trees being principally firs, oaks, ash, and alder. The area under woods in 1881 was 43,201 acres. The red and roe deer have free scope on the extensive mountain regions, the area under deer forests being 719,305 acres. Foxes, badgers, wild cats, alpine hares, and other wild animals abound. The usual varieties of winged game are plentiful. The golden eagle and osprey are both common, as well as many other birds of prey. Waterfowl of all kinds abound in the extensive sea lochs, and the rivers and inland lochs are specially abundant in trout and salmon. The pearl mussel is found in the bed of the river Conan.

According to the latest Landowners' Return, 2043 proprietors possessed 1,971,682 acres in the county of Ross, of a gross annual value of £269,342. The owners of less than one acre numbered 1719. The following owned more than 100,000 acres:—Sir James Matheson, 406,070; Alex. Matheson, 220,433; Sir Kenneth S. Mackenzie, 164,680; the duchess of Sutherland, 149,879; and Sir C. W. A. Ross, 110,445. For Cromarty separately the Return gives 231 owners, possessing 18,206 acres, of £11,966 annual value.

Manufactures and Trade.—With the exception of distillation, there are no important manufactures within the counties, although home-made woollen cloth is woven in the country districts. The counties depend chiefly on their agriculture and their fishing, which within recent years has greatly developed through improved means of communication with the south. Stornoway and the west coast have regular communication by steamers with Glasgow, and on the east coast a steamer leaves Cromarty and Invergordon for Aberdeen and Leith once a week. Fish, cattle, and sheep are the principal exports. The Highland Railway skirts the Firth of Cromarty by Dingwall and Tain to Bonar Bridge, a branch passing from Dingwall south-westwards to Stromeferry, whence there is communication with Skye by steamer. Salmon fishing is extensively carried on in the bays and mouths of the rivers, and the deep-sea fishings for herring, and for cod and other large fish, are among the most important in Scotland. They include the districts of Cromarty on the east coast, of Stornoway in Lewis, of Loch Broom and part of Loch Carron on the west coast, the remainder of the Loch Carron district being in Inverness-shire. The Broad Bay of Stornoway is famed for its flounders.

Administration and Population.—The two counties of Ross and Cromarty form one sheriffdom, and return one member to parliament. The burghs of Cromarty, Dingwall, Fortrose, and Tain are included in the Wick district of burghs, which returns one member. From 56,818 in 1801 the population of Ross and Cromarty had increased in 1841 to 78,685, and in 1871 to 80,955; in 1881 it was 78,547 (37,027 males and 41,520 females), of whom 56,086 were Gaelic-speaking. It is the fourth most thinly populated county in Scotland, the number of persons to the square mile being 25. The island population amounted to 23,960, of whom 23,149 were in Lewis. The town and village population amounted to 23,665, and the rural to 49,882. The police burghs are Cromarty (population 1352), Dingwall, which is also a royal burgh (1921), Fortrose (869), Invergordon (1092), Stornoway (2627), and Tain (1742). There are thirty-one entire parishes, and parts of two others.

History and Antiquities.—Ross proper, possessed by the Rosses, originally only included the district adjoining the Dornoch and Moray Firths. The first who bore the title of earl of Ross was Malcolm Macbeth, upon whom it was bestowed by Malcolm IV. After his rebellion in 1179 there was a period of chronic insurrection. By Alexander II. the earldom was bestowed on Fearchar Mac an t-Sagairt (the son of the priest), who being abbot of Applecross had already possession of the western district. William, fourth earl, was present with his clan at the battle of Bannockburn. The earldom reverted to the crown in 1424, and James I. restored it to the heiress of the line, the mother of Alexander, Lord of the Isles (see HEBRIDES, vol. xi. 607). The lands of the earldom were in 1481 conferred on Prince James, second son of James III., who in 1478 had been created duke of Ross. Ross was constituted a county in 1661, but the sheriffdom of Cromarty is of more ancient date. At Invercarron Montrose was totally defeated by Colonel Strachan, 27th April 1650; and at Glenshiel, 11th June 1718, General Wightman defeated the Jacobites. So-called Druidical circles and cairns are very common. Among ancient sculptured stones may be men-

tioned the three according to tradition marking the burial-places of the three sons of a Danish king. The largest, at Shandwick, *Olach-a-charridh*, or the "Stone of Lamentation," was blown down in a storm in 1847 and broken into three pieces; a smaller one at Nigg churchyard, struck down by the fall of the belfry in 1725, has been re-erected and fenced round; and the third, which formerly stood at Cadboll of Hilltown has been removed for preservation to the grounds of Invergordon Castle. An ancient vitrified fort, 420 feet by 120, crowns the hill of Knockfarrel in Fodderty parish. Among old castles are those of Lochslin, in the parish of Fearn, said to date from the 13th century, which, though very ruinous, still possesses two square towers in good preservation; Balone, in the parish of Tarbat, said to have been built by the earls of Ross; and the remains of Dingwall Castle, the earls of Ross's original seat. Of the abbey of Fearn, transferred from Edderton in 1338, and interesting as having had for its tenth abbot the Reformer Patrick Hamilton, the abbey church, much altered, is still used as the parish church. There are a very large number of fine modern mansions.

ROSS, SIR JAMES CLARK (1800–1862), arctic voyager, was born in London 15th April 1800. He entered the navy in 1812 under his uncle Sir John Ross (see below), whom he accompanied in his first voyage in search of a north-west passage. From 1819 to 1825, and again in 1827, he was engaged with Captain Parry in his voyages. He served under his uncle from 1829 to 1833, discovering the position of the north magnetic pole on 1st June 1831 (see POLAR REGIONS, vol. xix. p. 320). He commanded the expedition in the "Erebus" and "Terror" to the Antarctic seas from 1839 to 1843, and after his return he received in 1844 the honour of knighthood. In 1847 he published *A Narrative of a Voyage in the Antarctic Regions*, 2 vols. His last expedition was in 1848 in the "Enterprise" to Baffin's Bay in search of Sir John Franklin. He died at Aylesbury, 3d April 1862.

ROSS, SIR JOHN (1777–1856), arctic voyager, was the fourth son of the Rev. Andrew Ross, minister of Inch, Wigtownshire, where he was born in 1777. He entered the navy in 1786. In 1818 he sailed in command of an Arctic expedition (see POLAR REGIONS, vol. xix. p. 319), an account of which he published, under the title *Voyage of Discovery for the Purpose of Exploring Baffin's Bay*, in 1819. In 1829, through the munificence of his friend Sir Felix Booth, he was able to undertake a second expedition (see vol. xix. p. 320). Shortly after his return in 1833 he was knighted, made C.B., and elected a member of many learned societies. In accordance with a promise made to Sir John Franklin, he undertook a third expedition in 1850 and remained one winter on the ice, but accomplished nothing. His own account of the causes of his failure is given in a pamphlet published in 1855. He died 31st August 1856.

Ross also wrote *A Treatise on Navigation by Steam*, 1828; *Memoirs and Correspondence of Admiral Lord De Saumarez*, 1838; *Arctic Expedition*, 1850; and several other minor works.

ROSSANO, a city of Italy, in the province of Cosenza, most picturesquely situated on a precipitous spur of the great mountain mass of Sila (geologically the oldest part of Italy) overlooking the Gulf of Taranto. The railway station, 93 miles from Taranto, is about an hour from the town. Rossano is the seat of an archbishop and the centre of a circondario; marble and alabaster quarries are worked in the neighbourhood; and the inhabitants numbered 14,688 in 1881 (17,979 in the commune). In the cathedral is preserved the *Codex Rossanensis*, an uncial MS. of the Gospels of Matthew and Mark (6th century) in silver characters on purple vellum, with twelve miniatures, of great interest in the history of Byzantine art.

Mentioned in the Itineraries, Rossano (*Rosclanum*) appears under the Latin empire as one of the important fortresses of Calabria. Totila took it in 548. The people showed great attachment to the Byzantine empire, and the Greek rite was maintained in the cathedral till the time of the Angevins. In the 14th century Rossano was made a principality for the great family of De Baux. Passing to the Sforza, and thus to Sigismund of Poland, it was ultimately in 1558 united to the crown of Naples by Philip II. of Spain in virtue of a doubtful will by Bona of Poland in

favour of Giovanni Lorenzo Pappacoda. Under Isabella of Aragon and Bona of Poland the town had been a centre of literary culture; but under the Spaniards it rapidly declined even in the matter of population (2256 households in 1561, 1177 in 1669). The crown sold the lordship in 1612 to the Aldobrandini, and from them it passed to the Borghesi and the Caraffa. Rossano is best known as the birthplace of St Nilus the younger, whose life is the most valuable source of information extant in regard to the state of matters in southern Italy in the 10th century. Pope John VII. (705–707) was also a native of the town.

See Lenormant, *La Grande Grèce*, vol. I.

ROSSE, WILLIAM PARSONS, THIRD EARL OF (1800–1867), the distinguished constructor of reflecting telescopes, was born at York on June 17, 1800, a son of the second earl, who as Sir Lawrence Parsons, Bart., had been a prominent member of the Irish Parliament. Until his father's death (1841) he was known as Lord Oxmantown. He was M.P. for King's County from 1821 to 1834, Irish representative peer from 1845, president of the Royal Society from 1848 to 1854, and chancellor of the university of Dublin from 1862. From 1827 he devoted himself to the improvement of reflecting telescopes; in 1839 he mounted a telescope of 3 feet aperture at his seat, Birr Castle, Parsonstown; and in 1845 his celebrated 6-foot reflector was finished. Owing to the famine and the disturbed state of the country, which demanded his attention as a large landowner and lieutenant of King's County, the instrument remained unused for nearly three years, but since 1848 it has been in constant use, chiefly for observations of nebulae, for which it was particularly suited on account of its immense optical power. Lord Rosse died on October 31, 1867.

The first constructor of reflecting telescopes on a large scale, William Herschel, never published anything about his methods of casting and polishing specula, and he does not appear to have been very successful beyond specula of 18 inches diameter, his 4-foot speculum ("the 40-foot telescope") having been very little used by him (about this question see an interesting discussion between Sir J. Herschel and Robinson in *The Athenæum*, Nos. 831–36, 1843, which deserves to be rescued from oblivion). Lord Rosse had therefore no help whatever in working his way from a small beginning to the brilliant results he achieved. His speculum metal is composed of four equivalents of copper and one of tin, a very brilliant alloy, which resists tarnish better than any other compound tried. Chiefly owing to the extreme brittleness of this material, Lord Rosse's first larger specula were composed of a number of thin plates of speculum metal (sixteen for a 3-foot mirror) soldered on the back of a strong but light framework made of a peculiar kind of brass (2.75 of copper to 1 of zinc), which has the same expansion as his speculum metal. In Brewster's *Edinburgh Journal of Science* for 1828 he described his machine for polishing the speculum, which in all essential points remained unaltered afterwards. It imitates the motions made in polishing a speculum by hand by giving both a rectilinear and a lateral motion to the polisher, while the speculum revolves slowly; by shifting two eccentric pins the course of the polisher can be varied at will from a straight line to an ellipse of very small eccentricity, and a true parabolic figure can thus be obtained. The speculum lies face upwards in a shallow bath of water (to preserve a uniform temperature), and the polisher fits loosely in a ring, so that the rotation of the speculum makes it revolve also, but more slowly. Both the grinding and polishing tools are grooved, to obtain a uniform distribution of the emery used in the grinding process and of the rouge employed in polishing, as also to provide for the lateral expansion of the pitch with which the polisher is coated. In September 1839 a 3-foot speculum was finished and mounted on an altazimuth stand similar to Herschel's; but, though the definition of the images was good (except that the diffraction at the joints of the speculum caused minute rays in the case of a very bright star), and its peculiar skeleton form allowed the speculum to follow atmospheric changes of temperature very quickly, Lord Rosse decided to cast a solid 3-foot speculum. Hitherto it had been felt as a great difficulty in casting specula that the solidification did not begin at one surface and proceed gradually to the other, the common sand mould allowing the edges to cool first, so that the central parts were subject to great straining when their time of cooling came, and in large castings this generally caused cracking. By forming the bottom of the mould of hoop iron placed on edge and closely packed, and the sides of sand, while the top was left open, Lord Rosse overcame this difficulty, and the hoop-iron had the further advantage of allowing the gas developed during the cooling to escape, thus preventing the speculum from being full of

pores and cavities. This happy invention secured the success of the casting of a solid 3-foot speculum in 1840, and encouraged Lord Rosse to make a speculum of 6 feet diameter, which he also succeeded in doing in 1842. In the beginning of 1845 this great reflector (which up to the present time has remained without a rival) was mounted and ready for work. The instrument has a focal length of 54 feet and the tube is about 7 feet in diameter; owing to these large dimensions it cannot be pointed to every part of the heavens, but can only be moved a short distance from the meridian and very little to the north of the zenith; these restrictions have, however, hardly been felt, as there is almost at any moment a sufficient number of objects within its reach. From 1848 to 1878 it was with but few interruptions employed for observations of nebulae; and many previously unknown features in these objects were revealed by it, especially the remarkable spiral configuration prevailing in many of the brighter nebulae. A special study was made of the nebula of Orion, and the resulting large drawing gives an extremely good representation of this complicated object. Since 1845 others have followed in Lord Rosse's footsteps and several 3- and 4-foot mirrors have been made, while the development of refracting telescopes has been so rapid that, whereas twenty-five years ago there were no object glasses larger than 15 inches in existence, a 30-inch glass has now actually been completed. But, though the refractors surpass the large reflectors in general convenience of use and are very much better adapted to work of precision (micrometer measures), Lord Rosse's great reflector is still unapproached in light-grasping power, and remains a noble monument of its maker, who (as beautifully expressed on a memorial tablet in the parish church of Birr) "revealed to mankind by the unrivalled creation of his genius a wider vision of the glory of God."

Lord Rosse gave a detailed account of the experiments which step by step had led to the construction of the 3-foot speculum in the *Philosophical Transactions* for 1840. In the same publication for 1844 and 1850 he communicated short descriptions and drawings of some of the more interesting nebulae, and in the volume for 1861 he published a paper *On the Construction of Specula of 6 feet aperture, and a Selection from the Observations of Nebulae made with them*, with numerous engravings. The accounts of the observations given in these papers were, however, of a very fragmentary character; but in 1879-80 a complete account of them was published by the present earl ("Observations of nebulae and clusters of stars made with the 6-foot and 3-foot reflectors at Birr Castle from 1848 to 1878") in the *Scient. Trans. R. Dublin Soc.*, vol. ii. The drawing of the nebula of Orion was published in the *Phil. Trans.* for 1868.

ROSSELLI, COSIMO (1439-*c.* 1507), a Florentine painter, was born in 1439. At the age of fourteen he became a pupil of Neri di Bicci, and in 1460 he worked as assistant to his cousin Bernardo di Stefano Rosselli. The first work of Cosimo mentioned by Vasari still exists in S. Ambrogio, in Florence, over the third altar on the left. It is an Assumption of the Virgin, a youthful and feeble work of but little merit. In the same church, on the wall of one of the chapels, is a fresco by Cosimo which Vasari praises highly, especially for a portrait of the young scholar Pico di Mirandola. The scene, a procession bearing a miracle-working chalice, is painted with much vigour and less mannerism than most of this artist's work. A picture painted by Rosselli for the church of the Annunziata, with figures of SS. Barbara, Matthew, and the Baptist, is now in the Academy of Florence. Rosselli also spent some time in Lucca, where he painted several altarpieces for various churches, none of any great importance. A picture attributed to him, taken from the church of S. Girolamo at Fiesole, is now in the National Gallery of London. It is a large retable, with, in the centre, St Jerome in the wilderness kneeling before a crucifix, and at the sides standing figures of St Damasus and St Eusebius, St Paolo and St Eustachia; below is a predella with small subjects. Though dry and hard in treatment, the figures are designed with much dignity. The Berlin Gallery possesses three pictures by Rosselli, the Virgin in Glory, the Entombment of Christ, and the Massacre of the Innocents. In 1480 Rosselli, together with the chief painters of Florence, was invited by Sixtus IV. to Rome to assist in the painting of the frescos in the Sistine Chapel. Three of these were executed by him—the Destruction of Pharaoh's Army in the Red Sea, Christ Preaching by the Lake of Tiberias, and the Last Supper. The last of these is still well preserved, but is a very mediocre work. Vasari's story about the pope admiring his paintings more than those of his abler brother painters

has probably but little foundation. Rosselli's Sistine frescos were partly painted by his assistant Piero di Cosimo, who was so called after Cosimo Rosselli. His chief pupil was Fra Bartolommeo. According to Vasari, Rosselli died in 1484, but this is evidently a mistake, as his will still exists dated November 25, 1506 (see Gaye, *Car. ined.*, ii. 457, note).

For an account of Rosselli's Sistine frescos, see Platner and Bunsen, *Beschreibung der Stadt Rom*, ii. pt. i.; and Rumohr, *Italian. Forschungen*, ii. 265.

ROSSELLINO, ANTONIO (1427-*c.* 1479), one of the most skilful of Florentine sculptors, was the son of Matteo di Domenico Gamberelli, and had four brothers, who all practised some branch of the fine arts. Almost nothing is known about the life of Antonio, but many of his works

Marble Relief by Antonio Rossellino.

still exist, and are of the highest beauty, full of strong religious sentiment, and executed with the utmost delicacy of touch and technical skill. The style of Antonio and his brother (see below) is a development of that of Donatello and Ghiberti; it possesses all the refinement and soft sweetness of the earlier masters, but is not equal to them either in vigour or originality. Antonio's chief work, still in perfect preservation, is the very lovely tomb of a young cardinal prince of Portugal, who died in 1459, aged only twenty-six. It occupies one side of a small chapel on the north of the nave of San Miniato.¹ The recumbent effigy of the cardinal is very remarkable for the grace of its pose and the beauty of the portrait face. It rests on a handsome sarcophagus, and over it, under the arch which frames the whole, is a beautiful relief of the Madonna between two flying angels. The tomb was begun in 1461 and finished in 1466; Antonio received four hundred and twenty-five gold florins for it. A reproduction of this tomb with slight alterations, and of course a different effigy, was made by Antonio for the wife of Antonio Piccolomini, duke of Amalfi, in the church of S. Maria del Monte at Naples, where it still exists. For the same church he also executed some delicate reliefs, which perhaps err in being too pictorial in style, especially in the treatment of the backgrounds. A fine medallion relief by him is preserved in the Bargello at Florence (see fig.), and the original terra cotta model for this is in the possession of Mr Drury Fortnum; in some small matters of

¹ Illustrated by Gonnelli, *Mon. Sepol. della Toscana*, Florence, 1819, plate xxiii.

detail the original terra cotta is superior to the finished marble, especially in the treatment of the infant Christ.

ROSSELLINO, BERNARDO (1409–1464), was no less able as a sculptor than his younger brother (see above), and was also a very distinguished architect. His finest piece of sculpture is the tomb, in the Florentine Santa Croce, of Leonardo Bruni of Arezzo, the historian of Florence; the recumbent effigy is a work of great merit. The inner cathedral pulpit at Prato, circular in form on a tall slender stem, was partly the work of Mino da Fiesole and partly by Bernardo Rossellino. The latter executed the very minute reliefs of St Stephen and the Assumption of the Virgin. For his part in the work he received sixty-six gold florins. The South Kensington Museum possesses a relief by Bernardo, signed and dated (1456). It is a fine portrait of the physician Giovanni da S. Miniato.¹ Bernardo's works as an architect were very numerous and important, and he was also very skilful as a military engineer. He restored the church of S. Francis at Assisi, and designed several fine buildings at Civita Vecchia, Orvieto, and elsewhere. He also built fortresses and city walls at Spoleto, Orvieto, and Civita Castellana. He was largely employed by Nicholas V. and Pius II. for restorations in nearly all the great basilicas of Rome, but at present little trace of his work remains, owing to the sweeping alterations which were made during the tasteless 17th and 18th centuries. Between the years 1461 and 1464 (the date of his death) he occupied the important post of *capo-maestro* to the Florentine duomo. A number of buildings at Pienza, executed for Pius II., are attributed to him; the Vatican registers mention the architect of these as M^o Bernardo di Fiorenza, but this indication is too slight to make it certain that the elder Rossellino is referred to (see Vasari, ed. Milanese, iii. 93 sq.).

ROSSETTI, DANTE GABRIEL (1828–1882), poet and painter, whose full baptismal name was Gabriel Charles Dante, was born May 12, 1828, at 38 Charlotte Street, Portland Place, London. He was the first of the two sons and the second of the four children of Gabriele Rossetti, the Italian poet and patriot, whose career was at one period as turbulent as that of his illustrious son was (as far as mere outward incidents went) uneventful.

About 1824 Gabriele Rossetti, the father, after many vicissitudes, reached England, where he married in 1826 Frances Polidori, sister of Byron's Dr Polidori and daughter of a Tuscan who had in early youth been Alfieri's secretary and who had married an English lady. From his mother the subject of this notice inherited as many English traits as Italian, or indeed more. In 1831 Gabriele became professor of Italian in King's College, London, and afterwards achieved a recognized position as a subtle and original, if eccentric, commentator on Dante.

Dante Rossetti's education was begun at a private school in Foley Street, Portland Place, where he remained, however, only nine months, from the autumn of 1835 to the summer of 1836. He next went (in the autumn of 1836) to King's College School, where he remained till the summer of 1843, having reached the fourth class. From early childhood he had displayed a marked propensity for drawing and painting. It had therefore from the first been tacitly assumed that his future career would be an artistic one, and he left school early. In Latin, however, he was already fairly proficient for his age; French he knew well; Italian he had spoken from childhood, and he had some German lessons about 1844–45. But, although he learned enough German to be able to translate the *Arme Heinrich* of Hartmann von

Aue, and some portions of the *Nibelungenlied*, he afterwards forgot the language almost entirely. His Greek too, such as it had been, he lost. On leaving school he went to Cary's Art Academy (previously called Sass's), near Bedford Square, and thence obtained admission to the Royal Academy Antique School towards 1846. He did not attend the Royal Academy Life School, and no doubt his defective knowledge of anatomy was some obstacle to him in after life. The truth is, however, that Rossetti's occasionally defective drawing (which, as regards the throat, is most striking) did not arise mainly from ignorance; it was the result of a peculiar mannerism. Admiring long and slender necks, and drawing them admirably in such masterpieces as Beata Beatrix and Monna Vanna, he refused to see that in art as in ethics the point of virtue lies midway between two opposite vices. Admiring large hands and massive arms in a woman, and drawing them admirably in such designs as Proserpine, Reverie, &c., he refused to see that hands can be too large, arms too massive. As a colourist, however, Rossetti may be said to have required no teaching. Mastery over colour seemed to have come to him by instinct.

Of the artistic education of foreign travel Rossetti had very little. But in early life he made a short tour in Belgium, where he was indubitably much impressed and influenced by the works of Van Eyck at Ghent and Memling at Bruges. In the spring of 1848 he took an active part in forming the so-called pre-Raphaelite brotherhood, the members of which believed that the time had come for the artist to confront again Nature herself—imitating no longer man's imitations of her—even though the imitations be those splendid works of the great Raphaelite or post-Raphaelite masters which had hitherto been the inspiration of modern art. The revolution was to be one of motives no less than of methods. Of motive Rossetti was from the first a master. His struggle with methods we have already indicated.

To "paint nature as it is around them, with the help of modern science," was the object of the pre-Raphaelites according to Mr Ruskin, but to do so artists require something more than that "earnestness of the men of the 13th and 14th centuries" which Mr Ruskin speaks of: they require knowledge. Without knowledge, as we see in even such a marvellous design as Christ at the Door of Simon the Pharisee (1859), the artistic camel has to be drawn from the artist's inner consciousness, and the result is rarely a satisfactory quadruped. Intensity of seeing does not necessarily imply truth of seeing; otherwise what phenomenon can be more real than Blake's Ghost of a Flea?

But Rossetti's genius absorbed from pre-Raphaelitism all that it had to give, and then passed on its way towards its own special goal. Often and indeed mostly an artist's true and best education is unlearning rather than learning. It was so in Rossetti's case, though he had the most vivid personality and the rarest imagination of any man of his time. Plastic as molten wax, the mind from the dawn of consciousness begins learning, for good or ill. Youth, therefore, how rich soever in individual force, can no more help being imitative than a river, even though it be the Amazon itself, can help reflecting the scenery through which it flows. The goal before the young Rossetti's eyes (as we see in such designs as Taurello's First Sight of Fortune, 1848, and Cassandra) was to reach through art the forgotten world of old romance—that world of wonder and mystery and spiritual beauty which the old masters knew and could have painted had not lack of science, combined with slavery to monkish traditions of asceticism, crippled their strength. And he reached it—he reached early that world which not all the pseudo-classicism that arose in the 15th century, ripened in the 16th, and rotted

¹ See Perkins, *Italian Sculptors*, 1864, i. p. 207; also *Id.*, *Tuscan Sculptors*, p. 202, and *Historical Handbook of Italian Sculpture*, 1883, p. 121.

in the 18th could banish from the dreams of man, as we see in even such juvenile work as the pen and ink drawings of Gretchen in the Chapel, and Genevieve. In that great rebellion against the renaissance of classicism which (after working much good and much harm) resulted in 18th-century materialism,—in that great movement of man's soul which may be appropriately named "the Renaissance of the Spirit of Wonder in Poetry and Art"—he became the acknowledged protagonist before ever the pre-Raphaelite brotherhood was founded and down to his last breath at Birchington.

And it was by inevitable instinct that Rossetti turned to that mysterious side of nature and man's life which to other painters of his time had been a mere fancy-land, to be visited, if at all, on the wings of sport. It is not only in such masterpieces of his maturity as Dante's Dream, La Pia, &c., but in such early designs as How they Met Themselves, La Belle Dame Sans Merci, Cassandra, &c., that Rossetti shows how important a figure he is in the history of modern art, if modern art claims to be anything more than a mechanical imitation of the facts of nature.

For if there is any permanent vitality in the Renaissance of Wonder in modern Europe—if it is not a mere passing mood—if it is really the inevitable expression of the soul of man in a certain stage of civilization (when the sanctions which have made and moulded society are found to be not absolute and eternal, but relative, mundane, ephemeral, and subject to the higher sanctions of unseen powers that work behind "the shows of things"), then perhaps one of the first questions to ask in regard to any imaginative painter of the 19th century is, In what relation does he stand to the newly awakened spirit of romance? Had he a genuine and independent sympathy with that temper of wonder and mystery which all over Europe had preceded and now followed the temper of imitation, prosaic acceptance, pseudo-classicism, and domestic materialism? or was his apparent sympathy with the temper of wonder, reverence, and awe the result of artistic environment dictated to him by other and more powerful and original souls around him?

We do not say that the mere fact of a painter's or a poet's showing but an imperfect sympathy with the Renaissance of Wonder is sufficient to place him below a poet in whom that sympathy is more nearly complete, because we should then be driven to place some of the disciples of Rossetti above our great realistic painters, and we should be driven to place a poet like the author of *The Excursion* and *The Prelude* beneath a poet like the author of *The Queen's Wake*; but we do say that, other things being equal or anything like equal, a painter or poet of our time is to be judged very much by his sympathy with that great movement which we call the Renaissance of Wonder—call it so because the word romanticism never did express it even before it had been vulgarized by French poets, dramatists, doctrinaires, and literary harlequins. To struggle against the prim traditions of the 18th century, the unities of Aristotle, the delineation of types instead of characters, as Chateaubriand, Madame de Staël, Balzac, and Hugo struggled, was well. But in studying Rossetti's works we reach the very key of those "high palaces of romance" which the English mind had never, even in the 18th century, wholly forgotten, but whose mystic gates no Frenchman ever yet unlocked. Not all the romantic feeling to be found in all the French romanticists (with their theory that not earnestness but the grotesque is the life-blood of romance) could equal the romantic spirit expressed in a single picture or drawing of Rossetti's, such, for instance, as Beata Beatrix or Pandora. For, while the French romanticists—inspired by the theories (drawn from English exemplars) of Novalis,

Tieck, and Herder—cleverly simulated the old romantic feeling, the "beautifully devotional feeling" which Holman Hunt speaks of, Rossetti was steeped in it: he was so full of the old frank childlike wonder and awe which preceded the great renaissance of materialism that he might have lived and worked amidst the old masters. Hence, in point of design, so original is he that to match such ideas as are expressed in Lilith, Hesterna Rosa, Michael Scott's Wooing, the Sea Spell, &c., we have to turn to the sister art of poetry, where only we can find an equally powerful artistic representation of the idea at the core of the old romanticism—the idea of the evil forces of nature assailing man through his sense of beauty. We must turn, we say, not to art—not even to the old masters themselves—but to the most perfect efflorescence of the poetry of wonder and mystery—to such ballads as the "Demon Lover," to Coleridge's "Christabel" and "Kubla Khan," to Keats's "La Belle Dame sans Merci," for parallels to Rossetti's most characteristic designs. Now, although the idea at the heart of the highest romantic poetry (allied perhaps to that apprehension of the warring of man's soul with the appetites of the flesh which is the basis of the Christian idea) may not belong exclusively to what we call the romantic temper (the Greeks, and also most Asiatic peoples, were more or less familiar with it, as we see in the *Salāmān and Absul* of Jami), yet it became peculiarly a romantic note, as is seen from the fact that in the old masters it resulted in that asceticism which is its logical expression and which was once an inseparable incident of all romantic art. But, in order to express this stupendous idea as fully as the poets have expressed it, how is it possible to adopt the asceticism of the old masters? This is the question that Rossetti asked himself, and answered by his own progress in art. Not that it is possible here to give a chronological catalogue of Rossetti's pictures. Moreover this has been already done in great measure by Mr William Sharp, Mr W. M. Rossetti, and others. We shall only dwell upon a few of those which most strongly indicate the course his genius took.

In all of them, however, the poorest and the best, is displayed that power which Blake calls vision—the power which, as he finely says, is "surrounded by the daughters of inspiration," the power, that is, of seeing imaginary objects and dramatic actions—physically seeing them as well as mentally—and flashing them upon the imaginations (even upon the corporeal senses) of others.

It was as early as 1849 that Rossetti exhibited in the so-called Free Exhibition the *Girlhood of the Virgin*, one of the most beautiful and characteristic of all his works. He scarcely ever exhibited again in London, though just before his death his largest and most ambitious picture, *Dante's Dream*, was exhibited at Liverpool.

Then came, in 1850, *The Germ*, that short-lived magazine of four numbers upon which so much has of late been written. If *The Germ* was really "an official manifesto or apologia of pre-Raphaelitism," all that it had to preach was the noble doctrine of the sacredness, the saving grace, of conscience in art. In it appeared Rossetti's poem the "Blessed Damsel," the prose poem "Hand and Soul" (written as early as 1848), six sonnets, and four lyrics, but none of his designs, though two illustrations had been prepared and discarded on account of their unsatisfactory condition when reproduced. Like the other contributors to *The Germ* Rossetti had a belief that can only be called passionate in the value of subject in art. For some years his fecundity as a designer was called into astonishing activity, but not always in the field of wonder and poetic mystery. The artist who had had the strongest influence upon Rossetti's early tastes was Madox Brown, whose genius, dramatic and historic, has at length obtained

universal recognition through the magnificent frescos at Manchester. Though not one of the pre-Raphaelite brotherhood, he had been a contributor to *The Germ*. Rossetti was deeply impressed with the power and fecundity of design displayed by Mr Brown's cartoons exhibited in Westminster Hall, and when he himself began serious work as a painter he thought of Brown as the one man from whom he would willingly receive practical guidance, and wrote to him at random. He became Brown's pupil; but only once or twice, as in *Found* and *Dr Johnson at the Mitre*, did Rossetti try his hand at such realistic subjects as Brown loved, and then with a success that is very surprising if we consider how entirely his artistic energy had worked in very different lines. *Found*, begun in 1853, still remains unfinished. A countryman entering London in the early morning is accidentally or fatally encountered at the foot of the bridge by his rustic sweetheart, who, having gone to London, has been, in the most pathetic and terrible sense of the word, "lost." At sight of her lover the girl falls fainting at his feet. The expression of shame and horror on her still beautiful face as she cowers against the wall, and the expression of pity and grief on the man's as he clasps her hands and tries to raise her are unsurpassed and perhaps for sheer power unequalled in modern dramatic art.

Many circumstances—for instance, the beginning of such grand designs as *Magdalene at the Door of Simon the Pharisee*, "*Aspect of Medusa*," the *Boat of Love*, &c.,—interfered with the completion of *Found*. With the exception of the *Boat of Love*, Dante's *Dream* (1870) was perhaps Rossetti's most ambitious design in purely imaginative art. From the painting of this picture to his death Rossetti never satisfactorily completed a large and elaborate design—not because his faculty of invention was ever exhausted; in the very year of his death his brain was teeming with ideas as restlessly as when he designed *Found* and the *Boat of Love*. But the truth is that he wanted to write more poetry; and those wonderful half-lengths of women for which, late in life, he became so famous were not only beautiful and satisfying but comparatively easy of achievement; moreover purchasers were keen to commission them. Among those half-lengths, however, will be found some of his greatest works. Chief among them (if it is not *Proserpine*) is the marvellous crayon design *Pandora* in the possession of the present writer. In it is seen at its highest Rossetti's unique faculty of treating classical legend in the true romantic spirit. The grand and sombre beauty of *Pandora's* face, the mysterious haunting sadness in her deep blue-grey eyes as she tries in vain to reclose the fatal box from which are still escaping the smoke and flames that shape themselves as they curl over her head into shadowy spirit faces, grey with agony, between tortured wings of sullen fire, are in the highest romantic mood. And if the *Proserpine* does not equal this design in elaborate allegorical richness it has perhaps the still higher merit of suggesting lofty tragedy by the simplest means. By sheer force of facial expression, a woman clasping a pomegranate renders a tragic situation as fully as though the canvas had been crowded with figures.

But we must turn to his poetry. "*The Blessed Damozel*" was written so early as 1848. "*Sister Helen*" was produced in its original form in 1850 or 1851. The translations from the early Italian poets also began as far back as 1845 or 1846, and may have been mainly completed by 1849. Materials for the volume of original poetry (1870) accumulated slowly, and these having been somewhat widely read in manuscript had a very great influence upon our poetic literature long before their appearance in print; but this is not the place for criticising them in detail. All that we can here say is that in

poetry no less than in art what makes Rossetti so important a figure is the position he took up with regard to the Renaissance of Wonder—to that modern revival of what is called the "romantic" spirit, that spirit without which English poetry, as the present writer has on a former occasion said when discussing the romantic movement, can scarcely hold an original place at all when challenged in a court of universal criticism. The Renaissance of Wonder culminates in Rossetti's poetry as it culminates in his painting. The poet who should go beyond Rossetti would pass out of the realm of poetry into pure mysticism, as certain of his sonnets show. Fine as are these sonnets, it is in his romantic ballads that Rossetti (notwithstanding a certain ruggedness of movement) shows his greatest strength. In this opinion (which is not the general one) we agree with Dr Hueffer. "*Sister Helen*," "*The Blessed Damozel*," "*Staff and Scrip*," "*Eden Bower*," "*Troy Town*," "*Rose Mary*," as representing the modern revival of the true romantic spirit, take a place quite apart from the other poetry of our time.

By the modern revival of the romantic spirit in English poetry we mean something much more than the revival, at the close of the last century, of natural language, the change discussed by Wordsworth in his famous Preface, and by Coleridge in his comments thereon—that change of diction and of poetic methods which is commonly supposed to have arisen with Cowper, or, if not with Cowper, with Burns. The truth is that Wordsworth and Coleridge were too near the great changes in question, and they themselves took too active a part in those changes, to hold the historical view of what the changes really were. Important as was the change in poetic methods which they so admirably practised and discussed, important as was the revival of natural language, which then set in, it was not nearly so important as that other revival which had begun earlier and of which it was the outcome—the revival of the romantic spirit, the Renaissance of Wonder, even beneath the weight of 18th-century diction, the first movement of which no one has yet been able clearly and decisively to point out, but which is certainly English, and neither German nor French in its origin, and can be traced through Chatterton, Macpherson, and the Percy Ballads.

As a mere question of methods, a reaction against the poetic diction of Pope and his followers was inevitable. But, in discussing the romantic temper in relation to the overthrow of the bastard classicism and didactic materialism of the 18th century, we must, as we have just seen in discussing Rossetti's pictures, go deeper than mere artistic methods in poetry. When closely examined it is in method only that the poetry of Cowper is different from the ratiocinative and unromantic poetry of Dryden and Pope and their followers. Pope treated prose subjects in the ratiocinative—that is to say, the prose—temper, but in a highly artificial diction which people agreed to call poetic. Cowper treated prose subjects too—treated them in the same prose temper, but used natural language, a noble thing to do, no doubt—but this was only a part (and by no means the chief part) of the great work achieved by English poetry at the close of last century. That period, to be sure, freed us from the poetic diction of Pope; but it gave us something more precious still—it gave us entire freedom from the hard rhetorical materialism imported from France; it gave a new seeing to our eyes, which were opened once more to the mystery and the wonder of the universe and the romance of man's destiny; it revived in short the romantic spirit, but the romantic spirit enriched by all the clarity and sanity that the renaissance of classicism was able to lend.

The greatest movement that has occurred in later times was that which substituted for the didactic materialism of the 18th century the new romanticism of the 19th, the leaders of which movement, Coleridge and Scott, were admirably followed by Byron, Shelley, and Keats. Not that Wordsworth was a stranger to the romantic temper. The magnificent image of Time and Death under the yew tree is worthy of any romantic poet that ever lived, yet it cannot be said that he escaped save at moments from the comfortable 18th-century didactics, or that he was a spiritual writer in the sense that Coleridge, Blake, and Shelley were spiritual writers.

Of the true romantic feeling, the ever present apprehension of the spiritual world and of that struggle of the soul with earthly conditions which we have before spoken of, Rossetti's poetry is as full as his pictures—so full indeed that it was misunderstood by certain critics, who found in the most spiritualistic of poets and painters the founder of a "fleshly school." Although it cannot be said that "The Blessed Damozel" or "Sister Helen" or "Rose Mary" reaches to the height of the masterpieces of Coleridge, the purely romantic temper was with Rossetti a more permanent and even a more natural temper than with any other 19th-century poet, even including the author of "Christabel" himself. As to the other 19th-century poets, though the Ettrick Shepherd in *The Queen's Wake* shows plenty of the true feeling, Hogg's verbosity is too great to allow of really successful work in the field of romantic ballad, where concentrated energy is one of the first requisites. And even Dobell's "Keith of Ravelston" has hardly been fused in the fine atmosphere of fairy land. Byron's "footlight bogies" and Shelley's metaphysical abstractions had of course but very little to do with the inner core of romance, and we have only to consider Keats, to whose "La Belle Dame sans Merci" and "Eve of St Mark" Rossetti always acknowledged himself to be deeply indebted. In the famous close of the seventh stanza of the "Ode to a Nightingale"—

Charmed magic casements opening on the foam
Of perilous seas in faery lands forlorn—

there is of course the true thrill of the poetry of wonder, and it is expressed with a music, a startling magic, above the highest reaches of Rossetti's poetry. But, without the evidence of Keats's two late poems, "La Belle Dame sans Merci" and the "Eve of St Mark," who could have said that Keats showed more than a passing apprehension of that which is the basis of the romantic temper—the supernatural? In contrasting Keats with Rossetti it must always be remembered that Keats's power over the poetry of wonder came to him at one flash, and that it was not (as we have said elsewhere) "till late in his brief life that his bark was running full sail for the enchanted isle where the old ballad writers once sang and where now sate the wizard Coleridge alone." Though outside Coleridge's work there had been nothing in the poetry of wonder comparable with Keats's "La Belle Dame sans Merci," he had previously in "Lamia" entirely failed in rendering the romantic idea of beauty as a maleficent power. The reader, owing to the atmosphere surrounding the dramatic action being entirely classic, does not believe for a moment in the serpent woman. The classic accessories suggested by Burton's brief narrative hampered Keats where to Rossetti (as we see in "Pandora," "Cassandra," and "Troy Town") they would simply have given birth to romantic ideas. It is perhaps with Coleridge alone that Rossetti can be compared as a worker in the Renaissance of Wonder. Although his apparent lack of rhythmic spontaneity places him below the great master as a singer (for in these miracles of Coleridge's genius poetry ceases to appear as a fine art at all

—it is the inspired song of the changeling child "singing dancing to itself"), in permanence of the romantic feeling, in vitality of belief in the power of the unseen, Rossetti stands alone. Even the finest portions of his historical ballad "The King's Tragedy" are those which deal with the supernatural.

In the spring of 1860 Rossetti married Elizabeth Eleanor Siddall, who being very beautiful was constantly painted and drawn by him. She had one still-born child in 1861, and died in February 1862. Mrs Rossetti's own water-colour designs show an extraordinary genius for invention and a rare instinct for colour. He felt her death so acutely that in the first paroxysm of his grief he insisted upon his poems (then in manuscript) being buried with her. These were at a later period recovered, however, and from this time to his death he continued to write poems and produce pictures,—in the latter relying more and more upon his manipulative skill but exercising less and less,—for the reasons above mentioned,—his exhaustless faculty of invention.

About 1868 the curse of the artistic and poetic temperament, insomnia, attacked him. One of the most distressing effects of this malady is a nervous shrinking from personal contact with any save a few intimate and constantly seen friends. This peculiar kind of nervousness may be aggravated by the use of narcotics, and in his case was aggravated to a very painful degree; at one time he saw scarcely any one save his own family and immediate family connexions and the present writer. During the time that his second volume of original poetry, *Ballads and Sonnets*, was passing through the press (in 1881) his health began to give way, and he left London for Cumberland. A stay of a few weeks in the Vale of St John, however, did nothing to improve his health, and he returned much shattered. He then went to Birchington-on-Sea, but received no benefit from the change, and, gradually sinking from a complication of disorders, he died on Sunday the 9th April 1882.

In all matters of taste Rossetti's influence has been immense. The purely decorative arts he may be said to have rejuvenated directly or indirectly. And it is doubtful whether any other Victorian poet has left so deep an impression upon the poetic methods of his time.

One of the most wonderful of Rossetti's endowments, however, was neither of a literary nor an artistic kind: it was that of a rare and most winning personality which attracted towards itself, as if by an unconscious magnetism, the love of all his friends, the love, indeed, of all who knew him.

See T. Hall Caine, *Recollections of Dante Gabriel Rossetti*, 1882; and William Sharp, *Dante Gabriel Rossetti, a Record and a Study*, 1882. (T. W.)

ROSSINI, GIOACHINO ANTONIO (1792–1868), Italian dramatic composer, was born at Pesaro, February 29, 1792. He first studied music under Angelo Tesei, and that so successfully that he was able to sing solos in church when only ten years old, and three years later to appear at the opera house as Adolfo, in Paer's *Camilla*. He was next placed under a retired tenor, named Babbini, and on the breaking of his voice he entered the Liceo at Bologna for the purpose of studying counterpoint under Mattei. On his departure from the school, Mattei, who was not pleased with his progress, told him that he knew enough counterpoint to enable him to write in the free style, but that he was quite unfit for the composition of church music. "Do I know enough to write operas?" asked Rossini. "Quite enough," was the reply. "Then," said the boy, "I care to know no more." But in truth his wonderful instinct had taught him a great deal more than either he or Mattei suspected. Rossini's first opera, *La Cambiale di Matrei*

monio, was produced with success at the Teatro San Mosè at Venice in 1810. In 1811 he produced *L'Equivoco stravagante*, at Bologna; but his first real triumph was achieved at Venice in 1812, in *L'Inganno felice*, a work in which his genius unmistakably asserted itself. In the same year he produced *La Pietra del Paragone*, with equal applause, at Milan, besides four other operas in other places. These pieces were all successful, but *Tancredi*, written for the Teatro San Fenice at Venice, in 1813, produced a veritable *furor*. The name of the young *maestro* was now famous; yet, strange to say, his greatest comic opera was hissed on its first performance at Rome in 1816. This delightful inspiration, first entitled *Almaviva*, but now known as *Il Barbiere di Siviglia*, was founded on a libretto which Paisiello had already treated with success, and hence the refusal of the Roman audience to tolerate it. But the beauty of the music overcame the scruples of the most prejudiced listeners, and, by the time the *Barbiere* reached its third representation, Rossini was openly accepted as the greatest dramatic composer in Italy. Between 1815 and 1823 Rossini composed no less than twenty operas, including his masterpieces *Elisabetta* (1815), *Il Barbiere* (1816), *Otello* (1816), *La Cenerentola* (1817), *La Gazza Ladra* (1817), *Mosè in Egitto* (1818), *Le Donna del Lago* (1819), and *Semiramide* (1823), the last of which has lately been revived, with so great success, by Madame Adelina Patti.

Rossini visited England in 1823, and in 1824 accepted an engagement as musical director of the Théâtre Italien in Paris, where, in 1829, he produced his last great masterpiece, *Guillaume Tell*. After completing this beautiful work, he composed no more until 1832, when he wrote the first six movements of the *Stabat Mater* for private performance only. He completed this lovely composition in 1839, and it was first publicly performed at the Salle Ventadour in 1842. In 1855 he settled permanently in Paris, at 2 Rue Chaussée d'Antin, where he composed his last work, the *Petite Messe Solennelle*, which was first privately performed at the house of M. Pillet Will, March 16, 1864, and posthumously produced at the Théâtre Italien February 28, 1869. Rossini was twice married—to Isabella Colbran in 1821, and in 1847 to Olympe Pelissier. After his final return to Paris he spent a part of every year in a suburban villa in the Avenue Ingres, at Passy, and here he died of a very painful illness, November 13, 1868. He was buried at the church of the Trinité, November 21, with every possible honour. He was a foreign associate of the Institute, "grand officer of the Legion of Honour," the recipient of innumerable orders, and a member of innumerable musical institutions. Honour was justly lavished upon him; and, though his career was not free from temporary misfortunes, probably no man of genius ever lived a happier life, or enjoyed more fully the appreciation both of brother artists and the general public.

Rossini effected a complete revolution in the style of Italian opera. His accompaniments were richer than any that had ever been previously heard in Italy, and in their masterly instrumentation rivalled some of the most notable achievements of German art. His use of the crescendo and the "cabaletta," though sometimes carried to excess, gave a brilliancy to his music which added greatly to the excellence of its effect. He first accompanied his recitatives with the stringed orchestra in *Elisabetta*, and with stringed and wind instruments combined in *Otello*. And his overtures are by far the most masterly and complete compositions of the kind that the Italian school has ever produced.

ROSTOCK, the largest town of Mecklenburg-Schwerin, and one of the most important commercial cities on the Baltic, is situated on the left bank of the estuary of the Warnow, about eight miles from the sea. It lies 177 miles north-west of Berlin by railway, 80 miles north-east of Lübeck, and 106 miles south of Copenhagen. The city

consists of three parts—the old town to the east, and the middle and new towns to the west—of which the first retains some of the antique features of an old Hanse town, while the last two are for the most part regularly and even handsomely built. There are several fine squares in Rostock, among them the Blücher Platz, with a statue of Field-marshal Blücher, who was born in the town in 1742. Rostock was at one time a fortress of some strength, but the old fortifications have been razed, and their site is now occupied by a promenade. Within the last twenty years the suburbs have considerably extended themselves. Rostock has five old parochial churches:—St Mary's, dating from 1398–1472, one of the most imposing Gothic buildings in Mecklenburg; St Nicholas's, begun about 1250 and restored in 1450; St Peter's, with a lofty tower built in 1400, which serves as a landmark to ships 20 miles at sea; St James's, completed in 1588; and the church of the Holy Rood, begun in 1270, but now no longer used for service. St Mary's church contains a monument marking the original tomb of Grotius, who died in Rostock in 1645, though his remains were afterwards removed to Delft. Among the other interesting buildings are the curious 14th-century Gothic town-house, the façade of which is concealed by a Renaissance addition; the palace of the grand duke of Mecklenburg-Schwerin, built in 1702; the law courts, built in 1878–79; and the new university buildings, erected in 1867–70. The university of Rostock was founded in 1418 by the dukes Johann III. and Albrecht V. From 1437 till 1443 it had its seat at Greifswald in consequence of commotions at Rostock; and in 1760 it was again removed—on this occasion to Bützow. The professors appointed by the city, however, still taught there, so that there were practically two universities in the duchy until 1789, when they were reunited at the original seat. In winter 1884–5 the university had a teaching staff of 39, with 265 students; and it possesses a library of 145,000 volumes, various collections and museums, and a number of scientific and literary auxiliary institutions. Rostock is the seat of the supreme court for both the duchies of Mecklenburg, and is well equipped with schools, hospitals, and other institutions. The population in 1810 was 10,979; in 1880 it was 36,967, of whom only 224 were Roman Catholics, and only 221 were Jews; in 1885 it was 39,212.

Although the population, commerce, and wealth of Rostock have all declined since its palmy days as a flourishing Hanse town in the Middle Ages, it has still a very considerable trade, and no Baltic port possesses so large a merchant fleet. In 1882 314 ships, with a total burden of 97,447 tons, were registered as belonging to Rostock; and in 1882 780 ships, with a total burden of 80,578 tons entered, and 724 ships, with a total burden of 82,537 tons, cleared, the port. Ships of more than 200 tons burden must discharge part of their cargo at Warnemünde, at the mouth of the Warnow, the port of Rostock, a fishing village and watering place with 1766 inhabitants, who are distinguished by a peculiar dialect and costume. By far the most important export of Rostock is grain, which goes almost entirely to British ports; but wool, flax, and cattle are also shipped. The chief imports are coal from Great Britain, herrings from Sweden, petroleum from America, timber, wine, and colonial goods. Rostock has an important fair at Whitsuntide, lasting for fourteen days, and also a frequented wool and cattle market. The industries of the town are very varied. One of the chief is shipbuilding, which, however, has declined of late years. Cotton, straw hats, tobacco, carpets, soap, cards, chocolate, and dye-stuffs are among the manufactures of the town, which also contains distilleries, saw-mills, oil-mills, tanneries, and breweries.

Local historians assert that a village existed on the site of Rostock as early as 329 A.D., but no certain proofs have been traced of any earlier community than that founded here by Pribislaw II. in the 12th century, which is said to have received town rights in 1218. The earliest signs of commercial prosperity date from about 1260. For a time Rostock was under the dominion of the kings of Denmark. Soon after returning into the protection of Mecklenburg in 1317, it joined the Hanseatic League; and in fact was one of the original members of the powerful and prosperous Wendish Hansa, in

which it exercised an influence second only to that of Lübeck. The most prosperous epoch of its commercial history began in the latter half of the 15th century, precisely at the period when its political power began to wane. Rostock, however, never entirely lost the independence which it enjoyed as a Hanse town; and in 1788, as the result of long contentions with the rulers of Mecklenburg, it secured for itself a peculiar and liberal municipal constitution, administered by three burgomasters and three chambers. In 1880 this constitution was somewhat modified, and the city became less like a state within a state. The badge of Rostock is the figure 7; and a local rhyme explains that there are 7 doors to St Mary's church, 7 streets from the market place, 7 gates on the landward side and 7 wharves on the seaward side of the town, 7 turrets on the town-house, which has 7 bells, and 7 linden trees in the park.

ROSTOFF, on the Don, is one of those modern towns which have grown up with such remarkable rapidity in South Russia since the definite occupation by the Russians of the Black-Sea coast. In 1731 a small fort was erected on an island in the Don, near its mouth. Thirty years later the fortifications were transferred to the site now occupied by Rostoff, 5 miles above the head of the first branch of the delta of the Don (Mertvyi Donets), and 13 miles above the real head of the delta, the fort being called Dmitri Rostovskiy. Settlers of all nationalities immediately gathered around it, and here within less than a century a city, which in 1881 had 70,700 inhabitants, sprung up, having a mixed population of Great Russians, Ukrainians, Greeks, Germans, Jews, &c. Rostoff stands on the elevated right bank of the Don, and, viewed from the river, looks fairly imposing; but the interior still retains the aspect of a large village.

The Don, which here has a breadth of no more than 230 to 250 yards, with a hardly perceptible current, offers an excellent roadstead. The navigation, however, is considerably impeded by the shallowness of the branches of the river, which are thirty in number at its entrance to the sea, but of which only three (Mertvyi Donets, Kolontcha, and the Don proper) are navigable. During the east winds, however, there is only 4 feet depth of water on the bars of the delta; and ships formerly were often compelled to stay outside for several weeks, waiting for a south-west wind. Recent dredging operations have but partially remedied this evil, and the goods have to be carried on lighters to Taganrog and Mariupol, where they are shipped. In 1882 only forty-one ships of small size coming from foreign countries under the Russian and Turkish flags entered the port, but no fewer than 3175 vessels (349,500 tons), engaged in cabotage or lighter traffic, left the roadstead. The export of corn, oil-seeds, wool, tallow, butter, iron, hides, ropes, coarse linen, pitch, &c., from 12,811,000 roubles in 1865, had risen to 41,634,252 roubles in 1882, while the imports were valued at only 886,120 roubles. The agricultural produce thus exported is drawn from the entire basin of the Don in central Russia, while ores and metals are brought from the Urals. The commercial importance of

Rostoff is further increased by its position on the great highway from Kharkoff and Voronezh to Caucasus, on which traffic has greatly increased since Rostoff became connected by rail with Kharkoff and Voronezh on the one side and Vladikavkaz on the other. Two fairs, one of which has considerable importance for the whole of south-eastern Russia, are yearly held here, with an estimated turnover of about 5,000,000 roubles. Rostoff has also excellent fisheries, and in summer it becomes the gathering place of many thousands of labourers on their way to assist in harvesting operations in the provinces of the Don and in northern Caucasia. The population then exceeds 100,000. The administrative position of Rostoff is quite unique. Along with a territory of 2520 square miles it belongs to the government of Ekaterinoslav, of which it is a district town; but this territory is quite separated from the government, being enclosed by the territory of the Don Cossacks.

ROSTOFF, on Lake Nero, a district town of Russia, in the government of Yaroslavl, and 35 miles by rail south-west of Yaroslavl, is probably the oldest town of north-eastern Russia. Its present importance is due to its fair, which rapidly developed towards the close of last century, and still remains a market where prices of cotton wares are established preliminary to the great fair of Nijni-Novgorod, and where a brisk exchange in various kinds of raw materials and unmanufactured articles is carried on. The specialty of Rostoff is the production of a variety of kitchen-garden produce and apothecary's herbs. Chicory and dried sweet peas are the principal objects of trade; in 1880 350,000 cwts., chiefly of kitchen-garden produce, were exported. Another industry formerly developed in consequence of the great influx of pilgrims—that of painting sacred pictures on a kind of enamel—still continues to flourish. The saddlery and linen manufactures, and the fishing, may likewise be mentioned. The population of Rostoff in 1883 was 12,500.

Rostoff was founded by the Slavonians in territory formerly occupied by the (Finnish) Mera, and it played so prominent a part in the history of that part of Russia that it used to be known as Rostoff the Great. From the beginning of the 11th century to the 18th it was the chief town of the great Rostoff territory, which included large parts of the present governments of Yaroslavl, Vladimir, and Novgorod, and seems to have been a populous city. After the Mongolian invasion it rapidly declined, and in 1474 it was purchased by Ivan III. and annexed to the growing Moscow principality. It was repeatedly plundered by Tartars, Lithuanians, and Poles in the 15th, 16th, and 17th centuries. Its cathedral, built in 1231, still stands, notwithstanding numerous conflagrations; some of the relics it contains are more than eight centuries old. Another church is of still older date, having been built in 1216. Each of its five monasteries has venerated relics of renowned Christian missionaries or Russian princes.
